

Module Catalogue

Master Advanced Functional Materials (FAME)

Faculty of Mathematics, Natural Sciences, and Materials Engineering

Prüfungsordnung vom 26.02.2014

You can see the other use cases of the modules in Digicampus.

Index by Module Groups

1) 1a Basics of Materials Science I

Version 2 (since WS16/17)

	PHM-0144: Materials Physics (6 ECTS/LP, Wahlpflicht) *5
	PHM-0110: Materials Chemistry (6 ECTS/LP, Wahlpflicht)7
2) Ve	1b Basics of Materials Science II ersion 1 (since SoSe15)
	PHM-0117: Surfaces and Interfaces (6 ECTS/LP, Wahlpflicht) *9
3) ∨∉	2 Methods in Materials Science ersion 9 (since SoSe23)
	PHM-0287: Method Course: Spectroscopy of Organic Semiconductors (8 ECTS/LP, Wahlpflicht) *
	PHM-0297: Method Course: Methods in Bioanalytics (8 ECTS/LP, Wahlpflicht) *13
	PHM-0298: Method course: From macroscopic to microscopic ferroic properties (8 ECTS/LP, Wahlpflicht)
	PHM-0363: Method Course: Applying Theoretical Concepts from Non-equilibrium Statistical Physics (8 ECTS/LP) *
	PHM-0147: Method Course: Electron Microscopy (8 ECTS/LP, Wahlpflicht)19
	PHM-0146: Method Course: Electronics for Physicists and Materials Scientists (8 ECTS/LP, Wahlpflicht) *
	PHM-0172: Method Course: Functional Silicate-analogous Materials (8 ECTS/LP, Wahlpflicht)23
	PHM-0148: Method Course: Optical Properties of Solids (8 ECTS/LP, Wahlpflicht)25
	PHM-0149: Method Course: Methods in Biophysics (8 ECTS/LP, Wahlpflicht)27
	PHM-0153: Method Course: Magnetic and Superconducting Materials (8 ECTS/LP, Wahlpflicht)29
	PHM-0154: Method Course: Modern Solid State NMR Spectroscopy (8 ECTS/LP, Wahlpflicht) 31
	PHM-0206: Method Course: Infrared Microspectroscopy under Pressure (8 ECTS/LP, Wahlpflicht) *
	PHM-0216: Method Course: Thermal Analysis (8 ECTS/LP, Wahlpflicht) *
	PHM-0224: Method Course: Theoretical Concepts and Simulation (8 ECTS/LP, Wahlpflicht)
	PHM-0223: Method Course: Tools for Scientific Computing (8 ECTS/LP, Wahlpflicht)
	PHM-0258: Method course: Charge doping effects in semiconductors (8 ECTS/LP, Wahlpflicht) * 42
	PHM-0285: Method Course: Computational Biophysics (8 ECTS/LP, Wahlpflicht)44

* = At least one course for this module is offered in the current semester

4) 3 Conducting and Presenting Scientific Work

Version 1 (since SoSe15)

PHM-0158: Introduction to Materials (= Seminar) (4 ECTS/LP, Pflicht)	.46
PHM-0159: Laboratory Project (10 ECTS/LP, Pflicht)	.47

5) 4 Materials Science - Elective Topic

Version 4 (since WS21/22)

a) Physics of Materials

Version 4 (since WS21/22)

PHM-0051: Biophysics and Biomaterials (6 ECTS/LP, Wahlpflicht)	48
PHM-0160: Dielectric and Optical Materials (6 ECTS/LP, Wahlpflicht)	. 50
PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht)	. 52
PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP, Wahlpflicht)	. 54
PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht)	56
PHM-0174: Theoretical Concepts and Simulation (6 ECTS/LP, Wahlpflicht) *	. 58
PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (6 ECTS/LP, Wahlpflicht) *	. 60
PHM-0056: Ion-Solid Interaction (6 ECTS/LP, Wahlpflicht)	62
PHM-0057: Physics of Thin Films (6 ECTS/LP, Wahlpflicht)	. 64
PHM-0058: Organic Semiconductors (6 ECTS/LP, Wahlpflicht)	. 66
PHM-0060: Low Temperature Physics (6 ECTS/LP, Wahlpflicht) *	. 68
PHM-0068: Spintronics (6 ECTS/LP, Wahlpflicht)	70
PHM-0066: Superconductivity (6 ECTS/LP, Wahlpflicht)	. 72
PHM-0069: Applied Magnetic Materials and Methods (6 ECTS/LP, Wahlpflicht)	74
PHM-0198: Special Topics in Materials Science (Foreign Institution) (20 ECTS/LP)	76

b) Chemistry of Materials

Version 4 (since WS21/22)

PHM-0054: Chemical Physics II (6 ECTS/LP, Wahlpflicht)	77
PHM-0161: Coordination Materials (6 ECTS/LP, Wahlpflicht)	79
PHM-0113: Advanced Solid State Materials (6 ECTS/LP, Wahlpflicht)	81
PHM-0217: Advanced X-ray and Neutron Diffraction Techniques (6 ECTS/LP, Wahlpflicht)	83
PHM-0114: Porous Functional Materials (6 ECTS/LP, Wahlpflicht)	85

* = At least one course for this module is offered in the current semester

PHM-0167: Oxidation and Corrosion (6 ECTS/LP, Wahlpflicht) *	. 87
PHM-0198: Special Topics in Materials Science (Foreign Institution) (20 ECTS/LP)	.89
PHM-0218: Novel Methods in Solid State NMR Spectroscopy (6 ECTS/LP, Wahlpflicht) *	. 90

c) Engineering of Materials Version 4 (since WS21/22)

PHM-0164: Characterization of Composite Materials (6 ECTS/LP, Wahlpflicht)	91
PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht) *	93
PHM-0165: Introduction to Mechanical Engineering (6 ECTS/LP, Wahlpflicht)	95
MRM-0052: Functional Polymers (6 ECTS/LP, Wahlpflicht)	96
PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht) *	98
PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht)	.100
PHM-0184: Sustainable Resource Management (6 ECTS/LP, Wahlpflicht)	.102
PHM-0050: Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht)	104
PHM-0166: Carbon-based functional Materials (Carboterials) (6 ECTS/LP, Wahlpflicht)	.106
PHM-0198: Special Topics in Materials Science (Foreign Institution) (20 ECTS/LP)	108
PHM-0196: Surfaces and Interfaces II: Joining processes (6 ECTS/LP, Wahlpflicht)	109

6) 6 Finals

Version 1 (since SoSe15)

PHM-0169: Masterthesis (26 ECTS/LP, Pflicht)	111
PHM-0170: Colloquium (4 ECTS/LP, Pflicht) *	.112

Module PHM-0144: Materials Ph Materials Physics	ysics	6 ECTS/LP		
Version 1.1.0 (since WS15/16)				
Person responsible for module: apl. P	rof Dr. Helmut Karl			
Contante:				
Electrons in solids				
Phonons	Phonons			
 Properties of metals, semicondu 	uctors and insulators			
 Application in optical, electronic 	, and optoelectronic devices			
Dielectric solids, optical properti	ies			
Learning Outcomes / Competences	::			
 The students know the basic ter 	ms and concepts of solid state physics lik	te the free electron gas, electronic band		
structure, charge carrier statistic	cs, phonons, doping and optical properties	3,		
are capable to apply derived ap	proximations as the effective mass or the	electron-hole concept to describe		
basic characteristics of semicor	ductor materials,	ria electro-optic and thermal properties		
 nave the competence to apply to of solids and to describe their full 	netionalities			
 understand size effects on mate 	erial physical properties.			
 Integrated acquirement of soft s 	kills: Working with specialist literature, lite	erature search and interdisciplinary		
thinking.				
Remarks:				
compulsory module				
Workload:				
Total: 180 h				
120 h studying of course content usin	g provided materials (self-study)			
60 h lecture and exercise course (atte	ndance)			
Conditions:				
basic knowledge of solid state physics	\$			
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]		
Contact Hours:	Repeat Exams Permitted:			
4	according to the examination			
	regulations of the study program			
Parts of the Module				
Part of the Module: Materials Physi	CS			
Mode of Instruction: lecture				
Language: English				
Contact Hours: 3				

Learning Outcome:

see module description

Contents:

- · Electrons in solids: Free electron gas, band structure, effective mass
- · Lattice dynamics: Phonons, phonon dispersion, acoustic and optical phonons
- · Properties of metals: Electrical conductivity, Fermi surfaces, thermal properties
- · Properties of semiconductors: Pure, intrinsic semiconductors, equilibrium conditions, doping
- Properties of dielectric materials: Propagation of electromagnetic waves, frequency dependent optical properties, polarization effects.
- Application in devices: Heterostructures, Schottky contact, pn-junction, solar cell, light emission and technological aspects

Literature:

- Hummel R. E. : Electronic Properties of Materials Springer 2001 (UP1000 H925)
- Burns G.: Solid State Physics Academic Press 1990 (UP1000 B967)
- Ashcroft N. W., Mermin N.D.: Solid State Physics (UP1000 A 824)
- Kittel C. : Introduction to Solid State Physics (UP1000 K 62)

Assigned Courses:

Materials Physics (lecture)

Part of the Module: Materials Physics (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Learning Outcome:

see module description

Assigned Courses:

Materials Physics (Tutorial) (exercise course)

Examination

Materials Physics

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Materials Physics

Module PHM-0110: Materials Che	emistry	6 ECTS/LP
Materials Chemistry		
Version 1.2.0 (since WS09/10)		
Person responsible for module: Prof. Dr. Henning Höppe		
Contents: • Revision of basic chemical concernse • Solid state chemical aspects of s • Thermoelectrics • Battery electrode materials • Hydrogen storage materials • Data storage materials • Phosphors and pigments • Heterogeneous catalysis • nanoscale materials	elected materials, such as ,, ionic conductors s	
Learning Outcomes / Competences:		
Learning Outcomes / Competences.		
 be able to apply basic chemical concepts on materials science problems, broaden their ability to derive structure-property relations of materials combining their extended knowledge about symmetry-related properties, chemical bonding in solids and chemical properties of selected compound classes, be able to assess synthetic approaches towards relevant materials, acquire skills to perform literature research using online data bases. 		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study) 80 h studying of course content through exercises / case studies (self-study) Conditions: The lecture course is based on the Bachelor in Materials Science courses		
Chemie I and Chemie III (solid state ch	emistry). T	
Frequency:	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours:	Repeat Exams Permitted:	
4	according to the examination regulations of the study program

Examination

Materials Chemistry

written exam / length of examination: 90 minutes, graded

Test Frequency:

only in the winter semester

Examination Prerequisites:

Materials Chemistry

Description:

ab dem WiSe 2023/4 wird nur noch die Modulprüfung angeboten, jedoch keine Vorlesung mehr

from winter term 2023/4 on only the exam will be conducted, but no lecture anymore

Module PHM-0117: Surfaces and	Interfaces	6 ECTS/LP	
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Manfred Albrecht			
Contents: Introduction			
 The importance of surfaces and i 	interfaces		
Some basic facts from solid state physi	ics		
 Crystal lattice and reciprocal lattice Electronic structure of solids Lattice dynamics 			
Physics at surfaces and interfaces			
 Structure of ideal and real surfaces Relaxation and reconstruction Transport (diffusion, electronic) on interfaces Thermodynamics of interfaces Electronic structure of surfaces Chemical reactions on solid state surfaces (catalysis) Interface dominated materials (nano scale materials) 			
Methods to study chemical composition	n and electronic structure, application exa	amples	
 Scanning electron microscopy Scanning tunneling and scanning force microscopy Auger – electron – spectroscopy Photo electron spectroscopy 			
Learning Outcomes / Competences: The students:			
 have knowledge of the structure, the electronical properties, the thermodynamics, and the chemical reactions on surfaces and interfaces, acquire the skill to solve problems of fundamental research and applied sciences in the field of surface and interface physics, have the competence to solve certain problems autonomously based on the thought physical basics. Integrated acquirement of soft skills. 			
Workload: Total: 180 h 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)			
Conditions:			
The module "Physics IV - Solid State Physics" of the Bachelor of Physics /			
Frequency: each winter semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]	
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program		

Parts of the Module		
Part of the Module: Surfaces and Interfaces		
Mode of Instruction: lecture		
Language: English		
Frequency: annually		
Contact Hours: 3		
Learning Outcome:		
see module description		
Contents:		
see module description		
Literature:		
 Ertl, Küppers: Low Energy Electrons and Surface Chemistry (VCH) 		
 Lüth: Surfaces and Interfaces of Solids (Springer) 		
 Zangwill: Physics at Surfaces (Cambridge) 		
 Feldmann, Mayer: Fundamentals of Surface and thin Film Analysis (North Holland) 		
 Henzler, Göpel: Oberflächenphysik des Festkörpers (Teubner) 		
 Briggs, Seah: Practical Surface Analysis I und II (Wiley) 		
Assigned Courses:		
Surfaces and Interfaces (lecture)

Frequency: annually

Contact Hours: 1

Assigned Courses:

Surfaces and Interfaces (Tutorial) (exercise course)

Examination

Surfaces and Interfaces

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Surfaces and Interfaces

Module PHM-0287: Method Cours	se: Spectroscopy of Organic	8 ECTS/LP	
Semiconductors			
Method Course: Spectroscopy of Organic Semiconductors			
Version 1.0.0 (since SoSe22)			
Person responsible for module: Prof. D	r. Wolfgang Brütting		
Dr. Alexander Hofmann		-	
 Contents: Growth and characterisation of thin films (vapor deposition, spin coating, surface profiling, atomic force microscopy) Optical spectroscopy and photophysics (ellipsometry, transmission, steady-state and time-resolved photoluminescence, orientation anisotropy) Charge transport (space-charge limited current, field-effect mobility, doping) Light-emitting diodes (different emitter types, device efficiency measurement and simulation) 			
Learning Outcomes / Competences: The students			
 get familar with the preparation of organic semiconductors as thin films and in devices and learn basic spectroscopic techniques to characterise them, acquire skills to analyse properties of the materials taking into account their specific features, and have the competence to comprehend and attend to current problems in the field of organic electronics. Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to critically interpret experimental results. 			
Workload: Total: 240 b			
Conditions: Basic knowledge of atomic and solid state physics, as well as elementary concepts of quantum physics.		Credit Requirements: Bestehen der Modulprüfung	
Frequency: annually	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]	
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program		
Parts of the Module		-	

Part of the Module: Method Course: Spectroscopy of Organic Semiconductors

Mode of Instruction: lecture

Language: English / German

Contact Hours: 2

Lehr-/Lernmethoden:

The basics for each topic will be tought in class, e.g. using black board and beamer presentation.

Literature:

- M. Schwoerer, H. Ch. Wolf: Organic Molecular Solids (Wiley-VCH)
- A. Köhler, H. Bässler: Electronic Processes in Organic Semiconductors (Wiley-VCH)
- S.R. Forrest: Organic Electronics (Oxford Univ. Press)

Assigned Courses:

Method Course: Spectroscopy of Organic Semiconductors (lecture)

Part of the Module: Method Course: Spectroscopy of Organic Semiconductors (Practical Course)

Mode of Instruction: internship

Language: English / German

Contact Hours: 4

Lehr-/Lernmethoden:

After teaching in class, the students with go the lab to get practical experience with each topic.

Examination

Method Course: Spectroscopy of Organic Semiconductors

report, graded

Module PHM-0297: Method Course Method Course: Methods in Bioanalytic	se: Methods in Bioanalytics	8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. D	r. Janina Bahnemann	
Contents:		
- Basic concepts of instrumental analyti	ics, sensor technology, validation, qualit	y assurance
- Biological basics for sensor design an	d sample components	
- Biological markers, biomaterials and t	argets: bioreceptors: antibodies, enzyme	es, aptamers, cells, nanoparticles
- Sensor principles / transducers: optica	al, thermal, electrochemical, electromech	nanical, colorimetric
- Sensor materials (e.g., silicon, gold, p	lastics, polymers)	
- Immobilization of bioreceptors on sen	sor materials	
- Lateral flow assays, Point-of-Care dia	gnostics	
- Carbohydrate and lipid analysis: Chro	matographic methods (HPLC, GC, DC,	MS)
- Amino acid analytics: HPLC, fluoresce	ence spectroscopy	
- Nucleic acid analytics: PCR method, s	sequencing, electrophoresis, microarrays	8
- Protein analytics: Chromatography, el	ectrophoresis, spectroscopy, Bradford a	ssay
- Cell analytics: Flow cytometry and mid	croscopy	
- Concepts and materials for sensor de	velopment and optimization:	
e.g., Microfluidics, additive manufa	acturing, nanoporous materials, nanopar	ticles, amplifiers
 Students will be able to use acquir bioanalysis and their applications. Students will be able to transfer ac 	red analytical expertise to adequately de cquired knowledge from the lecture to pr	escribe and correlate basic principles of actical applications in the experimental
practical course.		
Students will demonstrate self-cor small groups.	npetence of work organization as well as	s social competence by working in
 Students will learn to identify prote glucose concentrations, and to scientific results. 	eins using various analytical methods, to cally evaluate, comprehensibly record in	set up biosensors for measuring writing, and present the practical
Remarks:		
ELECTIVE COMPULSORY MODULE		
Number of students will be limited to 9.		
Workload: Total: 240 h		
Conditions:		Credit Requirements:
keine / none	1	Practical work and written report
Frequency: each semester	Recommended Semester: 1 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: none

report, Practical work and written report on practical work, graded

Module PHM-0298: Method co microscopic ferroic properties	urse: From macroscopic to	8 ECTS/LP
Method course: From macroscopic	to microscopic ferroic properties	
Version 1.0.0 (since WS22/23)		
Person responsible for module: Pro	f. Dr. István Kézsmárki	
Contents:		
Within this course, the students will ferromagnetism, which play a key re course will teach the students to un scale and, after having a fundamen taught in preparing single crystals, p	learn the basic concepts of ferroic properti ole in materials science and engineering, a derstand and perform experiments on ferro tal understanding, microscopic measureme planning complex measurement procedure	es, e.g. ferroelectricity and t cryogenic temperatures. This method bic materials first, on a macroscopic ents. Therefore, the students will be s, and evaluating the measured data.
Magnetic Properties will be investig	ated via:	
 Magnetization measurements Susceptibility measurements Magnetic force microscopy (N 	1FM)	
Electric Properties will be investigat	ed via:	
 Linear and non-linear dielectr SEM / EDX Polarization measurements Conductive atomic force micro 	ic spectroscopy oscopy (cAFM) / piezo force microscopy (F	PFM)
 fundamental knowledge of pro- instruction in experimental me perform experiments at cryog trained in planning and perfor learn to evaluate and analyze combining knowledge of mac and magnetic properties 	operties in electric and magnetic materials ethods for investigation of ferroic properties enic temperatures ming complex experiments the collected data roscopic measurements to understand mic	of condensed matter
Remarks: ELECTIVE COMPULSORY MODU	LES	
Workload: Total: 240 h		
Conditions: Recommended: basic knowledge in	solid state physics and ferroic properties	Credit Requirements: Participation in laboratory course and oral examination.
Frequency: each semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		

Part of the Module: Method course: From macroscopic to microscopic ferroic properties

Language: English

Literature:

- N.W. Ashcroft, N.D. Mermin, Festkörperphysik (Oldenbourg)
- Ch. Kittel, Einführung in die Festkörperphysik (Oldenbourg)
- V. K. Wadhawan, Introduction to ferroic materials (CRC Press)
- S. Kalinin, A. Gruverman, Scanning Probe Microscopy Electrical and electromechanical phenomena at the nanoscale (Springer)
- A. K. Tagantsev, Domains in Ferroic Crystals and Thin films (Springer)

Part of the Module: Method course: From macroscopic to microscopic ferroic properties (Practical Course) Language: English

Contact Hours: 4

Examination

Method course: From macroscopic to microscopic ferroic properties

oral exam / length of examination: 45 minutes, graded

Modulo BHM 0262: Mothed Course: Applying Theoretical		
Concepts from Non-equilibrium Statistical Physics	8 ECT 3/LP	
Method Course: Applying Theoretical Concepts from Non-equilibrium		
Statistical Physics		
Version 1.0.0 (since WS23/24)		
Person responsible for module: Prof. Dr. Christoph Alexander Weber		
Contents:		
Phase separation kinetics of liquid mixtures		
Dynamics of simple fluids Kingting of some dilute election and inclustion groups		
Self-propelled aligning gases		
Motility-induced phase separation		
Long-range polar order in two-dimensional active systems		
Active Brownian motion		
 Mixtures of hot and cold particles 		
Stochastic chemical reaction kinetics at non-dilute conditions		
Learning Outcomes / Competences:		
Students will learn the following hard skills:		
 fundamental non-equilibrium theories (hydrodynamic transport theories, k 	inetic theories, dynamic density	
functional theory, stochastic descriptions, and Ito's stochastic calculus)		
 coarse-graining methods (lattice-based, moment expansion, Mori-Zwanzi analytical techniques (stability analysis, partial equilibria, multi scale participation) 	g,) urbation theories)	
 analytical techniques (stability analysis, partial equilibria, multi-scale perti- simulations techniques (lattice das automaton, Monte-Carlo, agent-based) 	stochastic particle dynamics	
stochastic rotational dynamics,),	,, paineie ajinainiee,	
discretization methods (Gillespie, spectral method, finite differences, finite	e elements)	
 programming in Python and/or C++ 		
Students will learn the following soft skills:		
Students learn how to apply theoretical concepts from non-equilibrium the	ermodynamics	
They get trained to establish links between theoretical concepts and mod	ern research problems	
They will build links between lecture and textbook knowledge and applied	research question, providing excellent	
preparation for Master's and Ph.D. research in theoretical physics		
 Students learn now to work in teams They get trained in autonomous working with scientific literature in English 	h improving written and spoken	
English during lectures and exercises,	in, improving whiten and operen	
Students get stimulated to develop interdisciplinary thinking, and working		
Remarks:		
It may be helpful if the students have participated or are simultaneously particip	ating in one of the following Master's	
courses: "Non-equilibrium Statistical Physics" and "Introduction to Stochastic Physics"	rocesses". Please note that this is not a	
prerequisite since there will be introductory lectures before the application sess	ions.	
Workload:		
Total: 240 h		
60 h studying of course content (self-study)		
90 h lecture and exercise course (attendance)		
30 h exam preparation (self-study)		
Conditions:	Credit Requirements:	
Pronounced interest in theoretical physics and Statistical Physics	Bestehen der Modulprüfung	

Frequency: each winter semester	Recommended Semester:	Minimal Duration of the Module: semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program

Examination

PHM-0363 Method Course: Applying Theoretical Concepts from Non-equilibrium Statistical Physics oral exam / length of examination: 1 hours, graded

Module PHM-0147: Method Cour Method Course: Electron Microscopy	se: Electron Microscopy	8 ECTS/LP
Version 1.3.0 (since SoSe15) Person responsible for module: Prof. D	Dr. Ferdinand Haider	
Contents:		
Scanning electron microscopy (SEM)		
Electron optical componentsDetectorsEDX, EBSD		
Transmission electron microscopy (TE	M)	
 Diffraction Contrast mechanisms High resolution EM Scanning TEM Analytical TEM Aberration correction 		
Learning Outcomes / Competences		
The students:		
 lectures to teach the theoretical lectures to teach the theoretical lectures to operate SEM and TE are able to characterize material Aquire the competence to decide aquire the competence to assess learn to search for scientific literation 	basics, which are afterwards deepened of M on a basic level s using different electron microscopy tec e about a technique feasible for a certain s EM images, also regarding artefacts ature and to formulate a scientific report	using practical courses, hniques problem.
Remarks: ELECTIVE COMPULSORY MODULE		
Workload: Total: 240 h 90 h lecture and exercise course (atter 150 h studying of course content using	ndance) I provided materials (self-study)	
Conditions: Recommended: knowledge of solid-sta	ate physics, reciprocal lattice	Credit Requirements: regular participation, oral presentation (10 min), written report (one report per group)
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method Course:	Electron Microscopy	

Mode of Instruction: lecture

Language: English

Contents:

SEM:

- 1. Layout of Electron Microscopes and Electron Optical Components
- 2. Electron Solid Interactions
- 3. Contrast Formation in Scanning Electron Microscopy (SEM)
- 4. SE/BSE contrast
- 5. Electron Back Scattering Diffraction (EBSD)
- 6. Analytical techniques
- 7. Special Applications of SEM

TEM:

- 1. TEM specimen preparation techniques
- 2. Components of a TEM, principle lens design, lens aberrations
- 3. Electron diffraction: fundamentals
- 4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, "chemical" imaging

Learning Outcome:

The students will know how to:

- · develop functional materials based on silicate-analogous materials,
- apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),
- work under non-ambient atmospheres (e.g. reducing, inert conditions),
- · solve and refine crystal structures from single-crystal data,
- · describe and classify these structures properly.

Contents:

Synthesis and characterization of functional materials according to the topics:

- 1. Silicate-analogous compounds
- 2. Luminescent materials / phosphors
- 3. Pigments
- 4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis

when a course is offered

Description:

The requirement for credit points is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Module PHM-0258: Method cou	rse: Charge doping effects in	8 ECTS/LP		
Semiconductors Method course: Charge doping effect				
Person responsible for module: Prof.	Dr. István Kézsmárki			
Dr. Lilian Prodan, Dr. Somnath Ghara				
Contents:				
The goal of the method course is to n concentration of charge carriers in se of materials science. For this purpose electron-doped and / or hole-doped n transport and magnetic properties.	The goal of the method course is to make students familiar with the concept of controlling the type and the concentration of charge carriers in semiconductors, which is widely used approach in electronics and various fields of materials science. For this purpose, the current method course will be dealing with the preparation of various electron-doped and / or hole-doped narrow-gap semiconductors and investigation of the influence of charge doping on transport and magnetic properties.			
The following techniques will be invol	ved:			
 Synthesis of electron and hole doped narrow-gap semiconductors, such as Zn- and Ge-doped GaV4S8, in poly- crystalline forms using solid state reaction; Refining the structure and checking phase purity by X-ray powder diffraction; Resistivity and magneto-transport measurements; Hall effect measurements to quantify carrier concentration; Investigation of the doping-induced changes in the magnetic properties by magnetization measurements. 				
Learning Outcomes / Competences	5:			
 The students gain basic knowledge how to tailor the bulk properties of narrow-gap semiconductors via different doping techniques. The students have detailed knowledge in performing XRD and magnetization experiments and know how to 				
analyze the data.				
The students acquire the comptence to plan and perform Hall effect and magnetoresistance experiments and				
evaluate the obtained experimental results.				
• The students have the skill to distinguish between an n-type and p-type semiconductor.				
The students know how to calculate the charge, mobility, and charge carrier density of a semiconductor using information obtained from the Hall effect experimente

Contents:

The following techniques will be involved:

- Synthesis of electron and hole doped narrow-gap semiconductors, such as Zn- and Ge-doped GaV4S8, in poly-crystalline forms using solid state reaction;
- Refining the structure and checking phase purity by X-ray powder diffraction;
- · Resistivity and magneto-transport measurements;
- · Hall effect measurements to quantify carrier concentration;
- Investigation of the doping-induced changes in the magnetic properties by magnetization measurements.

Assigned Courses:

Method Course: Charge doping effects in semiconductors (lecture)

Part of the Module: Method course: Charge doping effects in semiconductors

Mode of Instruction: lecture

Language: English

Contact Hours: 2

Learning Outcome:

The goal of the method course is to make students familiar with the concept of controlling the type and the concentration of charge carriers in semiconductors, which is widely used approach in electronics and various fields of materials science. For this purpose, the current method course will be dealing with the preparation of various electron-doped and / or hole-doped narrow-gap semiconductors and investigation of the influence of charge doping on transport and magnetic properties.

Assigned Courses:

Method Course: Charge doping effects in semiconductors (lecture)

Examination

Method course: Charge doping effects in semiconductors report, graded

Module PHM-0285: Method Course Method Course: Computational Biophy	se: Computational Biophysics	8 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. D	r. Nadine Schwierz-Neumann	
Contents: Life relies on the interactions of protein computational methods to study the str course, the physics behind biomolecula mechanics are reviewed. In the second dynamics simulations and Monte Carlo consisting of proteins, nucleic acids an	s, nucleic acids, lipids and other biomole ucture, dynamics and mechanics of thes ar simulations is explained and the basic l part, different simulation techniques are simulations. Subsequently the methods d lipids	ecules. This course introduces se biomolecules. In the first part of the principles of classical and statistical e introduced including molecular are applied to biological systems
 Learning Outcomes / Competences: Students develop an active unde simulations Students learn to solve typical bid Students learn how to run and ar Students learn to visualize, docu Remarks:	rstanding of the principles, the capacity ophysical problems analytically and num nalyze computer simulations of biologica ment and present their simulation results	and limitations of biomolecular erically I matter
Number of students will be limited to 15 Workload: Total: 240 h 90 h exam preparation (self-study) 60 h studying of course content (self-st 90 h (attendance)	5. udy)	
Conditions: Knowledge of classical mechanics on the bachelor level is expected.		Credit Requirements: Passing of the module exam
Frequency: every 3rd semester Ab SoSe2022	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		-

Part of the Module: Method Course: Computational Biophysics

Mode of Instruction: lecture

Language: English / German

Contact Hours: 2

Learning Outcome:

- Theoretical background of biomolecular simulations
- · Computational methods to describe the structure, dynamics and mechanics of biomolecules

Contents:

- · Introduction to classical mechanics in phase space
- · Probability and information theory
- Connection to statistical mechanics
- Molecular dynamics basics
- Monte Carlo Simulations
- · Forces and force fields in biomolecular systems
- · Simulations in different ensembles
- Calculating macroscopic thermodynamic properties from simulations

Literature:

- Daniel M. Zuckerman, Statistical Physics of Biomolecules (2010 by Taylor and Francis Inc.)
- Ken Dill and Sarina Bromberg, *Molecular Driving Forces* (2012 by Taylor and Francis Inc; 2nd edition)
- Daan Frenkel and Berend Smit, Understanding Molecular Simulation (2002 by Elsevier, 2nd edition)

Part of the Module: Method Course: Computational Biophysics (Practical Course)

Mode of Instruction: internship

Language: English / German

Contact Hours: 4

Learning Outcome:

- Students learn to solve typical biophysical problems analytically and numerically
- · Students learn to run and analyze computer simulations of biological matter
- · Students learn to visualization, documentation and presentation of results

Contents:

The methods and tools discussed in the lecture will be applied to typical biophysical problems and biological systems. The students work individually or in small teams under supervision. The students present their solutions, document their simulations and summarize their results in a final report.

Examination

Method Course: Computational Biophysics

written exam / length of examination: 2 hours, graded

Module PHM-0158: Introduction Introduction to Materials	to Materials (= Seminar)	4 ECTS/LP

Module PHM-0068: Spintronics Spintronics		6 ECTS/LP
Version 1.7.0 (since SoSe14)	German Hammerl	
	German nanmen	
 Contents: Basic micromagnetic interactions (exchange, anisotropy, DMI, stray fields, external fields) and where they come from Emergence of spin textures such as domain walls and bubbles/skyrmions Torques acting on the local magnetization (magnetic field torque, current in-plane spin-transfer torque, spin-Hall effect and spin-orbit torques) Switching Motion of spin textures, 1D model and Thiele equation Magneto-resistance and Hall effects and their utility in electrical readout Ultrafast effects Device applications 		
Learning Outcomes / Competences:		
 know the fundamental interactions in magnetic materials, the basic spintronic effects, and the related device structures, have the competence to deal with current problems in the field of spintronics largely autonomously, are able to choose materials in order to achieve demanding properties in spintronic applications, are able to design device components to achieve spin polarization, acquire scientific skills in finding and understanding current literature dealing with spintronic devices and applications, identifying suitable materials and material combinations with respect to their applicability for spintronic devices. 		
Workload:		
Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study)		
Conditions:		
none

Module PHM-0066: Superconduc	ctivity	6 ECTS/LP
Superconductivity		
Version 1.0.0 (since WS11/12)		·
Person responsible for module: Prof. I	Dr. Philipp Gegenwart	
Contents: Introductory Remarks and Literature History and Main Properties of the Superconducting State, an Overview Phenomenological Thermodynamics and Electrodynamics of the SC Ginzburg-Landau Theory Microscopic Theories Fundamental Experiments on the Nature of the Superconducting State Josephson-Effects High Temperature Superconductors Application of Superconductors 		
Learning Outcomes / Competences: The students:		
 will get an introduction to superconductivity, by a presentation of experimental results they will learn the fundamental properties of the superconducting state, are informed about the most important technical applications of superconductivity. Special attention will be drawn to the basic concepts of the main phenomeno-logical and microscopic theories of the superconducting state, to explain the experimental observations. For self-studies a comprehensive list of further reading will be supplied. 		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study)

Module PHM-0167: Oxidation and Corrosion	6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider	
Contents:	
Introduction	
Review of thermodynamics	
Chemical equilibria	
Electrochemistry	
Electrode kinetics	
High temperature oxidation	
Localized corrosion	
Shallow pit corrosion	
Pitting corrosion	
Crevice corrosion	
Stress corrosion cracking	
Fatigue corrosion	
Erosion corrosion	
Galvanic corrosion	
Water and seawater corrosion	
Corrosion monitoring	
Corrosion properties of specific materials	
Specific corrosion problems in certain branches	
Oil and Gas industry	
Automobile industry	
Food industry	
Corrosion protection	
Passive layers	
Reaction layers (Diffusion layers) Coatings (organic, inorganic)	
Cathodic, anodic protection	
• Inhibitors	
Learning Outcomes / Competences:	
The students:	
know the the fundamental basics, mechanics, types of corrosion process	es and their electrochemical
explanation	
 obtain the skill to understand typical electrochemical quantification of corr aquire the competence to assess, corrosion phenomena from typical darr 	osion processes.
Remarks:	
Scheduled every second summer semster.	
Workload:	
Total: 180 h	
60 h lecture and exercise course (attendance)	

120 h studying of course content using provided materials (self-study)

- National Instruments: MultiSim software package (available in the lecture)

Examination

Electronics for Physicists and Materials Scientists

oral exam / length of examination: 30 minutes, graded

Examination Prerequisites:

Electronics for Physicists and Materials Scientists

Module PHM-0166: Carbon-base	d functional Materials	6 ECTS/LP
(Carboterials)	rhoterials)	
Version 1.0.0 (since SoSe15)		
Person responsible for module: Prof. D	er. Dirk Volkmer	
Contents:		
1. Introduction to carbon allotropes and	d porous carbon materials [4]	
2. Physical properties of fullerenes, cal	bon nanotubes and graphene [4]	
3. Solid state NMR spectroscopy of ca	rbon materials [4]	
4. Metal carbides [4]		
5. Carbon thin films and coatings [4]		
6. Manufacturing and processing techr	ology of carbon fibres [4]	
7. Carbon-fibre reinforced polymer con	nposites [4]	
8. Carbon-fibre reinforced aluminium (I	Metal Matrix Composites, MMC) [4]	
9. Energy storage in carbon materials	[4]	
10. Carbon-based materials for opto-el	ectronics [4]	
11. Quantum transport phenomena rela	ating to carbon materials [4]	
12. a) Manipulating heat flow with carbon-based electronic analogs: phononics in place of electronics [2]		
12. b) Carbon-based spintronics [2]		
13. Fabrication and processing of carbon-based nanostructures [4]		
Learning Outcomes / Competences:		
The students:		
 know the basics of the chemistry acquire knowledge about the stru 	and physics of carbon materials and the	eir applications,
materials and carbon based devi	ces,	
learn to work with specialist literature in english.		
Workload:		
Total: 180 h		
20 h studying of course content using p	provided materials (self-study)	
20 h studying of course content throug	h exercises / case studies (self-study)	
60 h lecture and exercise course (atter	ndance)	
Conditions:		
none		
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours:	Repeat Exams Permitted:	
4	according to the examination	
	regulations of the study program	

Parts of the Module

Part of the Module: Carbon-based functional Materials (Carboterials)

Mode of Instruction: lecture

Language: English

Contact Hours: 4

Literature:

will be announced by the lecturers

Examination

Carbon-based functional Materials (Carboterials)

written exam / length of examination: 120 minutes, graded

Examination Prerequisites:

Carbon-based functional Materials (Carboterials)

Module PHM-0198: Special Topics in Materials Science (Foreign Institution) Special Topics in Materials Science (Foreign Institution)		20 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. D	r. Ferdinand Haider	
Conditions: studies at an international partner institution		Credit Requirements: written exam, oral exam, report, etc.
Frequency: each semester	Recommended Semester:	Minimal Duration of the Module: semester[s]
	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module Part of the Module: Special Topics in Materials Science (Foreign Institution) Language: English

Examination

Special Topics in Materials Science (Foreign Institution)

module exam, written exam, oral exam, report, etc., graded

Examination Prerequisites:

Special Topics in Materials Science (Foreign Institution)
Module PHM-0196: Surfaces and Interfaces II: Joining processes Surfaces and Interfaces II: Joining processes		6 ECTS/LP		
Version 1.1.0 (since WS15/16) Person responsible for module: Dr. Juc	lith Moosburger-Will			
Learning Outcomes / Competences: The students				
 know the application areas of compose know the basics of cohesion and adhed the two the basics of joining techniques are introduced to physical and chemice Are able to independently acquire further the two the	ite materials esion cal properties metal-metal, metal-polyme her knowledge of the scientific topic usir	er and polymer-polymer interfaces ng various forms of information.		
Workload: Total: 180 h				
Conditions: Basic knowledge on materials science, lecture "Surfaces and Interfaces I" Module Surfaces and Interfaces (PHM-0117) - recommended		Credit Requirements: Bestehen der Modulprüfung		
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]		
Contact Hours: 4	Repeat Exams Permitted: any			
Parts of the Module				
Part of the Module: Surfaces and Int Mode of Instruction: lecture Lecturers: Prof. Dr. Siegfried Horn Language: German Contact Hours: 3	erfaces II: Joining processes			
Contents: The following topics are treated:				
 Introduction to adhesion Role of surface and interface properties Introduction to interactions at surfaces and interfaces Adhesion theories Surface and interface energy Surface treatment techniques Joining techniques Physical and chemical properties of joints Applications 				
Lehr-/Lernmethoden: Lecture: Beamer presentation and I	Blackboard			
Exercise: Exercises on recent topics, specialization of lecture contents				
Literature: Literature, including actual scientific papers and reviews, will be announced at the beginning of the lecture.				

Examination

Surfaces and Interfaces II: Joining processes

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Surfaces and Interfaces II: Joining processes

Parts of the Module

Part of the Module: Übung zu Surfaces and Interfaces II: Joining processes

Mode of Instruction: exercise course Language: German Contact Hours: 1

Module PHM-0169: Masterthesis	5	26 ECTS/LP		
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer				
Contents: According to chosen topic				
Remarks: The master's thesis will be offered in \$	SoSe 2020 as soon as the current situation	on allows.		
COMPULSORY MODULE				
Workload: Total: 780 h 260 h studying of course content using provided materials (self-study) 520 h lecture and exercise course (attendance)				
Conditions: To begin with the Masterthesis students must have acquired 72 CP from modules consisting of the modulgroups 1a - 5.		Credit Requirements: written thesis		
Recommended: according to the respective advisor				
Frequency: each semester Siehe Bemerkungen	Recommended Semester: from 4.	Minimal Duration of the Module: 1 semester[s]		
Contact Hours: 1	Repeat Exams Permitted: according to the examination regulations of the study program			
Parts of the Module				
Part of the Module: Masterthesis Language: English				
Learning Outcome: see description of module				
Contents:				

see description of module

Examination	
Masterthesis	
Master's thesis, graded	
Examination Prerequisites:	
Masterthesis	

Module PHM-0170: Colloquium		4 ECTS/LP		
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer				
Contents: According to the respective Masterthes	is			
Remarks: The Colloquium will be offered in SoSe	2020 as soon as the current situation a	llows.		
COMPULSORY MODULE				
Workload: Total: 120 h 40 h studying of course content using p 80 h lecture and exercise course (atter	provided materials (self-study) dance)			
Conditions: submission of the masterthesis				
Frequency: each semester Siehe Bemerkungen	Recommended Semester: from 4.	Minimal Duration of the Module: 1 semester[s]		
Contact Hours: 1	Repeat Exams Permitted: according to the examination regulations of the study program			
Parts of the Module				
Part of the Module: Colloquium Language: English				
Learning Outcome: see description of module				
Contents: see description of module				
Assigned Courses:				
Masterarbeits-Seminar (seminar)				
Examination Colloquium seminar / length of examination: 20	minutes, graded			

Colloquium
