# Module Catalogue

## Master Advanced Functional Materials (FAME)

### Faculty of Mathematics, Natural Sciences, and Materials Engineering

Prüfungsordnung vom 26.02.2014

---

You can see the other use cases of the modules in Digicampus.

---

## Index by Module Groups

### 1) 1a Basics of Materials Science I

Version 2 (since WS16/17)

PHM-0144: Materials Physics (6 ECTS/LP, Wahlpflicht).....	5
PHM-0110: Materials Chemistry (6 ECTS/LP, Wahlpflicht).....	7

### 2) 1b Basics of Materials Science II

Version 1 (since SoSe15)

PHM-0117: Surfaces and Interfaces (6 ECTS/LP, Wahlpflicht).....	9
---	---

### 3) 2 Methods in Materials Science

Version 9 (since SoSe23)

PHM-0287: Method Course: Spectroscopy of Organic Semiconductors (8 ECTS/LP, Wahlpflicht) * .....	11
PHM-0297: Method Course: Methods in Bioanalytics (8 ECTS/LP, Wahlpflicht) * .....	13
PHM-0298: Method course: From macroscopic to microscopic ferroic properties (8 ECTS/LP, Wahlpflicht).....	15
PHM-0363: Method Course: Applying Theoretical Concepts from Non-equilibrium Statistical Physics (8 ECTS/LP).....	17
PHM-0147: Method Course: Electron Microscopy (8 ECTS/LP, Wahlpflicht) * .....	19
PHM-0146: Method Course: Electronics for Physicists and Materials Scientists (8 ECTS/LP, Wahlpflicht) * .....	22
PHM-0172: Method Course: Functional Silicate-analogous Materials (8 ECTS/LP, Wahlpflicht).....	24
PHM-0148: Method Course: Optical Properties of Solids (8 ECTS/LP, Wahlpflicht).....	26
PHM-0149: Method Course: Methods in Biophysics (8 ECTS/LP, Wahlpflicht).....	28
PHM-0153: Method Course: Magnetic and Superconducting Materials (8 ECTS/LP, Wahlpflicht) * .....	30
PHM-0154: Method Course: Modern Solid State NMR Spectroscopy (8 ECTS/LP, Wahlpflicht).....	32
PHM-0206: Method Course: Infrared Microspectroscopy under Pressure (8 ECTS/LP, Wahlpflicht) * .....	34
PHM-0216: Method Course: Thermal Analysis (8 ECTS/LP, Wahlpflicht).....	36
PHM-0224: Method Course: Theoretical Concepts and Simulation (8 ECTS/LP, Wahlpflicht) * .....	38
PHM-0223: Method Course: Tools for Scientific Computing (8 ECTS/LP, Wahlpflicht) * .....	40
PHM-0258: Method course: Charge doping effects in semiconductors (8 ECTS/LP, Wahlpflicht) * .....	43

---

\* = At least one course for this module is offered in the current semester

PHM-0285: Method Course: Computational Biophysics (8 ECTS/LP, Wahlpflicht) \* .....45

#### **4) 3 Conducting and Presenting Scientific Work**

Version 1 (since SoSe15)

PHM-0158: Introduction to Materials (= Seminar) (4 ECTS/LP, Pflicht) \* ..... 47

PHM-0159: Laboratory Project (10 ECTS/LP, Pflicht).....48

#### **5) 4 Materials Science - Elective Topic**

Version 4 (since WS21/22)

##### **a) Physics of Materials**

Version 4 (since WS21/22)

PHM-0051: Biophysics and Biomaterials (6 ECTS/LP, Wahlpflicht) \* ..... 49

PHM-0160: Dielectric and Optical Materials (6 ECTS/LP, Wahlpflicht)..... 52

PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht) \* ..... 54

PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP, Wahlpflicht) \* ..... 56

PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht) \* ..... 58

PHM-0174: Theoretical Concepts and Simulation (6 ECTS/LP, Wahlpflicht)..... 60

PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (6 ECTS/LP, Wahlpflicht) \* ..... 62

PHM-0056: Ion-Solid Interaction (6 ECTS/LP, Wahlpflicht).....64

PHM-0057: Physics of Thin Films (6 ECTS/LP, Wahlpflicht)..... 66

PHM-0058: Organic Semiconductors (6 ECTS/LP, Wahlpflicht)..... 68

PHM-0060: Low Temperature Physics (6 ECTS/LP, Wahlpflicht)..... 70

PHM-0068: Spintronics (6 ECTS/LP, Wahlpflicht).....72

PHM-0066: Superconductivity (6 ECTS/LP, Wahlpflicht)..... 74

PHM-0069: Applied Magnetic Materials and Methods (6 ECTS/LP, Wahlpflicht)..... 76

PHM-0198: Special Topics in Materials Science (Foreign Institution) (20 ECTS/LP)..... 78

##### **b) Chemistry of Materials**

Version 4 (since WS21/22)

PHM-0054: Chemical Physics II (6 ECTS/LP, Wahlpflicht)..... 79

PHM-0161: Coordination Materials (6 ECTS/LP, Wahlpflicht).....81

PHM-0113: Advanced Solid State Materials (6 ECTS/LP, Wahlpflicht).....83

PHM-0217: Advanced X-ray and Neutron Diffraction Techniques (6 ECTS/LP, Wahlpflicht)..... 85

---

\* = At least one course for this module is offered in the current semester

## Table of Contents

---

PHM-0114: Porous Functional Materials (6 ECTS/LP, Wahlpflicht).....	87
PHM-0167: Oxidation and Corrosion (6 ECTS/LP, Wahlpflicht).....	89
PHM-0198: Special Topics in Materials Science (Foreign Institution) (20 ECTS/LP).....	91
PHM-0218: Novel Methods in Solid State NMR Spectroscopy (6 ECTS/LP, Wahlpflicht).....	92

### **c) Engineering of Materials**

**Version 4 (since WS21/22)**

PHM-0164: Characterization of Composite Materials (6 ECTS/LP, Wahlpflicht).....	93
PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht).....	95
PHM-0165: Introduction to Mechanical Engineering (6 ECTS/LP, Wahlpflicht).....	97
MRM-0052: Functional Polymers (6 ECTS/LP, Wahlpflicht).....	98
PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht).....	100
PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht) *.....	102
PHM-0184: Sustainable Resource Management (6 ECTS/LP, Wahlpflicht).....	104
PHM-0050: Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht).....	106
PHM-0166: Carbon-based functional Materials (Carboterials) (6 ECTS/LP, Wahlpflicht).....	108
PHM-0198: Special Topics in Materials Science (Foreign Institution) (20 ECTS/LP).....	110
PHM-0196: Surfaces and Interfaces II: Joining processes (6 ECTS/LP, Wahlpflicht).....	111

### **6) 6 Finals**

**Version 1 (since SoSe15)**

PHM-0169: Masterthesis (26 ECTS/LP, Pflicht).....	113
PHM-0170: Colloquium (4 ECTS/LP, Pflicht) *.....	114

---

\* = At least one course for this module is offered in the current semester

<b>Module PHM-0144: Materials Physics</b> <i>Materials Physics</i>		6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Helmut Karl		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Electrons in solids</li> <li>• Phonons</li> <li>• Properties of metals, semiconductors and insulators</li> <li>• Application in optical, electronic, and optoelectronic devices</li> <li>• Dielectric solids, optical properties</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students know the basic terms and concepts of solid state physics like the free electron gas, electronic band structure, charge carrier statistics, phonons, doping and optical properties,</li> <li>• are capable to apply derived approximations as the effective mass or the electron-hole concept to describe basic characteristics of semiconductor materials,</li> <li>• have the competence to apply these concepts for the description of electric, electro-optic and thermal properties of solids and to describe their functionalities,</li> <li>• understand size effects on material physical properties.</li> <li>• Integrated acquirement of soft skills: Working with specialist literature, literature search and interdisciplinary thinking.</li> </ul>		
<b>Remarks:</b> compulsory module		
<b>Workload:</b> Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> basic knowledge of solid state physics		
<b>Frequency:</b> each winter semester	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Materials Physics</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3		
<b>Learning Outcome:</b> see module description		

**Contents:**

- Electrons in solids: Free electron gas, band structure, effective mass
- Lattice dynamics: Phonons, phonon dispersion, acoustic and optical phonons
- Properties of metals: Electrical conductivity, Fermi surfaces, thermal properties
- Properties of semiconductors: Pure, intrinsic semiconductors, equilibrium conditions, doping
- Properties of dielectric materials: Propagation of electromagnetic waves, frequency dependent optical properties, polarization effects.
- Application in devices: Heterostructures, Schottky contact, pn-junction, solar cell, light emission and technological aspects

**Literature:**

- Hummel R. E. : Electronic Properties of Materials Springer 2001 (UP1000 H925)
- Burns G.: Solid State Physics Academic Press 1990 (UP1000 B967)
- Ashcroft N. W. , Mermin N.D. : Solid State Physics (UP1000 A 824)
- Kittel C. : Introduction to Solid State Physics (UP1000 K 62)

**Part of the Module: Materials Physics (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Learning Outcome:**

see module description

**Examination**

**Materials Physics**

written exam / length of examination: 90 minutes, graded

**Examination Prerequisites:**

Materials Physics

<b>Module PHM-0110: Materials Chemistry</b> <i>Materials Chemistry</i>		6 ECTS/LP
Version 1.2.0 (since WS09/10) Person responsible for module: Prof. Dr. Henning Höppe		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Revision of basic chemical concepts</li> <li>• Solid state chemical aspects of selected materials, such as <ul style="list-style-type: none"> <li>◦ Thermoelectrics</li> <li>◦ Battery electrode materials, ionic conductors</li> <li>◦ Hydrogen storage materials</li> <li>◦ Data storage materials</li> <li>◦ Phosphors and pigments</li> <li>◦ Heterogeneous catalysis</li> <li>◦ nanoscale materials</li> </ul> </li> </ul>		
<b>Learning Outcomes / Competences:</b> The students will <ul style="list-style-type: none"> <li>• be able to apply basic chemical concepts on materials science problems,</li> <li>• broaden their ability to derive structure-property relations of materials combining their extended knowledge about symmetry-related properties, chemical bonding in solids and chemical properties of selected compound classes,</li> <li>• be able to assess synthetic approaches towards relevant materials,</li> <li>• acquire skills to perform literature research using online data bases.</li> </ul>		
<b>Workload:</b> Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
<b>Conditions:</b> The lecture course is based on the Bachelor in Materials Science courses Chemie I and Chemie III (solid state chemistry).		
<b>Frequency:</b>	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

<b>Parts of the Module</b>
<b>Part of the Module: Materials Chemistry</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3
<b>Learning Outcome:</b> see description of module
<b>Contents:</b> see description of module

**Literature:**

- A. R. West, Solid State Chemistry, John Wiley, Chichester.
- U. Müller, Inorganic Structural Chemistry, Wiley-VCH.
- R. Dronskowski, Computational Chemistry of Solid State Materials, Wiley VCH.
- Textbooks on Basics of Inorganic Chemistry such as J. E. Huheey, E. Keiter, R. Keiter, Anorganische Chemie, de Gruyter, or equivalents.
- Moreover, selected reviews and journal articles will be cited on the slides.

**Part of the Module: Materials Chemistry (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Learning Outcome:**

see description of module

**Contents:**

see description of module

**Literature:**

see associated lecture

**Examination**

**Materials Chemistry**

written exam / length of examination: 90 minutes, graded

**Test Frequency:**

only in the winter semester

**Examination Prerequisites:**

Materials Chemistry

**Description:**

ab dem WiSe 2023/4 wird nur noch die Modulprüfung angeboten, jedoch keine Vorlesung mehr  
from winter term 2023/4 on only the exam will be conducted, but no lecture anymore

<b>Module PHM-0117: Surfaces and Interfaces</b> <i>Surfaces and Interfaces</i>		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Manfred Albrecht		
<p><b>Contents:</b></p> <p>Introduction</p> <ul style="list-style-type: none"> <li>The importance of surfaces and interfaces</li> </ul> <p>Some basic facts from solid state physics</p> <ul style="list-style-type: none"> <li>Crystal lattice and reciprocal lattice</li> <li>Electronic structure of solids</li> <li>Lattice dynamics</li> </ul> <p>Physics at surfaces and interfaces</p> <ul style="list-style-type: none"> <li>Structure of ideal and real surfaces</li> <li>Relaxation and reconstruction</li> <li>Transport (diffusion, electronic) on interfaces</li> <li>Thermodynamics of interfaces</li> <li>Electronic structure of surfaces</li> <li>Chemical reactions on solid state surfaces (catalysis)</li> <li>Interface dominated materials (nano scale materials)</li> </ul> <p>Methods to study chemical composition and electronic structure, application examples</p> <ul style="list-style-type: none"> <li>Scanning electron microscopy</li> <li>Scanning tunneling and scanning force microscopy</li> <li>Auger – electron – spectroscopy</li> <li>Photo electron spectroscopy</li> </ul>		
<p><b>Learning Outcomes / Competences:</b></p> <p>The students:</p> <ul style="list-style-type: none"> <li>have knowledge of the structure, the electronical properties, the thermodynamics, and the chemical reactions on surfaces and interfaces,</li> <li>acquire the skill to solve problems of fundamental research and applied sciences in the field of surface and interface physics,</li> <li>have the competence to solve certain problems autonomously based on the thought physical basics.</li> <li>Integrated acquirement of soft skills.</li> </ul>		
<p><b>Workload:</b></p> <p>Total: 180 h</p> <p>20 h studying of course content using literature (self-study)</p> <p>20 h studying of course content using provided materials (self-study)</p> <p>80 h studying of course content through exercises / case studies (self-study)</p> <p>60 h lecture and exercise course (attendance)</p>		
<p><b>Conditions:</b></p> <p>The module "Physics IV - Solid State Physics" of the Bachelor of Physics / Materials Science program should be completed first.</p>		
<p><b>Frequency:</b> each winter semester</p>	<p><b>Recommended Semester:</b></p>	<p><b>Minimal Duration of the Module:</b> 1 semester[s]</p>
<p><b>Contact Hours:</b> 4</p>	<p><b>Repeat Exams Permitted:</b> according to the examination regulations of the study program</p>	

<p><b>Parts of the Module</b></p>
<p><b>Part of the Module: Surfaces and Interfaces</b></p> <p><b>Mode of Instruction:</b> lecture  <b>Language:</b> English  <b>Frequency:</b> annually  <b>Contact Hours:</b> 3</p>
<p><b>Learning Outcome:</b>  see module description</p>
<p><b>Contents:</b>  see module description</p>
<p><b>Literature:</b></p> <ul style="list-style-type: none"> <li>• Ertl, Küppers: Low Energy Electrons and Surface Chemistry (VCH)</li> <li>• Lüth: Surfaces and Interfaces of Solids (Springer)</li> <li>• Zangwill: Physics at Surfaces (Cambridge)</li> <li>• Feldmann, Mayer: Fundamentals of Surface and thin Film Analysis (North Holland)</li> <li>• Henzler, Göpel: Oberflächenphysik des Festkörpers (Teubner)</li> <li>• Briggs, Seah: Practical Surface Analysis I und II (Wiley)</li> </ul>

<b>Module PHM-0287: Method Course: Spectroscopy of Organic Semiconductors</b> <i>Method Course: Spectroscopy of Organic Semiconductors</i>		8 ECTS/LP
Version 1.2.0 (since SoSe22) Person responsible for module: Prof. Dr. Wolfgang Brütting Dr. Alexander Hofmann		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Growth and characterisation of thin films (vapor deposition, spin coating, surface profiling, atomic force microscopy)</li> <li>• Optical spectroscopy and photophysics (ellipsometry, transmission, steady-state and time-resolved photoluminescence, orientation anisotropy)</li> <li>• Charge transport (space-charge limited current, field-effect mobility, doping)</li> <li>• Light-emitting diodes (different emitter types, device efficiency measurement and simulation)</li> <li>• Solar cells (different device architectures, power and quantum efficiency measurements)</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students <ul style="list-style-type: none"> <li>• get familiar with the preparation of organic semiconductors as thin films and in devices and learn basic spectroscopic techniques to characterise them,</li> <li>• acquire skills to analyse properties of the materials taking into account their specific features,</li> <li>• and have the competence to comprehend and attend to current problems in the field of organic electronics.</li> <li>• Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to critically interpret experimental results.</li> </ul>		
<b>Workload:</b> Total: 240 h		
<b>Conditions:</b> Basic knowledge of atomic and solid state physics, as well as elementary concepts of quantum physics.		<b>Credit Requirements:</b> Bestehen der Modulprüfung
<b>Frequency:</b> each summer semester	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 6	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Method Course: Spectroscopy of Organic Semiconductors</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English / German <b>Contact Hours:</b> 2		
<b>Lehr-/Lernmethoden:</b> The basics for each topic will be taught in class, e.g. using black board and beamer presentation. For some topics, we will use videos for inverted classroom as well.		
<b>Literature:</b> <ul style="list-style-type: none"> <li>• M. Schwoerer, H. Ch. Wolf: Organic Molecular Solids (Wiley-VCH)</li> <li>• A. Köhler, H. Bässler: Electronic Processes in Organic Semiconductors (Wiley-VCH)</li> <li>• S.R. Forrest: Organic Electronics (Oxford Univ. Press)</li> </ul>		
<b>Assigned Courses:</b> <b>Method Course: Spectroscopy of Organic Semiconductors</b> (lecture)		

\*\*

**Part of the Module: Method Course: Spectroscopy of Organic Semiconductors (Practical Course)**

**Mode of Instruction:** internship

**Language:** English / German

**Contact Hours:** 4

**Lehr-/Lernmethoden:**

After teaching in class, the students will go to the lab to get practical experience with each topic and acquire/analyze their own data.

**Assigned Courses:**

**Method Course: Spectroscopy of Organic Semiconductors (Practical Course)** (internship)

\*\*

**Examination**

**Method Course: Spectroscopy of Organic Semiconductors**

report, graded

**Test Frequency:**

when a course is offered

<b>Module PHM-0297: Method Course: Methods in Bioanalytics</b> <i>Method Course: Methods in Bioanalytics</i>		8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. Janina Bahnemann		
<b>Contents:</b> <ul style="list-style-type: none"> <li>- Basic concepts of instrumental analytics, sensor technology, validation, quality assurance</li> <li>- Biological basics for sensor design and sample components</li> <li>- Biological markers, biomaterials and targets: bioreceptors: antibodies, enzymes, aptamers, cells, nanoparticles</li> <li>- Sensor principles / transducers: optical, thermal, electrochemical, electromechanical, colorimetric</li> <li>- Sensor materials (e.g., silicon, gold, plastics, polymers)</li> <li>- Immobilization of bioreceptors on sensor materials</li> <li>- Lateral flow assays, Point-of-Care diagnostics</li> <li>- Carbohydrate and lipid analysis: Chromatographic methods (HPLC, GC, DC, MS)</li> <li>- Amino acid analytics: HPLC, fluorescence spectroscopy</li> <li>- Nucleic acid analytics: PCR method, sequencing, electrophoresis, microarrays</li> <li>- Protein analytics: Chromatography, electrophoresis, spectroscopy, Bradford assay</li> <li>- Cell analytics: Flow cytometry and microscopy</li> <li>- Concepts and materials for sensor development and optimization: e.g., Microfluidics, additive manufacturing, nanoporous materials, nanoparticles, amplifiers</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• Students will be able to use acquired analytical expertise to adequately describe and correlate basic principles of bioanalysis and their applications.</li> <li>• Students will be able to transfer acquired knowledge from the lecture to practical applications in the experimental practical course.</li> <li>• Students will demonstrate self-competence of work organization as well as social competence by working in small groups.</li> <li>• Students will learn to identify proteins using various analytical methods, to set up biosensors for measuring glucose concentrations, and to scientifically evaluate, comprehensibly record in writing, and present the practical results.</li> </ul>		
<b>Remarks:</b> ELECTIVE COMPULSORY MODULE Number of students will be limited to 9.		
<b>Workload:</b> Total: 240 h		
<b>Conditions:</b> keine / none		<b>Credit Requirements:</b> Practical work and written report
<b>Frequency:</b> each semester	<b>Recommended Semester:</b> 1. - 4.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 6	<b>Repeat Exams Permitted:</b> none

report, Practical work and written report on practical work, graded

<b>Module PHM-0298: Method course: From macroscopic to microscopic ferroic properties</b> <i>Method course: From macroscopic to microscopic ferroic properties</i>		8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. István Kézsmárki		
<p><b>Contents:</b></p> <p>Within this course, the students will learn the basic concepts of ferroic properties, e.g. ferroelectricity and ferromagnetism, which play a key role in materials science and engineering, at cryogenic temperatures. This method course will teach the students to understand and perform experiments on ferroic materials first, on a macroscopic scale and, after having a fundamental understanding, microscopic measurements. Therefore, the students will be taught in preparing single crystals, planning complex measurement procedures, and evaluating the measured data.</p> <p>Magnetic Properties will be investigated via:</p> <ul style="list-style-type: none"> <li>• Magnetization measurements</li> <li>• Susceptibility measurements</li> <li>• Magnetic force microscopy (MFM)</li> </ul> <p>Electric Properties will be investigated via:</p> <ul style="list-style-type: none"> <li>• Linear and non-linear dielectric spectroscopy</li> <li>• SEM / EDX</li> <li>• Polarization measurements</li> <li>• Conductive atomic force microscopy (cAFM) / piezo force microscopy (PFM)</li> </ul>		
<p><b>Learning Outcomes / Competences:</b></p> <ul style="list-style-type: none"> <li>• fundamental knowledge of properties in electric and magnetic materials</li> <li>• instruction in experimental methods for investigation of ferroic properties of condensed matter</li> <li>• perform experiments at cryogenic temperatures</li> <li>• trained in planning and performing complex experiments</li> <li>• learn to evaluate and analyze the collected data</li> <li>• combining knowledge of macroscopic measurements to understand microscopic data to fully understand electric and magnetic properties</li> </ul>		
<p><b>Remarks:</b> ELECTIVE COMPULSORY MODULES</p>		
<p><b>Workload:</b> Total: 240 h</p>		
<p><b>Conditions:</b> Recommended: basic knowledge in solid state physics and ferroic properties</p>		<p><b>Credit Requirements:</b> Participation in laboratory course and oral examination.</p>
<p><b>Frequency:</b> each semester</p>	<p><b>Recommended Semester:</b></p>	<p><b>Minimal Duration of the Module:</b> 1 semester[s]</p>
<p><b>Contact Hours:</b> 6</p>	<p><b>Repeat Exams Permitted:</b> according to the examination regulations of the study program</p>	
<p><b>Parts of the Module</b></p>		
<p><b>Part of the Module: Method course: From macroscopic to microscopic ferroic properties</b> <b>Language:</b> English <b>Contact Hours:</b> 2</p>

- Ch. Kittel, Einführung in die Festkörperphysik (Oldenbourg)
- V. K. Wadhawan, Introduction to ferroic materials (CRC Press)
- S. Kalinin, A. Gruverman, Scanning Probe Microscopy - Electrical and electromechanical phenomena at the nanoscale (Springer)
- A. K. Tagantsev, Domains in Ferroic Crystals and Thin films (Springer)

**Part of the Module: Method course: From macroscopic to microscopic ferroic properties (Practical Course)**

**Language:** English

**Contact Hours:** 4

**Examination**

**Method course: From macroscopic to microscopic ferroic properties**

oral exam / length of examination: 45 minutes, graded

<b>Module PHM-0363: Method Course: Applying Theoretical Concepts from Non-equilibrium Statistical Physics</b> <i>Method Course: Applying Theoretical Concepts from Non-equilibrium Statistical Physics</i>	8 ECTS/LP
Version 1.0.0 (since WS23/24) Person responsible for module: Prof. Dr. Christoph Alexander Weber	
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Phase separation kinetics of liquid mixtures</li> <li>• Dynamics of simple fluids</li> <li>• Kinetics of semi-dilute, elastic, and inelastic gases</li> <li>• Self-propelled, aligning gases</li> <li>• Motility-induced phase separation</li> <li>• Long-range polar order in two-dimensional active systems</li> <li>• Active Brownian motion</li> <li>• Mixtures of hot and cold particles</li> <li>• Stochastic chemical reaction kinetics at non-dilute conditions</li> </ul>	
<b>Learning Outcomes / Competences:</b> Students will learn the following hard skills: <ul style="list-style-type: none"> <li>• fundamental non-equilibrium theories (hydrodynamic transport theories, kinetic theories, dynamic density functional theory, stochastic descriptions, and Ito's stochastic calculus)</li> <li>• coarse-graining methods (lattice-based, moment expansion, Mori-Zwanzig, ...)</li> <li>• analytical techniques (stability analysis, partial equilibria, multi-scale perturbation theories)</li> <li>• simulations techniques (lattice gas automaton, Monte-Carlo, agent-based, stochastic particle dynamics, stochastic rotational dynamics, ...),</li> <li>• discretization methods (Gillespie, spectral method, finite differences, finite elements)</li> <li>• programming in Python and/or C++</li> </ul> Students will learn the following soft skills: <ul style="list-style-type: none"> <li>• Students learn how to apply theoretical concepts from non-equilibrium thermodynamics</li> <li>• They get trained to establish links between theoretical concepts and modern research problems</li> <li>• They will build links between lecture and textbook knowledge and applied research question, providing excellent preparation for Master's and Ph.D. research in theoretical physics</li> <li>• Students learn how to work in teams</li> <li>• They get trained in autonomous working with scientific literature in English, improving written and spoken English during lectures and exercises,</li> <li>• Students get stimulated to develop interdisciplinary thinking, and working</li> </ul>	
<b>Remarks:</b> It may be helpful if the students have participated or are simultaneously participating in one of the following Master's courses: "Non-equilibrium Statistical Physics" and "Introduction to Stochastic Processes". Please note that this is not a prerequisite since there will be introductory lectures before the application sessions.	
<b>Workload:</b> Total: 240 h 60 h studying of course content (self-study) 60 h studying of course content through exercises / case studies (self-study) 90 h lecture and exercise course (attendance) 30 h exam preparation (self-study)	
<b>Conditions:</b> Pronounced interest in theoretical physics and Statistical Physics	<b>Credit Requirements:</b> Bestehen der Modulprüfung

<b>Frequency:</b> each winter semester	<b>Recommended Semester:</b>	<b>Minimal Duration of the Module:</b> semester[s]

<b>Parts of the Module</b>		
<b>Part of the Module: Method Course: Electron Microscopy</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 2		

**Contents:**

SEM:

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

TEM:

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM

<b>Parts of the Module</b>		
<b>Part of the Module: Method Course: Functional Silicate-analogous Materials (Practical Course)</b> <b>Mode of Instruction:</b> laboratory course <b>Language:</b> English <b>Contact Hours:</b> 6		

**Learning Outcome:**

The students will know how to:

- develop functional materials based on silicate-analogous materials,
- apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),
- work under non-ambient atmospheres (e.g. reducing, inert conditions),
- solve and refine crystal structures from single-crystal data,
- describe and classify these structures properly.

**Contents:**

Synthesis and characterization of functional materials according to the topics:

1. Silicate-analogous compounds
2. Luminescent materials / phosphors
3. Pigments
4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis

**Examination**

**Method Course: Functional Silicate-analogous Materials**

seminar, graded

**Examination Prerequisites:**

Method Course: Functional Silicate-analogous Materials

<b>Module PHM-0148: Method Course: Optical Properties of Solids</b> <i>Method Course: Optical Properties of Solids</i>		8 ECTS/LP
Version 1.4.0 (since SoSe15) Person responsible for module: Prof. Dr. Joachim Deisenhofer		
<b>Contents:</b> Electrodynamics of solids <ul style="list-style-type: none"> <li>• Maxwell equations</li> <li>• Electromagnetic waves</li> <li>• Refraction and interference, Fresnel equations</li> </ul> FTIR spectroscopy <ul style="list-style-type: none"> <li>• Fourier transformation</li> <li>• Michelson-Morley and Genzel interferometer</li> <li>• Sources and detectors</li> </ul> Terahertz Time Domain spectroscopy <ul style="list-style-type: none"> <li>• Generation of pulsed THz radiation</li> <li>• Gated detection, Austin switches</li> </ul> Elementary excitations in solid materials <ul style="list-style-type: none"> <li>• Rotational-vibrational bands</li> <li>• Infrared-active phonons</li> <li>• Interband excitations</li> <li>• Crystal-field excitations</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students know the basic principles of far-infrared spectroscopy and terahertz time-domain-spectroscopy,</li> <li>• The students know about fundamental optical excitations in condensed matter materials that can be studied by these spectroscopic methods,</li> <li>• The students obtain the competence to plan and carry out complex experiments,</li> <li>• The students have the skills to evaluate and analyze optical data.</li> <li>• The students acquire scientific skills to search for scientific literature and to evaluate scientific content.</li> </ul>		
<b>Remarks:</b>		
<b>Workload:</b> Total: 240 h 30 h studying of course content using provided materials (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study) 90 h lecture and exercise course (attendance)		
<b>Conditions:</b> Recommended: basic knowledge in solid-state physics, basic knowledge in electrodynamics and optics		<b>Credit Requirements:</b> written report
<b>Frequency:</b> each semester	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]

**Examination**

**Method Course: Theoretical Concepts and Simulation**

report / work period for assignment: 4 weeks, graded

**Description:**

The requirement for the credit points is based on a programming project carried out in a team of 2-3 students. The final report contains the formulation and a theoretical introduction into the problem, the numerical implementation, and the presentation of the results.

<b>Module PHM-0223: Method Course: Tools for Scientific Computing</b> <i>Method Course: Tools for Scientific Computing</i>	8 ECTS/LP
Version 1.6.0 (since SoSe18) Person responsible for module: Prof. Dr. Gert-Ludwig Ingold	
<b>Contents:</b> Important tools for scientific computing are taught in this module and applied to specific scientific problems by the students. As far as tools depend on a particular programming language, Python will be employed. Tools to be discussed include: <ul style="list-style-type: none"> <li>• numerical libraries like NumPy and SciPy</li> <li>• visualisation of numerical results</li> <li>• use of a version control system like git and its application in collaborative work</li> <li>• testing of code</li> <li>• profiling</li> <li>• documentation of programs</li> </ul>	
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students are capable of solving a physical problem of some complexity by means of numerical techniques. They are able to visualize the results and to adequately document their program code.</li> <li>• The students know examples of numerical libraries and are able to apply them to solve scientific problems.</li> <li>• The students know methods for quality assurance like the use of unit tests and can apply them to their code. They know techniques to identify run-time problems.</li> <li>• The students know a distributed version control system and are able to use it in a practical problem.</li> <li>• The students have gained practical experience in a collaborative project work. They are able to plan and carry out a programming project in a small group.</li> <li>• The students understand the relevance of the tools taught in the method course for good scientific practice.</li> </ul>	
<b>Remarks:</b> The number of students will be limited to 12.	
<b>Workload:</b> Total: 240 h 60 h studying of course content (self-study) 90 h (attendance) 30 h preparation of presentations (self-study) 60 h preparation of written term papers (self-study)	
<b>Conditions:</b> Knowledge of the programming language Python is expected on the level taught in the module PHM-0295 "Einführung in Prinzipien der Programmierung".	<b>Credit Requirements:</b> The module examination needs to be passed which is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

<b>Frequency:</b> irregular	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 6	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

**Parts of the Module****Part of the Module: Method Course: Tools for Scientific Computing****Mode of Instruction:** lecture**Language:** English / German**Contact Hours:** 2**Learning Outcome:**

- The students know the numerical libraries NumPy and SciPy and selected tools for the visualization of numerical results.
- The students know fundamental techniques for the quality assurance of programs like the use of unit tests, profiling and the use of the version control system git. They are able to adequately document their code.
- The students understand the relevance of the tools taught in the method course for good scientific practice.

**Contents:**

- numerical libraries NumPy and SciPy
- graphics with matplotlib
- version control system Git and workflow for Gitlab/Github
- unit tests
- profiling
- documentation using docstrings and Sphinx

**Literature:**

- A. Scopatz, K. D. Huff, *Effective Computation in Physics* (O'Reilly, 2015)
- lecture notes are freely available at <https://gertingold.github.io/tools4scicomp>

**Assigned Courses:****Method Course: Tools for Scientific Computing** (lecture)

\*\*

**Part of the Module: Method Course: Tools for Scientific Computing (Practical Course)****Mode of Instruction:** internship**Language:** English / German**Contact Hours:** 4**Learning Outcome:**

- The students are capable of solving a physical problem of some complexity by means of numerical techniques and to visualize the results.
- They have gained some experience in the application of methods for quality assurance of their code and are able to appropriately document their programs.
- The students are able to work in a team and know how to make use of tools like Gitlab/Github.
- The students are able to present the status of their work, to critically assess it and to accept suggestions from others.

**Contents:**

The tools discussed in the lecture will be applied to specific scientific problems by small teams of 2-3 students under supervision. The teams regularly inform the other teams in oral presentations on their progress, the tools employed as well as encountered problems and their solution.

### Examination

#### **Method Course: Tools for Scientific Computing**

report / work period for assignment: 4 weeks, graded

#### **Test Frequency:**

when a course is offered

#### **Description:**

The requirement for credit points is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

<b>Module PHM-0258: Method course: Charge doping effects in semiconductors</b> <i>Method course: Charge doping effects in semiconductors</i>		8 ECTS/LP
Version 1.0.0 (since SoSe21) Person responsible for module: Prof. Dr. István Kézsmárki Dr. Lilian Prodan, Dr. Somnath Ghara		
<b>Contents:</b> The goal of the method course is to make students familiar with the concept of controlling the type and the concentration of charge carriers in semiconductors, which is widely used approach in electronics and various fields of materials science. For this purpose, the current method course will be dealing with the preparation of various electron-doped and / or hole-doped narrow-gap semiconductors and investigation of the influence of charge doping on transport and magnetic properties. The following techniques will be involved: <ul style="list-style-type: none"> <li>• Synthesis of electron and hole doped narrow-gap semiconductors, such as Zn- and Ge-doped GaV4S8, in polycrystalline forms using solid state reaction;</li> <li>• Refining the structure and checking phase purity by X-ray powder diffraction;</li> <li>• Resistivity and magneto-transport measurements;</li> <li>• Hall effect measurements to quantify carrier concentration;</li> <li>• Investigation of the doping-induced changes in the magnetic properties by magnetization measurements.</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students gain basic knowledge how to tailor the bulk properties of narrow-gap semiconductors via different doping techniques.</li> <li>• The students have detailed knowledge in performing XRD and magnetization experiments and know how to analyze the data.</li> <li>• The students acquire the competence to plan and perform Hall effect and magnetoresistance experiments and evaluate the obtained experimental results.</li> <li>• The students have the skill to distinguish between an n-type and p-type semiconductor.</li> <li>• The students know how to calculate the charge, mobility, and charge carrier density of a semiconductor using information obtained from the Hall effect experiments.</li> </ul>		
<b>Remarks:</b> ELECTIVE COMPULSORY MODULES		
<b>Workload:</b> Total: 240 h		
<b>Conditions:</b> Recommended: basic knowledge in solid state physics and semiconductors;		<b>Credit Requirements:</b> Written report on the experiments (editing time 2 weeks)

<b>Module PHM-0285: Method Course: Computational Biophysics</b> <i>Method Course: Computational Biophysics</i>		8 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. Dr. Nadine Schwierz-Neumann		
<b>Contents:</b> Life relies on the interactions of proteins, nucleic acids, lipids and other biomolecules. This course introduces computational methods to study the structure, dynamics and mechanics of these biomolecules. In the first part of the course, the physics behind biomolecular simulations is explained and the basic principles of classical and statistical mechanics are reviewed. In the second part, different simulation techniques are introduced including molecular dynamics simulations and Monte Carlo simulations. Subsequently the methods are applied to biological systems consisting of proteins, nucleic acids and lipids		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• Students develop an active understanding of the principles, the capacity and limitations of biomolecular simulations</li> <li>• Students learn to solve typical biophysical problems analytically and numerically</li> <li>• Students learn how to run and analyze computer simulations of biological matter</li> <li>• Students learn to visualize, document and present their simulation results</li> </ul>		
<b>Remarks:</b> Number of students will be limited to 15.		
<b>Workload:</b> Total: 240 h 90 h exam preparation (self-study) 60 h studying of course content (self-study) 90 h (attendance)		
<b>Conditions:</b> Knowledge of classical mechanics on the bachelor level is expected.		<b>Credit Requirements:</b> Passing of the module exam
<b>Frequency:</b> every 4th semester ab SoSe2022	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 6	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Method Course: Computational Biophysics</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English / German <b>Contact Hours:</b> 2		
<b>Learning Outcome:</b> <ul style="list-style-type: none"> <li>• Theoretical background of biomolecular simulations</li> <li>• Computational methods to describe the structure, dynamics and mechanics of biomolecules</li> </ul>		

**Contents:**

- Introduction to classical mechanics in phase space
- Probability and information theory
- Connection to statistical mechanics
- Molecular dynamics basics
- Monte Carlo Simulations
- Forces and force fields in biomolecular systems
- Simulations in different ensembles
- Calculating macroscopic thermodynamic properties from simulations

**Literature:**

- Daniel M. Zuckerman, *Statistical Physics of Biomolecules* (2010 by Taylor and Francis Inc.)
- Ken Dill and Sarina Bromberg, *Molecular Driving Forces* (2012 by Taylor and Francis Inc; 2nd edition)
- Daan Frenkel and Berend Smit, *Understanding Molecular Simulation* (2002 by Elsevier, 2nd edition)

**Assigned Courses:**

**Method Course: Computational Biophysics** (lecture)

\*\*

**Part of the Module: Method Course: Computational Biophysics (Practical Course)**

**Mode of Instruction:** internship

**Language:** English / German

**Contact Hours:** 4

**Learning Outcome:**

- Students learn to solve typical biophysical problems analytically and numerically
- Students learn to run and analyze computer simulations of biological matter
- Students learn to visualization, documentation and presentation of results

**Contents:**

The methods and tools discussed in the lecture will be applied to typical biophysical problems and biological systems. The students work individually or in small teams under supervision. The students present their solutions, document their simulations and summarize their results in a final report.

**Assigned Courses:**

**Method Course: Computational Biophysics (Practical Course)** (internship)

**Learning Outcome:**

See module description.

**Contents:**

- Radiation Biophysics
  - Radiation sources
  - Interaction of radiation with biological matter
  - Radiation protection principles
  - Low dose radiation
  - LNT model in radiation biophysics
- Microfluidics
  - Life at Low Reynolds Numbers
  - The Navier-Stokes Equation
  - Low Reynolds Numbers – The Stokes Equation
  - Breaking the Symmetry
- Membranes
  - Thermodynamics and Fluctuations
  - Thermodynamics of Interfaces
  - Phase Transitions – 2 state model
  - Lipid membranes and biological membranes, membrane elasticity
- Membranal transport
  - Random walk, friction and diffusion
  - Transmembranal ionic transport and ion channels
  - Electrophysiology of cells
  - Neuronal Dynamics

- Davies: The Physics of low-dimensional Semiconductors (Cambridge University Press)

**Assigned Courses:**

**Nanostructures / Nanophysics** (lecture)

*\*(online/digital) \**

**Examination**

**Nanostructures / Nanophysics**

oral exam / length of examination: 30 minutes, graded

**Examination Prerequisites:**

Nanostructures / Nanophysics

<b>Module PHM-0174: Theoretical Concepts and Simulation</b> <i>Theoretical Concepts and Simulation</i>		6 ECTS/LP
Version 1.1.0 (since WS09/10) Person responsible for module: Prof. Dr. Liviu Chioncel		
<b>Contents:</b> <ol style="list-style-type: none"> <li>1. Introduction: operating systems, programming languages, data visualization tools</li> <li>2. Basic numerical methods: interpolation, integration</li> <li>3. Ordinary and Partial Differential Equations (e.g., diffusion equation, Schrödinger equation)</li> <li>4. Concepts in atomistic materials modelling</li> <li>5. Simulation of material's properties (molecular spectroscopy, magnetism)</li> </ol>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the principal concepts of the numerical methods relevant in material science,</li> <li>• are able to solve simple problems numerically. They are able to write the codes and to present the results,</li> <li>• are able to choose the adequate levels of description and approximations for a given problem and apply the corresponding methods,</li> <li>• have the expertise to judge the quality and validity of the numerical results,</li> <li>• Integrated acquirement of soft skills: independent handling of hard- and software while using English documentations, ability to investigate abstract circumstances with the help of a computer and to present the results in written and oral form, capacity for teamwork.</li> </ul>		
<b>Remarks:</b> Links to exemplary software related to the course: <ul style="list-style-type: none"> <li>• <a href="http://www.bloodshed.net/">http://www.bloodshed.net/</a></li> <li>• <a href="http://www.cplusplus.com/doc/tutorial/">http://www.cplusplus.com/doc/tutorial/</a></li> <li>• <a href="http://www.cygwin.com/">http://www.cygwin.com/</a></li> <li>• <a href="http://avogadro.cc/">http://avogadro.cc/</a></li> <li>• <a href="http://orcaforum.kofo.mpg.de/app.php/portal">http://orcaforum.kofo.mpg.de/app.php/portal</a></li> </ul>		
<b>Workload:</b> Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study)		
<b>Conditions:</b> Recommended: basic knowledge of quantum mechanics, thermodynamics, and numerical methods as well as of a programming language		<b>Credit Requirements:</b> project work in small groups, including a written summary of the results (ca. 10-20 pages) as well as an oral presentation
<b>Frequency:</b> each summer semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program

<b>Module PHM-0198: Special Topics in Materials Science (Foreign Institution)</b> <i>Special Topics in Materials Science (Foreign Institution)</i>		20 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Ferdinand Haider		
<b>Conditions:</b> studies at an international partner institution		<b>Credit Requirements:</b> written exam, oral exam, report, etc.
<b>Frequency:</b> each semester	<b>Recommended Semester:</b>	<b>Minimal Duration of the Module:</b> semester[s]
	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Special Topics in Materials Science (Foreign Institution)</b> <b>Language:</b> English		
<b>Examination</b> <b>Special Topics in Materials Science (Foreign Institution)</b> module exam, written exam, oral exam, report, etc., graded <b>Examination Prerequisites:</b> Special Topics in Materials Science (Foreign Institution)		

<b>Module PHM-0054: Chemical Physics II</b> <i>Chemical Physics II</i>		6 ECTS/LP
Version 1.4.0 (since WS09/10 to WS22/23) Person responsible for module: Prof. Dr. Wolfgang Scherer PD Dr. Georg Eickerling		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Introduction to computational chemistry</li> <li>• Hartree-Fock Theory</li> <li>• DFT in a nutshell</li> <li>• Prediction of reaction mechanisms</li> <li>• calculation of physical and chemical properties</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the basic quantum chemical methods of chemical physics to interpret the electronic structures in molecules and solid-state compounds,</li> <li>• have therefore the competence to autonomously perform simple quantum chemical calculations using Hartree-Fock and Density Functional Theory (DFT) and to interpret the electronic structure of functional molecules and materials with regard to their chemical and physical properties</li> <li>• Integrated acquirement of soft skills: ability to specialize in a scientific topic and to apply the acquired knowledge for solving scientific problems.</li> </ul>		
<b>Remarks:</b> It is possible for students to do quantum chemical calculations autonomously and analyze electronic structures of molecules on a computer cluster within the scope of the tutorial.		
<b>Workload:</b> Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study)		
<b>Conditions:</b> It is highly recommended to complete the module Chemical Physics I first.		
<b>Frequency:</b> each summer semester not in summer term 23	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Chemical Physics II</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3

<b>Module PHM-0168: Modern Metallic Materials</b> <i>Modern Metallic Materials</i>		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider		
<b>Contents:</b> Introduction Review of physical metallurgy Steels: <ul style="list-style-type: none"> <li>• principles</li> <li>• common alloying elements</li> <li>• martensitic transformations</li> <li>• dual phase steels</li> <li>• TRIP and TWIP steels</li> <li>• maraging steel</li> <li>• electrical steel</li> <li>• production and processing</li> </ul> Aluminium alloys: <ul style="list-style-type: none"> <li>• 2xxx</li> <li>• 6xxx</li> <li>• 7xxx</li> <li>• Processing – creep forming, hydroforming, spinforming</li> </ul> Titanium alloys Magnesium alloys Superalloys Intermetallics, high entropy alloys		
<b>Learning Outcomes / Competences:</b> Students <ul style="list-style-type: none"> <li>• learn about relevant classes of actual metallic alloys and their properties</li> <li>• acquire the skill to derive alloy properties from physical metallurgy principles and concepts</li> <li>• have the competence to choose and to explain appropriate metallic materials for special applications</li> </ul>		
<b>Remarks:</b> Scheduled every second summer semester.		
<b>Workload:</b> Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
<b>Conditions:</b> Recommended: Knowledge of physical metallurgy and physical chemistry		
<b>Frequency:</b> each summer semester alternating with PHM-0167	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

**Parts of the Module**

**Part of the Module: Modern Metallic Materials**

**Mode of Instruction:** lecture

**Language:** English

**Contact Hours:** 4

**Literature:**

Cahn-Haasen-Kramer: Materials Science and Technology

Original literature

**Assigned Courses:**

**Modern Metallic Materials** (lecture)

\*\*

**Examination**

**Modern Metallic Materials**

written exam / length of examination: 90 minutes, graded

**Examination Prerequisites:**

Modern Metallic Materials

<b>Module PHM-0184: Sustainable Resource Management</b> <i>Sustainable Resource Management</i>		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Armin Reller		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students know the basics of geographic distribution and the technical relevancy of different resources like energy sources and metals.</li> <li>• Furthermore, the students know risk management methods, which are used to identify, measure and manage resource price risks. For this purpose, resource scarcity indicators, risk measures and instruments for risk protection are being presented, which enable the students to make economically well-grounded decisions in dealing with resources.</li> <li>• Moreover, the students know how resource-based strategies with the help of environmental management contribute to environmental risk management. All topics are being illustrated with examples (from practical projects).</li> </ul>		
<b>Remarks:</b> Elective Module		
<b>Workload:</b> Total: 180 h 140 h studying of course content using provided materials (self-study) 40 h seminar (attendance)		
<b>Conditions:</b> none		<b>Credit Requirements:</b> 1 written report on selected questions of sustainable resource management (number of pages: approx. 15 - 20; editing time 2 weeks), oral presentation (30 minutes), compulsory attendance (40 hours)
<b>Frequency:</b> irregular (usu. summer semester)	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

<b>Parts of the Module</b>
<b>Part of the Module: Sustainable Resource Management</b> <b>Mode of Instruction:</b> seminar <b>Lecturers:</b> Prof. Dr. Armin Reller <b>Language:</b> English <b>Frequency:</b> each summer semester <b>Contact Hours:</b> 2 <b>ECTS Credits:</b> 4.0

<p><b>Contents:</b></p> <ol style="list-style-type: none"> <li>1. Introduction (global resource consumption)</li> <li>2. Overview of resource types</li> <li>3. Definition of mineral resources</li> <li>4. Introduction to resource management</li> <li>5. Identification of resource price risks</li> <li>6. Measurement of resource price risks</li> <li>7. Management of resource price risks</li> <li>8. Introduction in basics of environmental management</li> <li>9. Corporate environmental management</li> <li>10. Economical closed-loop systems</li> </ol>
<p><b>Lehr-/Lernmethoden:</b></p> <p>seminar</p> <p>media and methods: slides / blackboard with the help of other media</p>
<p><b>Literature:</b></p> <ul style="list-style-type: none"> <li>• Holger Rogall: Nachhaltige Ökonomie, Metropolis, Marburg, 2009.</li> <li>• Hans-Dieter Haas, Dieter Matthew Schlesinger: Umweltökonomie und Res-sourcenmanagement, Wissenschaftliche Buchgesellschaft, Darmstadt, 2007.</li> <li>• Colin W. Clark: Mathematical Bioeconomics, Wiley, New York, 1976.</li> <li>• Werner Gocht: Handbuch der Metallmärkte, 2. Aufl., Springer, New York / Tokyo, 1985.</li> </ul>
<p><b>Part of the Module: Sustainable Resource Management (Tutorial)</b></p> <p><b>Mode of Instruction:</b> exercise course</p> <p><b>Lecturers:</b> Prof. Dr. Armin Reller</p> <p><b>Language:</b> English</p> <p><b>Frequency:</b> each summer semester</p> <p><b>Contact Hours:</b> 2</p> <p><b>ECTS Credits:</b> 2.0</p>

<p><b>Examination</b></p> <p><b>Sustainable Resource Management</b></p> <p>seminar, graded</p> <p><b>Examination Prerequisites:</b></p> <p>Sustainable Resource Management</p> <p><b>Description:</b></p> <p>1 written report (number of pages: approx. 15 - 20; editing time 2 weeks), oral presentation (30 minutes), compulsory attendance (40 hours)</p>

<b>Module PHM-0050: Electronics for Physicists and Materials Scientists</b> <i>Electronics for Physicists and Materials Scientists</i>		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Andreas Hörner		
<b>Contents:</b> <ol style="list-style-type: none"> <li>1. Basics in electronic and electrical engineering</li> <li>2. Quadrupole theory</li> <li>3. Analog technique, transistor and opamp circuits</li> <li>4. Boolean algebra and logic</li> <li>5. Digital electronics and calculation circuits</li> <li>6. Microprocessors and Networks</li> <li>7. Basics in Electronic</li> <li>8. Implementation of transistors</li> <li>9. Operational amplifiers</li> <li>10. Digital electronics</li> </ol>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the Lab,</li> <li>• have skills in easy circuit design, measuring and control technology, analog and digital electronics,</li> <li>• have expertise in independent working on circuit problems. They can calculate and develop easy circuits.</li> <li>• Integrated acquirement of soft skills: autonomous working with specialist literature in English, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.</li> </ul>		
<b>Workload:</b> Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
<b>Conditions:</b> none		
<b>Frequency:</b> each semester	<b>Recommended Semester:</b> from 3.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Electronics for Physicists and Materials Scientists</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 4		
<b>Learning Outcome:</b> see module description		
<b>Contents:</b> see module description		

**Literature:**

- Paul Horowitz: The Art of Electronics (Cambridge University Press)
- National Instruments: MultiSim software package (available in the lecture)

**Examination**

**Electronics for Physicists and Materials Scientists**

oral exam / length of examination: 30 minutes, graded

**Examination Prerequisites:**

Electronics for Physicists and Materials Scientists

<b>Module PHM-0166: Carbon-based functional Materials (Carboterials)</b> <i>Carbon-based functional Materials (Carboterials)</i>		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
<b>Contents:</b> <ol style="list-style-type: none"> <li>1. Introduction to carbon allotropes and porous carbon materials [4]</li> <li>2. Physical properties of fullerenes, carbon nanotubes and graphene [4]</li> <li>3. Solid state NMR spectroscopy of carbon materials [4]</li> <li>4. Metal carbides [4]</li> <li>5. Carbon thin films and coatings [4]</li> <li>6. Manufacturing and processing technology of carbon fibres [4]</li> <li>7. Carbon-fibre reinforced polymer composites [4]</li> <li>8. Carbon-fibre reinforced aluminium (Metal Matrix Composites, MMC) [4]</li> <li>9. Energy storage in carbon materials [4]</li> <li>10. Carbon-based materials for opto-electronics [4]</li> <li>11. Quantum transport phenomena relating to carbon materials [4]</li> <li>12. a) Manipulating heat flow with carbon-based electronic analogs: phononics in place of electronics [2]</li> <li>12. b) Carbon-based spintronics [2]</li> <li>13. Fabrication and processing of carbon-based nanostructures [4]</li> </ol>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the basics of the chemistry and physics of carbon materials and their applications,</li> <li>• acquire knowledge about the structural characterization, physical properties and engineering of functional materials and carbon based devices,</li> <li>• learn to work with specialist literature in english.</li> </ul>		
<b>Workload:</b> Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> none		
<b>Frequency:</b> each summer semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

---

**Parts of the Module**

**Part of the Module: Carbon-based functional Materials (Carboterials)**

**Mode of Instruction:** lecture

**Language:** English

**Contact Hours:** 4

**Literature:**

will be announced by the lecturers

**Examination**

**Carbon-based functional Materials (Carboterials)**

written exam / length of examination: 120 minutes, graded

**Examination Prerequisites:**

Carbon-based functional Materials (Carboterials)

<b>Module PHM-0198: Special Topics in Materials Science (Foreign Institution)</b> <i>Special Topics in Materials Science (Foreign Institution)</i>		20 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Ferdinand Haider		
<b>Conditions:</b> studies at an international partner institution		<b>Credit Requirements:</b> written exam, oral exam, report, etc.
<b>Frequency:</b> each semester	<b>Recommended Semester:</b>	<b>Minimal Duration of the Module:</b> semester[s]
	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Special Topics in Materials Science (Foreign Institution)</b> <b>Language:</b> English		
<b>Examination</b> <b>Special Topics in Materials Science (Foreign Institution)</b> module exam, written exam, oral exam, report, etc., graded <b>Examination Prerequisites:</b> Special Topics in Materials Science (Foreign Institution)		

<b>Module PHM-0196: Surfaces and Interfaces II: Joining processes</b> <i>Surfaces and Interfaces II: Joining processes</i>		6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: Dr. Judith Moosburger-Will		
<b>Learning Outcomes / Competences:</b> The students - know the application areas of composite materials - know the basics of cohesion and adhesion - know the basics of joining techniques - are introduced to physical and chemical properties metal-metal, metal-polymer and polymer-polymer interfaces - Are able to independently acquire further knowledge of the scientific topic using various forms of information.		
<b>Workload:</b> Total: 180 h		
<b>Conditions:</b> Basic knowledge on materials science, lecture "Surfaces and Interfaces I" Module Surfaces and Interfaces (PHM-0117) - recommended		<b>Credit Requirements:</b> Bestehen der Modulprüfung
<b>Frequency:</b> each summer semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> any	

<b>Parts of the Module</b>
<b>Part of the Module: Surfaces and Interfaces II: Joining processes</b> <b>Mode of Instruction:</b> lecture <b>Lecturers:</b> Prof. Dr. Siegfried Horn <b>Language:</b> German <b>Contact Hours:</b> 3
<b>Contents:</b> The following topics are treated: - Introduction to adhesion - Role of surface and interface properties - Introduction to interactions at surfaces and interfaces - Adhesion theories - Surface and interface energy - Surface treatment techniques - Joining techniques - Physical and chemical properties of joints - Applications
<b>Lehr-/Lernmethoden:</b> Lecture: Beamer presentation and Blackboard Exercise: Exercises on recent topics, specialization of lecture contents
<b>Literature:</b> Literature, including actual scientific papers and reviews, will be announced at the beginning of the lecture.

**Examination**

**Surfaces and Interfaces II: Joining processes**

written exam / length of examination: 90 minutes, graded

**Examination Prerequisites:**

Surfaces and Interfaces II: Joining processes

**Parts of the Module**

**Part of the Module: Übung zu Surfaces and Interfaces II: Joining processes**

**Mode of Instruction:** exercise course

**Language:** German

**Contact Hours:** 1

<b>Module PHM-0169: Masterthesis</b> <i>Masterthesis</i>		26 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
<b>Contents:</b> According to chosen topic		
<b>Remarks:</b> The master's thesis will be offered in SoSe 2020 as soon as the current situation allows.		
<b>COMPULSORY MODULE</b>		
<b>Workload:</b> Total: 780 h 260 h studying of course content using provided materials (self-study) 520 h lecture and exercise course (attendance)		
<b>Conditions:</b> To begin with the Masterthesis students must have acquired 72 CP from modules consisting of the modulgroups 1a - 5.  Recommended: according to the respective advisor		<b>Credit Requirements:</b> written thesis
<b>Frequency:</b> each semester Siehe Bemerkungen	<b>Recommended Semester:</b> from 4.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 1	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program
