1) A. Core Data Science Methods

Version 1

2) B. Advanced Data Science Methods

Version 2 (since SoSe26)

3) C. Data Science Project

Version 1

7) G. Thesis

Version 1 (since WS24/25)

Module INF-3031: Algorithms & Data Engineering *Algorithms & Data Engineering*		8 ECTS/LP
Version 1.0.0 (since WS25/26) Person responsible for module: Prof. Dr. Fabian Panse Prof. Dr. Pascal Lenzner		
Learning Outcomes / Competences: After successfully completing this module, students will have mastered the basic principles and techniques for designing, implementing and evaluating systems for data preparation and integration. In addition, students have subject-specific knowledge to understand basic problems in the field of data engineering and to solve them by applying the skills they have learned. The module is divided into two parts. The first part deals with theoretical fundamentals. In addition to basic data structures and algorithmic solution paradigms (complexity classes, runtime analysis), this includes graph-theoretical algorithms, dynamic programming as well as search and hashing algorithms. The second part is dedicated to their use in various techniques from the areas of data preparation and data integration. This includes data cleaning, schema matching and data matching. Key qualifications: Independent work with textbooks; ability to abstract; analytical and structured problem-solving strategies; implementation of technical solution concepts in programs and models, ability to analyze and structure complex computer science problems; knowledge of the advantages/disadvantages of design alternatives and evaluation in the respective context; selection and correct application of suitable methods; knowledge of practice-relevant tasks; ability to solve problems under practice-oriented conditions;		
Workload: Total: 240 h 30 h studying of course content using provided materials (self-study) 30 h exercise course (attendance) 60 h lecture (attendance) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literarture (self-study)		
Conditions: none		**Credit Requirements:** Passing the Module Exam
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Algorithms & Data Engineering (Lecture) **Mode of Instruction:** lecture **Language:** English / German **Frequency:** each summer semester **Contact Hours:** 4,00

Contents:

The lecture includes basic concepts from the field of algorithms and data structures and their application in concrete problems of data engineering.

Concrete contents are:

- basic data structures
- algorithmic solution paradigms (complexity classes, runtime analysis)
- graph-theoretical algorithms
- dynamic programming
- search and hashing algorithms
- data preparation
- data cleaning
- schema matching
- data matching

Part of the Module: Algorithms & Data Engineering (Exercise)

Mode of Instruction: exercise course

Language: English / German

Frequency: each summer semester

Contact Hours: 2,00

Examination

Algorithms & Data Engineering

written exam / length of examination: 90 minutes, graded

Test Frequency:

when a course is offered

Module INF-3033: Machine Learning

Machine Learning

8 ECTS/LP

Version 1.0.0 (since SoSe25)
Person responsible for module: Prof. Dr. Jörg-Dieter Stückler

Learning Outcomes / Competences:
Students will understand the following methodological foundations of probabilistic machine learning at an in-depth scientific level and will be able to implement appropriate algorithms for advanced problems: Univariate and multivariate distributions, probabilistic graphical models, maximum likelihood and a-posteriori estimation, Bayesian inference and learning, information theory, expectation maximization, linear and logistic regression, probabilistic deep neural networks, Gaussian processes, probabilistic dimensionality reduction, deep generative models, and probabilistic state-space models. Participants understand the advantages and disadvantages of different methods and can analyze and select them for applications and apply them to new problems. Students have developed skills for analyzing and structuring probabilistic machine learning problems and know concepts and approaches for implementing algorithms for these problems. In addition, they have the competence to recognize significant scientific and technical developments.

Key qualifications: Ability to think logically, analytically and conceptually; selection and confident application of appropriate methods; independent work with textbooks; implementation of technical solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives, evaluation in the respective application context; ability to make scientifically meaningful assessments using appropriate methods. Comprehensible presentation of results; ability to work in teams.

Workload:
Total: 240 h
60 h lecture (attendance)
30 h exercise course (attendance)
30 h studying of course content using provided materials (self-study)
30 h studying of course content using literarture (self-study)
90 h studying of course content through exercises / case studies (self-study)

Conditions:
- Basic programming knowledge in Python
- Basic knowledge of probability theory
- Recommended: Basic knowledge in deep learning

Credit Requirements:
Passing the Module Exam

Frequency: each summer semester

Recommended Semester:
from 1.

Minimal Duration of the Module:
1 semester[s]

Contact Hours:
6,00

Repeat Exams Permitted:
according to the examination regulations of the study program

Parts of the Module

Part of the Module: Machine Learning (Lecture)
Language: English
Frequency: each summer semester
Contact Hours: 4,00

Contents:

This lecture teaches basic methods and algorithms for probabilistic machine learning. The lecture includes the following topics:

1. Univariate and multivariate distributions
2. Probabilistic graphical models
3. Maximum likelihood and a-posteriori estimation
4. Bayesian statistics and posterior predictive distribution
5. Bias-Variance tradeoff
6. Information theory
7. Linear and logistic regression
8. Variational inference
9. Expectation maximization and Gaussian mixture models
10. Probabilistic deep neural networks (deep ensembles, variational Bayesian neural networks, Laplace approximation)
11. Probabilistic dimensionality reduction (principal component analysis, variational autoencoders)
12. Deep generative models (probabilistic diffusion models)
13. Gaussian and Neural processes
14. Probabilistic state-space models

Literature:

Lecture slides will be provided. Additional references to literature will be provided in lecture and exercises.

Recommended textbooks:

Examination

Machine Learning

written exam / length of examination: 120 minutes, graded

Test Frequency:

when a course is offered

Module MTH-4270: Mathematical Methods in Data Science A

Mathematical Methods in Data Science A

8 ECTS/LP

Version 1.3.0
Person responsible for module: Prof. Dr. André Uschmajew

Contents:
- Basic mathematical concepts in data science and machine learning (least squares problems, regression, dimensionality reduction, singular value decomposition, convex and nonconvex optimization, gradient descent)
- Foundations of statistical learning theory
- Kernel methods and support vector machines
- Reproducing kernel Hilbert spaces

Learning Outcomes / Competences:
Students gain an overview of fundamental mathematical concepts in machine learning and data science. Furthermore, they acquire skills in advanced topics such as the basics of statistical learning theory or reproducing kernel Hilbert spaces. These concepts are applied to current learning models in order to analyze them.

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions: none		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program

only in the winter semester

Module MTH-4280: Mathematical Methods in Data Science B

Mathematical Methods in Data Science B

8 ECTS/LP

Version 1.5.0 (since WS25/26)
Person responsible for module: Prof. Dr. André Uschmajew

Contents:
Possible topics include:

- Statistical learning theory
- Neural network models
- Approximations theorems and deep learning
- Reinforcement learning

Learning Outcomes / Competences:
Students gain an overview of fundamental mathematical concepts in machine learning and data science. Furthermore, they acquire skills in advanced topics such as statistical learning theory, approximation theorems, or reinforcement learning. These concepts are applied to current learning models in order to analyze them.

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Module INF-0066: Organic Computing II

Organic Computing II

5 ECTS/LP

Version 1.3.0 (since SoSe14)
Person responsible for module: Prof. Dr. Jörg Hähner

Learning Outcomes / Competences:
Participants will be able to reproduce the essential concepts and methods of the research field of Organic Computing (OC).

These include: Self-Organisation, Self-Adaptation, Robustness, Flexibility, Observer/Controller architectures (O/C), Self-X properties, Learning Classifier Systems (most notably, XCS), Genetic Algorithms (GA), Particle Swarm Optimisation, Influence Detection and Trust. They will also be able to justify the consideration of OC systems–based solutions and give examples for practical scenarios in which OC techniques should be applied.

The students will be able to develop larger software systems using the O/C architecture as well as select suitable OC techniques for the architecture's components. They will be able to learn by themselves further OC techniques if solving a given problem requires it. Further, students will be able to solve practical problems using XCS, swarming and a GA. They will also be able to develop and evaluate OC system architectures and perform scientific evaluations related to OC systems.

Key qualifications: Ability to present and document results in a comprehensible way, ability to present ideas and concepts confidently and convincingly, knowledge of the way of thinking as well as the language of application-relevant disciplines, skill of working in teams.

Remarks:
Lecture and exercise course in English

Lecture slides in English

Exams can be taken in either German or English

Questions can be asked in either German or English

Workload:
Total: 150 h
15 h studying of course content using literarture (self-study)
15 h studying of course content using provided materials (self-study)
60 h studying of course content through exercises / case studies (self-study)
30 h lecture (attendance)
30 h exercise course (attendance)

Conditions: none		**Credit Requirements:** Passing the module exam
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Organic Computing II (Vorlesung)
Mode of Instruction: lecture
Language: German / English
Frequency: each summer semester
Contact Hours: 2,00

Contents:

The lecture "Organic Computing" teaches approaches to the organisation of complex networked systems that consist of a large number of autonomous subsystems. To this end, the requirements and goals of such systems are first defined and discussed. In addition, concepts from the field of system architectures and approaches from the field of nature-inspired algorithms are presented and evaluated. References to concrete application areas are given in all parts. The associated practice deepens the understanding of the approaches learned by applying them in an exemplary manner.

Übung zu Organic Computing II (exercise course)
*(in attendance) **

Examination

Organic Computing II (mündliche Prüfung)

oral exam / length of examination: 30 minutes, graded

Test Frequency:

when a course is offered

Description:

The exam can be taken every semester at the beginning and end of the lecture-free period.

Module INF-0217: Practical Module Autonomous Driving *Praktikum Autonomes Fahren*	10 ECTS/LP

Version 2.0.0 (since WS21/22)
Person responsible for module: Prof. Dr. Bernhard Bauer
Prof. Dr. Lars Mikelsons

Learning Outcomes / Competences:
After participating in the practical course on autonomous driving, students will be able to solve practical problems of high complexity in conceptual design, development, and safeguarding of highly automated/autonomous vehicles using current methods and tools of model-based development. The students acquire in-depth subject-specific and interdisciplinary knowledge and skills, for example, from hardware-related computer science, software engineering, and the underlying driving physics and mathematics. They are able to develop concepts, methods, procedures, techniques, and technologies of the mentioned field in research projects and are able to apply innovative approaches in solving problems. This enables them to link up with international research and make their scientific contribution to the field. In addition, students have the teamwork and communication skills, the ability to research literature and the scientific methodology to discuss problems in the area, define intermediate goals, and critically evaluate, classify, combine, present and document intermediate results and innovative ideas understandably.

Key qualification: Ability to think logically, analytically, and conceptually; Independent work with English-language specialist literature; Understandable, confident, and convincing presentation of ideas, concepts, and results; Quality awareness; Communication skills; Ability to work in teams and understand team processes; Project management skills.

Remarks:
The practical course is offered alternately by the two chairs mentioned above.

Workload:
Total: 300 h
150 h internship / practical course (attendance)
150 h studying of course content through exercises / case studies (self-study)

Conditions:		**Credit Requirements:**
Participation in one of the two seminars is recommended.		Passing the module exam
Frequency: irregular	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 10,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Praktikum Autonomes Fahren
Mode of Instruction: internship
Language: German / English
Frequency: irregular
Contact Hours: 10,00

Contents:

In this practical course, the participants learn how various selected partial aspects of autonomous driving can be implemented, simulated, and analyzed.

In addition, the participants will get to know, among other things, development tools frequently used in the automotive environment.

After an introductory course, the participants will implement autonomous driving functions in small groups with the help of the tools mentioned.

The developed results are finally demonstrated and evaluated.

Examination

Practical Module Autonomous Driving

portfolio exam, graded

Test Frequency:

when a course is offered

Module INF-0243: Process Mining *Process Mining*	6 ECTS/LP

Version 1.2.0 (since SoSe17)
Person responsible for module: Prof. Dr. Robert Lorenz

Learning Outcomes / Competences:
Participants understand the following essential concepts of computer science at an advanced scientific level, including their mathematical and formal foundations: event log, partial order, Petri net, concurrency, sequential and causal semantics of a concurrent system, synthesis of a concurrent system, business process, process mining, process discovery, conformance checking. They can model concurrent systems of medium complexity in a suitable modeling language, as well as generate, evaluate, and convert different models for analysis and simulation for a given concurrent system. They are familiar with the various process mining use cases with appropriate solution techniques and quality criteria for their evaluation. Participants will have advanced mathematical formal methodology for the analysis and formalization of complex process discovery problems. They will be able to confidently select suitable algorithms for their solution with regard to qualitative and quantitative criteria, apply them, and interpret and evaluate the results.
Key qualifications: Ability to think logically, analytically, conceptually, and algorithmically; Independent work with textbooks and English-language specialist literature; Clear presentation of results; Quality awareness; Meticulousness; Principles of good scientific practice; Scientific methodology;

Remarks:
The teaching materials are written in English (lecture notes and exercises). If foreign students with insufficient German language skills participate, the language of instruction will be English.

Workload:
Total: 180 h
45 h lecture (attendance)
15 h exercise course (attendance)
23 h studying of course content using literarture (self-study)
75 h studying of course content through exercises / case studies (self-study)
22 h studying of course content using provided materials (self-study)

Conditions: none		**Credit Requirements:** Passing the module examination
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Process Mining (Vorlesung)
Mode of Instruction: lecture
Language: German / English
Frequency: each summer semester
Contact Hours: 3,00

Contents:

The lecture provides a comprehensive overview of the field of process mining research:
- Modeling techniques: Petri nets, workflow nets, process trees, direct follows graphs
- Discovering algorithms: Alpha-Algorithm, Inductive Miner, Direct Follows Miner, Synthesis based discovery techniques
- Conformance checking: fitness, precision, generalization, simplicity
- Tools: PROM, Celonis

Module INF-0277: Analysing Massive Data Sets

Analyzing Massive Data Sets

8 ECTS/LP

Version 1.2.0 (since SoSe18)
Person responsible for module: Prof. Dr. Peter Michael Fischer

Learning Outcomes / Competences:
After attending the course, students will be able to understand and evaluate the concepts and methods, procedures, techniques, and technologies for analyzing massively large data sets. Possible content includes:

- Fundamentals of information retrieval
- Similarity search and clustering
- Analysis of data streams and temporal data
- Web graphs: Link analysis and social networks
- Dynamic networks and information diffusion
- Recommender systems and online advertising
- Computational methods for massive data sets

Students will also be able to implement technical solution concepts for analyzing large data sets in programs.
Key Skills: Ability to think logically, analytically and conceptually, weigh up approaches to solutions, acquire abstraction skills; subject-specific in-depth knowledge; implement subject-specific solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives and evaluation in the respective application context; selection and confident application of suitable methods; ability to make scientifically meaningful evaluations using suitable methods; ability to solve problems under practical boundary conditions; competence in recognizing significant technical developments;

Workload:
Total: 240 h
30 h studying of course content using literarture (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using provided materials (self-study)
60 h lecture (attendance)
30 h exercise course (attendance)

Conditions:
Module Database Systems (INF-0073) - recommended
Module Discrete structures for computer science (INF-0109) - recommended
Module Computer Science 3 (INF-0111) - recommended

Frequency: Sommersemester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]

Module INF-0293: Advanced Deep Learning

Advanced Deep Learning

8 ECTS/LP

Version 1.1.0 (since WS18/19)
Person responsible for module: Prof. Dr. Rainer Lienhart

Learning Outcomes / Competences:
After participating in the practical module, students have detailed and up-to-date knowledge in the field of machine learning, can identify significant technical developments and can implement a complete pipeline for multimodal data processing with deep neural networks. They can precisely describe and discuss problems and results in the field and apply learned concepts and methods to similar problems in machine learning. In addition, the students analyse advanced concepts, methods, procedures, techniques and technologies from the field of machine learning to apply them in research projects, transfer them to current industry-related tasks and actively participate in them. The students learn to transfer scientifically challenging topics in the field of machine learning to other research questions and, building on this, to work out a complex project in group work. They also have the teamwork and communication skills to discuss problems in the field, to discuss, describe and present questions and interim results. In addition, students can conduct detailed experiments and assess, compare and check results for plausibility.
Key qualifications:

Advanced mathematical-formal methodology; Translating subject-specific solution concepts into programs and models; Methods for developing larger software systems, construction of abstractions and architectures; Interdisciplinary knowledge; Systematic further development of design methods; Skill of confident and convincing presentation of ideas and concepts; Understanding of team processes; Skill of working in teams; Ability to lead teams; Familiarity with procedures and processes in the application environment of computer science; Skill of solving problems under practical boundary conditions; Self-reflection; Responsible action against the background of inadequacy and conflicting interests; Ability to expand existing knowledge independently; Quality awareness, meticulousness

Workload:
Total: 240 h
30 h studying of course content using provided materials (self-study)
30 h studying of course content using literarture (self-study)
120 h studying of course content through exercises / case studies (self-study)
20 h lecture (attendance)
40 h exercise course (attendance)

Conditions:
Fundamental knowledge in computer vision (basic studies lectures "Multimedia Grundlagen 1", "Grundlagen der Signalverarbeitung und des Maschinellen Lernens", "Multimedia Grundlagen 2" as well as master's lectures "Multimedia 2" and "Machine Learning and Computer Vision")

Credit Requirements:
Passing the portfolio examination

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Advanced Deep Learning (Lecture)

Description:

Die Endnote setzt sich aus bewerteten Übungsblättern und einem bewerteten Teamprojekt zusammen.

Module INF-0308: Software-Intensive Systems

Software-intensive Systeme

6 ECTS/LP

Version 1.2.0 (since SoSe19)
Person responsible for module: Prof. Dr. Bernhard Bauer

Learning Outcomes / Competences:
Students are able to design (K3), evaluate (K6), and document software architectures. For this purpose, they can transfer domain-specific solution concepts into models and are familiar with methods for developing such abstractions and architectures. They are able to describe the advantages and disadvantages of design alternatives (K4) and to evaluate them in the respective application context (K6). Problems can be independently identified (K4), and solutions can be systematically designed (K5) and implemented (K3). Furthermore, students have developed skills for analyzing and structuring problem domains within enterprise architectures and are familiar with the concepts and procedures for creating such architectures. Students are able to identify practice-relevant questions in enterprise architectures (K1). They can select appropriate methods for architecture design and evaluation and apply them confidently. Students are familiar with modeling languages and patterns for creating software and enterprise architectures. They have the competence to recognize significant technological developments.

Key competencies: Ability to integrate knowledge from different disciplines; teamwork and communication skills; ability to independently extend existing knowledge; quality awareness; ability to clearly present and document results; practical experience and professional qualification.

Workload:
Total: 180 h
22 h studying of course content using provided materials (self-study)
23 h studying of course content using literarture (self-study)
45 h lecture (attendance)
60 h studying of course content through exercises / case studies (self-study)
30 h exercise course (attendance)

Conditions:

- Fundamental knowledge of software development and software engineering
- Knowledge of object-oriented programming
- Fundamental knowledge of modeling languages (e.g., UML)
- Fundamental knowledge of software architectures and design patterns
- The previous course ‘Software-intensive Systems’ must not have been taken due to overlaps.

Frequency: irregular (usu. summer semester)	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 5,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Software-intensive Systeme (Vorlesung)

Software-intensive Systeme

oral exam / length of examination: 30 minutes, graded

Test Frequency:

when a course is offered

Module INF-0309: Real-Time Systems *Echtzeitsysteme*	8 ECTS/LP

Version 1.11.0 (since WS19/20)
Person responsible for module:
Prof. Dr. Sebastian Altmeyer

Learning Outcomes / Competences:
The lecture imparts basic and advanced knowledge of real-time systems as they occur in almost all embedded systems, but especially in the areas of automotive, aerospace and robotics. The theoretical foundations will be based on the current state of research and will enable students to further engage with the topic of embedded real-time systems at a scientific level.

The lecture will provide students with the ability to distinguish and classify different embedded systems based on their real-time requirements. Students will learn to apply, compare, and critically analyze current methods for validation of timing behavior with respect to possible certification of timing behavior. This includes the optimization and selection of real-time schedules and their verification. The lecture will also cover different processor types, and will go into more detail about the specifics of single-core and multi-core processors in the real-time domain. Students will be able to classify processors based on their suitability for real-time systems and to investigate the impact of design decisions on real-time behavior and real-time behavior analysis.

The course material will be exemplified by case studies from the automotive and aerospace fields and applied by the students using a simple real-time system.

Key qualifications: Analytical-methodical competence, consideration of approaches to solutions, presentation of solutions to exercise problems; skill in presenting and documenting results in a comprehensible manner; ability to expand existing knowledge independently; quality awareness, meticulousness; self-reflection; responsible action against a background of inadequacy and conflicting interests.

Workload:
Total: 240 h
30 h studying of course content using literarture (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using provided materials (self-study)
60 h lecture (attendance)
30 h exercise course (attendance)

Conditions: none		
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Echtzeitsysteme (Vorlesung)
Mode of Instruction: lecture

Module INF-0316: Machine Learning and Computer Vision *Machine Learning and Computer Vision*	8 ECTS/LP
Version 1.0.0 (since SoSe19) Person responsible for module: Prof. Dr. Rainer Lienhart	

Learning Outcomes / Competences:
After successful participation in this module, students possess advanced knowledge of machine learning (decision trees, neural networks and deep neural networks, hypothesis evaluation, instance-based learning, Bayesian learning, learning theory), data reduction (e.g. principal component analysis), advanced image processing and machine vision and are able to apply them. They can analyse, understand and programmatically implement scientifically complex procedures in the field of multimedia data processing, as well as to appropriately apply the principles learned to new problems. They develop skills in logical, analytical and conceptual thinking in the field of digital signal processing and multimedia data processing.

Key qualifications: advanced mathematical-formal logic; implementation of subject-specific solution concepts; interdisciplinary knowledge; development and implementation of solution strategies for complex problems; systematic further development of design methods; ability to solve problems under practical boundary conditions.

Workload:
Total: 240 h
30 h exercise course (attendance)
60 h lecture (attendance)
30 h studying of course content using provided materials (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)

Conditions:		**Credit Requirements:**
none		Passing the Module Exam
Frequency: each summer semester (except for summer term 2026)	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Machine Learning and Computer Vision (Lecture)
Mode of Instruction: lecture
Language: German
Frequency: each summer semester
Contact Hours: 4,00

Contents:
The lecture gives a good overview of all aspects of machine learning and machine extraction of information from multimedia data (e.g. "Google Image Search", "Google Goggles"). The learned concepts will be practised, analysed, and evaluated in the exercises using successful examples from practice. At the end of the semester, advanced topics such as object detection and object recognition of faces and people will be covered. The contents of the lecture include: Machine Learning (Decision Tree Learning, Artificial Neural Networks, Bayesian Learning, Discrete Adaboot), Data Reduction (Quantization (K-Means Clustering, Affinity Propagation), Dimensionality Reduction Techniques (PCA, NMF, Random Projection, MDS)) and Image Processing & Computer Vision (Salient Feature Points and Feature Descriptors, Object Detection (Face/Car/People Detection), Object Recognition (Face Recognition), Image Search with pLSA).

Literature:
Literature references will be announced at the beginning of the semester.

Assigned Courses:

Machine Learning and Computer Vision (lecture)
*(in attendance) *

Part of the Module: Machine Learning and Computer Vision (Tutorial)
Mode of Instruction: exercise course
Language: German
Frequency: each summer semester
Contact Hours: 2,00

Description:
The examination can be taken every semester during the examination period.

Module INF-0367: Advanced Machine Learning and Computer Vision

Advanced Machine Learning and Computer Vision

5 ECTS/LP

Version 1.0.0 (since WS20/21)
Person responsible for module: Prof. Dr. Rainer Lienhart

Learning Outcomes / Competences:
After successful participation in this module, students have in-depth advanced knowledge of machine learning (support vector machines and deep neural networks and their basic building blocks) and machine vision (deep neural network architectures and systems) and can apply these. They can analyse, understand and programmatically implement scientifically complex procedures in the field of image, text, video and signal processing, as well as to appropriately apply the principles learned to new problems. They develop skills in logical, analytical and conceptual thinking in the field of machine learning and vision.

Key qualifications: advanced mathematical-formal logic; critical reading and analysis of scientific publications; implementation of technical solution concepts; interdisciplinary knowledge; development and implementation of solution strategies of complex problems; systematic further development of design methods; skills in solving problems under practical boundary conditions

Workload:
Total: 150 h
30 h lecture (attendance)
60 h studying of course content through exercises / case studies (self-study)
30 h exercise course (attendance)
15 h studying of course content using literarture (self-study)
15 h studying of course content using provided materials (self-study)

Conditions:	**Credit Requirements:**
"Knowledge of Machine Learning and Computer Vision" (Master's lecture INF-0092 "Multimedia II" or INF-0316 "Machine Learning and Computer Vision")	Passing the module examination

Frequency: each winter semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Advanced Machine Learning and Computer Vision (Lecture)
Mode of Instruction: lecture
Language: German / English
Frequency: each winter semester
Contact Hours: 2,00

Contents:

The lecture gives an in-depth insight into all aspects of machine learning and machine vision. The concepts learned will be practiced, analyzed and evaluated in the exercises using successful real-world examples. The contents of the lecture include: support vector machines, basic building blocks of deep neural networks (layer structures, normalization, attention mechanisms), as well as current reference architectures and systems for image, text, video processing and their combination with further sensor signals.

Literature:

Will be announced at the beginning of the semester.

Part of the Module: Advanced Machine Learning and Computer Vision (Tutorial)
Mode of Instruction: exercise course

Description:
The examination can be taken every semester during the examination period.

Module INF-0368: Embedded Hardware *Embedded Hardware*	5 ECTS/LP
Version 1.2.0 (since WS20/21) Person responsible for module: Prof. Dr. Sebastian Altmeyer	

Learning Outcomes / Competences:

The lecture provides basic and advanced knowledge of hardware components (e.g. GPIO, hardware timer, ...) as they are found in almost all embedded systems. Furthermore, the functional principles of different sensors and actuators are presented. A special focus will be on their use to interact with the physical world and on particularities of their application. The theoretical foundations will be based on the current state of research and will allow students to further engage with the topic of embedded hardware at a scientific level.

The lecture will provide students with the ability to distinguish and classify different embedded systems based on their hardware requirements. Students will learn to apply current component programming methods, compare them, and critically analyze them for efficient use. This includes selecting and evaluating hardware components relevant to the system, as well as developing a configuration of components optimized for an existing problem. The lecture will also cover various sensors and actuators, and will go into more detail about the conversion between an analog, physical quantity and a digital, electrical quantity. Here, students will be able to classify physical quantities based on their properties and make a decision about the sensors, actuators, and hardware components needed for the conversion.

The subject matter is exemplified by means of case studies, e.g. from the automotive field, and applied by the students using a simple embedded system.

Key qualifications: Analytical-methodical competence, consideration of approaches to solutions, presentation of solutions to exercise problems; skill in presenting and documenting results in a comprehensible manner; ability to expand existing knowledge independently; quality awareness, meticulousness; self-reflection; responsible action against the background of inadequacy and conflicting interests.

Workload:

Total: 150 h
15 h studying of course content using provided materials (self-study)

Module INF-0371: Approximation Algorithms

Approximation Algorithms

5 ECTS/LP

Version 1.3.0 (since WS20/21)
Person responsible for module: Prof. Dr. Tobias Mömke

Learning Outcomes / Competences:
Developing an understanding of central topics in the field of approximation algorithms; acquiring powerful mathematical tools to analyze algorithms; improve the ability to abstract and systematically solve optimization problems.

Key Skills: Ability to build intuitive understanding of mathematical formalisms; ability to identify core properties of optimization problems; deep understanding of powerful mathematical tools

Remarks:
You can take this course only when you did not visit the course *INF-0420: Approximationsalgorithmen*!

Workload:
Total: 150 h
30 h exercise course (attendance)
30 h lecture (attendance)
60 h studying of course content through exercises / case studies (self-study)
15 h studying of course content using literarture (self-study)
15 h studying of course content using provided materials (self-study)

Conditions:
Basic knowledge of Algorithms and Data Structures (e.g., "INF-0111: Informatik 3") and Theoretical Computer Science (e.g., "INF-0110: Einführung in die Theoretische Informatik").

Credit Requirements:
Passing the module exam

Parts of the Module

Part of the Module: Approximation Algorithms (Vorlesung)
Mode of Instruction: lecture
Language: German / English
Frequency: irregular
Contact Hours: 2,00

Contents:

Given an NP-hard optimization problem, how well can it be approximated in polynomial time? It is exciting and challenging to understand the approximability of fundamental optimization problems. This course mainly focuses on upper bounds, i.e., designing efficient approximation algorithms.

In this course, we will study several classes of problems, such as packing problems, network design, and graph problems. We will cover central algorithmic techniques for designing approximation algorithms, including greedy algorithms, dynamic programming, linear and semi-definite programming, and randomization.

Module INF-0383: Algorithms for Big Data

Algorithmen für Big Data

5 ECTS/LP

Version 1.1.0 (since SoSe21)
Person responsible for module: Prof. Dr. Tobias Mömke

Learning Outcomes / Competences:
Development and understanding of central copetences in algorithm design for situations, where there are large amounts of data such that not all of them can be accessed without restrictions; aquisition of knowledge of mathematical tools to analyze algorithms; improvement of copetences in abstract thinking and analyzing problems in a systematic manner.

Key Qualifications: Ability to develop an intuitive understanding of mathematical formalisms; ability to identify the core properties of algirthmic problems; deep understanding of useful mathematical tools

Workload:
Total: 150 h
30 h exercise course (attendance)
30 h lecture (attendance)
15 h studying of course content using provided materials (self-study)
60 h studying of course content through exercises / case studies (self-study)
15 h studying of course content using literarture (self-study)

Conditions: Basic knowledge in algorithms and data structures (for example Informatik 3 (INF-0111)) and in probability theory (for example Stochastik für Informatiker (MTH-6040)).		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: irregular	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]

Parts of the Module

Part of the Module: Algorithms for Big Data (lecture)
Mode of Instruction: lecture
Language: German / English
Frequency: irregular
Contact Hours: 2,00

Contents:
In modern data processing, we increasingly have the problem that there are large quantities of data whcih con only be stored on cheap and slow mass storage media. Algorithmically, this poses the problem that at each point in time, we can only access a snapshot of the data, for example in a sequential manner. In the course, we study algorithms that despite such limitations provably yield high quality results.

Module INF-0408: Extremal Combinatorics

Extremal Combinatorics

5 ECTS/LP

Version 1.0.0 (since SoSe22)
Person responsible for module: Prof. Dr. Tobias Mömke

Learning Outcomes / Competences:

Knowledge

Developing an understanding of central topics in the field of combinatorics; acquiring powerful mathematical tools to analyze performance of algorithms; improve the ability to abstract and systematically solve counting problems.

Methodical Competences

The students are able to develop and write mathematical proofs in the context of advance combinatoric problems. They are able to understand complex reasoning and judge the correctness of mathematical arguments. The students are able to develp novel solution approaches, as solutions to relevant questions are usually not unique

Key Skills

Ability to build intuitive understanding of mathematical formalisms; ability to identify core properties of optimization problems; deep understanding of powerful mathematical tools; Skills of mathematical thinking

Workload:
Total: 150 h
30 h exercise course (attendance)
15 h studying of course content using provided materials (self-study)
15 h studying of course content using literarture (self-study)
60 h studying of course content through exercises / case studies (self-study)
30 h lecture (attendance)

Conditions: Basic knowledge in mathematics, in particular linear algebra is necessary. Basic knowledge in graph theory is recommended.		**Credit Requirements:** Passing the module exam
Frequency: irregular	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module INF-0432: Isabelle-Lab *Isabelle-Lab*	8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. Kirstin Peters	
Contents: The general idea of interactive theorem proving is introduced and the tool Isabelle/HOL is discussed. Several common features of Isabelle/HOL are studied: e.g. basic concepts such as data structures and functions, modelling mechanisms such as locales, proof techniques such as structural induction, and the proof language Isar.	
Learning Outcomes / Competences: **Knowledge:** Students will get to know the key concepts, definitions, and techniques of interactive theorem proving with Isabelle/HOL. They will get insights and practical knowledge about the design of models in Isabelle/HOL such as the conception of data structures and functions or the abstraction of concepts into a locale. They will learn strategies to tackle complex and technically very detailed proofs. They will learn about automated reasoning mechanisms as well as interactive proof tactics; their respective advantages and typical areas of application. Finally, students learn about the guarantees provided by machine checked proofs and the additional complexity that comes with such projects. **Skills:** Students will be familiar with the basic concepts of modelling and proving in Isabelle/HOL. Students will be able to formally and correctly model applications and concepts in Isabelle/HOL. They are able to select appropriate proof methods and carry out complex proofs with the assistance of Isabelle/HOL. They understand the hints provided by the proof assistance, can analyse the current state of a proof and its proof obligations, and can carry out the next relevant steps. They understand under which circumstances the automatic proof methods are useful and how to apply them. Moreover, they are able to plan and carry out a project and meet the time restrictions that come with such a project. Finally, they will practice logical and conceptual thinking as well as the abstraction and formalisation of concepts in a stringent mathematical framework. **Competences:** Students are prepared to work on verification projects. Students are able to plan and carry out the modelling as well as the proof obligations of such a project in an interactive theorem prover. They understand the nature of the correctness guarantees provided by machine checked proofs, but also the additional complexity that is necessary to carry out such proofs. Furthermore, they know how to characterise and judge on the quality and suitability of existing models and theories in Isabelle/HOL. More abstractly, they are able to reason more concretely about the correctness of a formalisation and proofs. **Key skills:** Formal methods; Knowledge of advantages and disadvantages of different design alternatives in modelling; Ability to carry out very detailed proofs; Ability to work on and organise projects; Ability to work autonomously; Quality awareness; Scientific working.	
Workload: Total: 240 h 30 h studying of course content using provided materials (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literarture (self-study) 60 h exercise course (attendance) 30 h lecture (attendance)

Module INF-0440: Quantum Algorithms

Quantum Algorithms

5 ECTS/LP

Version 1.0.0 (since SoSe23)
Person responsible for module: Prof. Dr. Jakob Siegfried Kottmann

Contents:

Foundations of Quantum Information Processing:

- qubits and their representation
- BraKet notation and necessary structures from linear algebra
- operations on qubits: circuits and gates

Quantum Algorithms

- quantum search and amplitude amplification
- quantum fourier transform and it's applications
- quantum simulation
- variational quantum algorithms
- differentiable quantum algorithmic procedures
- quantum heuristics
- usecases from current day research

Learning Outcomes / Competences:

Students acquire basic knowledge of quantum algorithms and are able to explain fundamental principles and describe their use in algorithmic structures. They can describe established algorithmic structures from the field of quantum algorithms, such as search, Fourier transform, and phase estimation, and determine and compare potential areas of application. After attending the course, they will be able to construct quantum algorithmic approaches and translate them into discrete operations on qubit systems. Students will have a sound basic knowledge of fundamental quantum algorithmic structures and variational heuristics. They will be able to identify, analyze, and evaluate quantum algorithmic elements in current literature.

Workload:

Total: 150 h
60 h studying of course content through exercises / case studies (self-study)

Module INF-0466: Biophotonics

Biophotonics

5 ECTS/LP

Version 1.3.0 (since WS23/24)
Person responsible for module: Prof. Dr. Sebastian Zaunseder

Learning Outcomes / Competences:
Subject-related competences:

After successful participation, students have knowledge and competences with regard to biophotonic methods for diagnostic applications. Students have basic knowledge from the field of photonics and know basic principles of light-tissue interaction. They are familiar with the functional principles of selected biophotonic methods for diagnostics, are able to work with them or with data from them and to interpret results. Students can also contribute to the (further) development of corresponding methods.

Methodological competencies:

Students are able to deal independently with the functionality and possible applications of biophotonic processes, to prepare biophotonic measurement data using common script languages such as Python, and to document and interpret the application of methods for data preparation appropriately. Students also have basic competencies in the area of modeling/simulation of biophotonic processes.

Interdisciplinary Competencies:

Students are able to apply the acquired knowledge in any area of study that deals with diagnostically relevant data. In addition, the module teaches essential problem-solving skills, whereby an abstract way of thinking as well as a structured approach to problem solving are learned.

Key skills:

Ability to think logically, analytically and conceptually; ability to present and document results in a comprehensible manner; ability to communicate orally and in writing in a way that is appropriate to the situation and specific to the target group; ability to work together in teams; ability to solve problems under practical boundary conditions; ability to expand existing knowledge independently; quality awareness.

Workload:
Total: 150 h
30 h exercise course (attendance)
30 h lecture (attendance)
60 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using provided materials (self-study)

Conditions: basic math skills; basic programming skills		**Credit Requirements:** Passing the module exam
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Biophotonics (Lecture)
Mode of Instruction: lecture
Language: English
Frequency: each winter semester
Contact Hours: 2,00

Contents:

The lecture deals with the fundamentals, implementation and application of biophotonic methods. The following contents are covered:

- Fundamentals of photonics
- Basics of light-tissue interaction
- Selected biophotonic methods in medical diagnostics (e.g. optical coherence tomography, laser speckle imaging, pulse oximetry)
- Introduction to possibilities for modeling and simulation in the context of biophotonics

Module INF-0476: Computer Vision for Intelligent Systems

Computer Vision für Intelligente Systeme

5 ECTS/LP

Version 1.1.0 (since WS23/24)
Person responsible for module: Prof. Dr. Jörg-Dieter Stückler

Learning Outcomes / Competences:
Students will understand the following methodological foundations of computer vision for intelligent systems at an in-depth scientific level and will be able to implement appropriate algorithms for advanced problems: Image formation, two-view geometry, deep learning basics for images and point clouds, image motion estimation and optical flow, keypoints and point correspondences, factor graphs and probabilistic state estimation, visual odometry and visual simultaneous localization and mapping, 3D object detection, 3D mapping. Participants understand the advantages and disadvantages of different methods and can analyze and select them for applications and apply them to new problems. Students have developed skills for analyzing and structuring machine vision problems for intelligent systems and know concepts and approaches for implementing algorithms for these problems. In addition, they have the competence to recognize significant technical developments.

Key qualifications: Ability to think logically, analytically and conceptually; selection and confident application of appropriate methods; independent work with textbooks; implementation of technical solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives, evaluation in the respective application context; ability to make scientifically meaningful assessments using appropriate methods. Comprehensible presentation of results; ability to work in teams.

Workload:
Total: 150 h
15 h studying of course content using provided materials (self-study)
15 h studying of course content using literarture (self-study)
60 h studying of course content through exercises / case studies (self-study)
30 h lecture (attendance)
30 h exercise course (attendance)

Conditions:
- Basic programming knowledge in Python
- Advantageous: Basic knowledge in Deep Learning

Credit Requirements:
Passing the module exam

Frequency: irregular (usu. winter semester)

Recommended Semester: from 1.

Minimal Duration of the Module: 1 semester[s]

Contact Hours: 4,00

Repeat Exams Permitted: according to the examination regulations of the study program

Parts of the Module

Part of the Module: Computer Vision for Intelligent Systems (Lecture)
Mode of Instruction: lecture
Language: English / German
Contact Hours: 2,00

Contents:

This lecture teaches basic methods and algorithms for computer vision for intelligent systems. The lecture covers the following topics:

- Image formation, geometric primitives and transformations.
- Two-view geometry
- Basics of deep learning for images and point clouds
- Motion estimation in images and optical flow
- Keypoints, descriptors and point correspondences
- Camera motion estimation from images
- Factor graphs and probabilistic state estimation
- Visual simultaneous localization and mapping
- 3D object detection
- 3D mapping

Literature:

Lecture slides will be provided. Additional literature will be provided in lecture and exercises.
Recommended textbooks:

Part of the Module: Computer Vision for Intelligent Systems (Exercises)
Mode of Instruction: exercise course
Language: English / German
Contact Hours: 2,00

Examination
Computer Vision for Intelligent Systems
written exam / length of examination: 90 minutes, graded
Test Frequency:
when a course is offered

Module INF-0499: Foundation Models in Deep Learning *Foundation Models in Deep Learning*	5 ECTS/LP
Version 1.0.0 (since SoSe24) Person responsible for module: Prof. Dr. Rainer Lienhart	
Learning Outcomes / Competences: After successful participation in this module, participants understand basics and in-depth issues and algorithms of robotics (e.g. recursive state estimation, Gaussian and non-parametric filters, Kalman filters, motion and localisation, perception, mapping, SLAM) from a probabilistic point of view and can apply learned concepts to complex, practice-relevant tasks. Students can analyse and evaluate problems in this context. Participation in this module promotes skills in logical, analytical and conceptual thinking in the field of probabilistic robotics. Students can select suitable methods from the concepts learned in a targeted manner, apply them confidently and transfer them to new problems, including those from other disciplines. The module imparts competencies for recognising current research and significant technological developments in this field. **Key qualifications**: advanced mathematical-formal logic; implementation of subject-specific solution concepts; interdisciplinary knowledge; development and implementation of solution strategies for complex problems; systematic further development of design methods; ability to solve problems under practical boundary conditions.	
Workload: Total: 150 h 30 h exercise course (attendance) 30 h lecture (attendance) 15 h studying of course content using provided materials (self-study) 60 h studying of course content through exercises / case studies (self-study) 15 h studying of course content using literarture (self-study)	

Conditions: Knowledge in machine learning and machine vision (Master lecture INF-0092 "Multimedia II" or INF-0316 "Machine Learning and Computer Vision")	**Credit Requirements:** Passing the module examination

Frequency: each summer semester except summer term 2026	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Probabilistic Robotics (Lecture) **Mode of Instruction:** lecture **Language:** German / English **Frequency:** each summer semester except summer term 2026 **Contact Hours:** 2,00

Contents:

1. Introduction to Probabilistic Robotics
2. Recursive State Estimation
3. Gaussian Filters
4. Nonparametric Filters
5. Robot Motion
6. Robot Perception
7. Mobile RobotLocalization: Markow and Gaussian
8. Mobile Robot Localization: Grid and MonteCarlo
9. Occupancy Grid Mapping
10. SLAM

Literature:

References will be announced at the beginning of the semester.

Part of the Module: Probabilistic Robotics (Tutorial)

Mode of Instruction: exercise course

Language: German / English

Frequency: each summer semester except summer term 2026

Contact Hours: 2,00

Examination

Probabilistic Robotics (Examination)

oral exam / length of examination: 30 minutes, graded

Test Frequency:

each semester

Description:

The examination can be taken every semester during the examination period.

Module INF-0504: Medical Monitoring and Advanced Sensor Data Processing *Medical Monitoring and Advanced Sensor Data Processing*		8 ECTS/LP
Version 1.3.0 (since SoSe24) Person responsible for module: Prof. Dr. Sebastian Zaunseder Aublin, Pierre, Dr.		
Learning Outcomes / Competences: **Subject-related competences**: After successful participation, students have knowledge and competences with regard to the field of medical monitoring. Students have basic knowledge on the background of medical monitoring and common technical solutions for clinical and out-of-hospital use. They are familiar with the functional principles of various methods relevant to medical monitoring and their interpretation. Students can also contribute to the (further) development of monitoring applications. **Methodological competencies**: Students are able to deal independently with solutions to medical monitoring. In particular, they are able to process medical data using common script languages such as Python, to document their solutions and to interpret processing results appropriately. In addition, Students have basic competencies in the handling of monitoring data and devices for monitoring. **Interdisciplinary Competencies**: Students are able to apply the acquired knowledge in any area of study that deals with (medical) data. In addition, the module teaches essential problem-solving skills, whereby an abstract way of thinking as well as a structured approach to problem solving are learned. **Key skills**: Ability to think logically, analytically and conceptually; ability to present and document results in a comprehensible manner; ability to communicate orally and in writing in a way that is appropriate to the situation and specific to the target group; ability to work together in teams; ability to solve problems under practical boundary conditions; ability to expand existing knowledge independently; quality awareness.		
Workload: Total: 150 h 60 h studying of course content using provided materials (self-study) 60 h exercise course (attendance) 90 h studying of course content through exercises / case studies (self-study) 30 h lecture (attendance)		
Conditions: basic math skills; basic programming skills; basic knowledge on handling digital signals		**Credit Requirements:** Passing the module exam
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Medical monitoring and advanced sensor data processing (Lecture)
Mode of Instruction: lecture
Language: English
Frequency: each summer semester
Contact Hours: 2,00

Contents:

The lecture deals with the fundamentals, implementations and applications of medical monitoring. The following topics, all of them elaborate with respect and in close connection to medical monitoring, are covered:

- Fundamentals of medical monitoring (basic ideas, history, current solutions, trends)
- Fundamentals of sensor data fusion
- Preprocessing approaches (e.g. denoising by conventional filters, Kalman filters and autoencoders)
- Dimension reduction and source separation (e.g. principal component analysis and independent component analysis)
- Feature extraction by functional transforms (e.g. time-frequency transforms)
- Basic detection/classification approaches

Literature:

- S. Bernhard, A. Brensing, and K.-H. Witte, *Biosignalverarbeitung*. De Gruyter, 2019. doi: 10.1515/9783110442434.

Assigned Courses:

Medical Monitoring and Advanced Sensor Data Processing (lecture)
**(in attendance) **

Part of the Module: Medical Monitoring and Advanced Sensor Data Processing (Exercise)
Mode of Instruction: exercise course
Language: English
Frequency: each summer semester
Contact Hours: 4,00

Contents:

The exercise teaches practical skills with relevance to the field of medical monitoring. The focus is handling and processing data from/for monitoring applications. The following contents are covered:

- Familiarization with techniques of data acquisition and handling data
- Denoising of data of variable origin
- Application of feature extraction and dimension reduction techniques
- Prediction/detection of (patho)physiological states
- Techniques for visualization and interpretation of sensor data

Assigned Courses:

Exercise to Medical Monitoring and Advanced Sensor Data Processing (exercise course)
**(hybrid/mixed) **

Examination

Module INF-0506: Search Engines and Neural Information Retrieval

8 ECTS/LP

Search Engines and Neural Information Retrieval

Version 1.3.0 (since SoSe24)
Person responsible for module: Prof. Dr. Annemarie Friedrich

Learning Outcomes / Competences:
Neural Information Retrieval leverages the power of neural networks to enhance the representation, understanding, and retrieval of information, addressing many of the challenges posed by the complexity and variability of natural language. With the recent development in the area of large language models (or more generally, foundation models), novel approaches to interactive information retrieval are developing.

After taking part in the course, students are able to explain the concepts and methods, procedures, techniques and technologies related to neural information retrieval. In particular, the course covers:

- Basics of traditional information retrieval methods
- Vector-based document and query representations (topic modeling and neural representations)
- Ranking with embeddings
- Question answering, entity search, and knowledge graphs
- Multimodal retrieval
- Interactive information retrieval and personalization

Students will be able to recognise important technical developments in the field of information retrieval. They can apply machine learning procedures, such as feature extraction, embedding learning, and pattern recognition, to information retrieval problems. They will be able to perform literature research in the area of information retrieval, and identify gaps in the state-of-the-art. They know how to make scientifically meaningful evaluations of proposed systems. They will further learn how to document and present results and complex ideas in a reasonable and meaningful way. Participants will also deepen their programming skills in Python.

Key skills: Formal methods; Knowledge of advantages and disadvantages of different design alternatives; Ability to work in teams; Knowledge of workflows and processes; Ability to find solutions for practical problems; Ability to work autonomously; Quality awareness; Scientific working; Literature research.

Workload:
Total: 240 h
30 h exercise course (attendance)
60 h lecture (attendance)
120 h studying of course content through exercises / case studies (self-study)
15 h studying of course content using literarture (self-study)
15 h studying of course content using provided materials (self-study)

Conditions: Recommended: linear algebra, basic probability theory, Python programming.		**Credit Requirements:** Passing the module exam
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Search Engines and Neural Information Retrieval (Lecture)
Language: English / German
Frequency: each winter semester
Contact Hours: 4,00

Contents:

This first part of this interactive course will cover the basics of traditional search engine technology, topic modeling, query expansion, collaborative filtering, neural networks, word and document embeddings, transformers, text classification, ranking and learning to rank, question answering, and evaluation designs. The second part of the course will dive into the recent literature on neural information retrieval including (for example) multi-modal search, interactive retrieval systems, entity search, personalization, and retrieval-augmented generative artificial intelligence. We will also discuss aspects related to responsible information retrieval such as bias and transparency.

The course design is complementary to INF-0277 Analyzing Massive Datasets, which focuses on compute frameworks and algorithms for processing big data.

Module INF-0509: Embodied Artificial Intelligence

Embodied Artificial Intelligence

8 ECTS/LP

Version 1.0.0 (since SoSe24)
Person responsible for module: Prof. Dr. Jörg-Dieter Stückler

Learning Outcomes / Competences:
Students will understand fundamental and contemporary methods of embodied artificial intelligence (robot learning, reinforcement learning, visual scene perception, foundation models for robotics) at a scientific level and will gain practical experience by implementing appropriate algorithms for advanced problems in team projects. Participants understand the advantages and disadvantages of different methods and can analyze and select them for applications and apply them to new problems. Students have developed skills for analyzing and structuring problems in embodied artificial intelligence and know concepts and approaches for implementing algorithms for these problems. In addition, they have the competence to recognize significant scientific and technical developments.

Key qualifications: Ability to think logically, analytically and conceptually; selection and confident application of appropriate methods; independent work with textbooks; implementation of technical solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives, evaluation in the respective application context; ability to make scientifically meaningful assessments using appropriate methods. Comprehensible presentation of results; ability to work in teams.

Workload:
Total: 240 h
30 h studying of course content using provided materials (self-study)
30 h studying of course content using literarture (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h lecture (attendance)
60 h exercise course (attendance)

Conditions:
- Basic programming knowledge in Python
- Basic knowledge in Deep Learning

Credit Requirements:
Passing the module exam

Frequency: irregular (usu. summer semester)	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Embodied Artificial Intelligence (Lecture)
Mode of Instruction: lecture
Language: English
Frequency: irregular (usu. summer semester)
Contact Hours: 2,00

Contents:

Embodied artificial intelligence is about intelligent robots which learn to solve tasks that require perception and interaction with the environment through the agent's embodiment (sensors and actuators). More specifically, the course will cover state-of-the-art methods for robot learning and perception.

The course consists of a lecture part, which teaches theoretical basics and contempory methods in embodied artificial intelligence, and an exercise part, which deepens the contents of the lecture in the exercises in practical team projects. The course includes the following topics:

1. Introduction
2. Robot kinematics
3. Deep learning basics
4. Transformer and diffusion models
5. Model-free reinforcement learning
6. Model-based reinforcement learning
7. Imitation learning
8. Vision-language-action models
9. Object perception
10. Localization and mapping

Literature:

Lecture slides will be provided. Additional references to literature will be provided in the lecture.

Module INF-3037: Graph Algorithms

Graph Algorithms

8 ECTS/LP

Version 1.0.0 (since SoSe25)
Person responsible for module: Prof. Dr. Pascal Lenzner

Learning Outcomes / Competences:
The goal of the lecture is to use suitably chosen examples to give a broad overview over the field of Graph Algorithms. The students will learn how to design and analyse graph algorithms for various settings . They will be able to understand and explain different graph-theoretic concepts as well as their application in different domains.
They will also be able to understand and apply several practical algorithms for computing shortest paths, flows, matchings, cuts, and embeddings. For this we will formally analyze the efficiency and other properties of the employed algorithms. Moreover, the students will learn how to evaluate the impact of graph properties on complexity of graph problems.

Key skills: Advanced mathematical-formal methodology, subject-specific specializations, quantitative aspects of computer science, ability to analyze and structure complex computer science problems, ability to develop and implement solution strategies for complex problems, knowledge of the advantages/disadvantages of design alternatives, evaluation in the respective application context, Ability to think logically, analytically and conceptually, selection and reliable application of suitable methods, ability to work in teams, knowledge of practical tasks, ability to present and document results in a comprehensible manner, ability to expand existing knowledge independently, quality awareness, meticulousness

Workload:
Total: 240 h
30 h studying of course content using provided materials (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)
30 h exercise course (attendance)
60 h lecture (attendance)

Conditions:
No fixed prerequisites, but basic knowledge in the design and analysis of algorithms as well in compexity theory from the Bachelor studies will be assumed.

Credit Requirements:
Passing the module exam

Frequency: each summer semester

Recommended Semester:
from 1.

Minimal Duration of the Module:
1 semester[s]

Contact Hours:
6,00

Repeat Exams Permitted:
according to the examination regulations of the study program

Parts of the Module

Part of the Module: Graph Algorithms (Lecture)
Mode of Instruction: lecture
Language: English / German
Frequency: each winter semester
Contact Hours: 4,00

Contents:

Graphs play a central role in the world of algorithms. For example, navigation devices use an algorithm to compute shortest paths on a graph to answer a route query. Many planning and assignment problems can also be easily modeled as problems on graphs. In principle, it is true that a great many problems can be thought of as graph problems, so designing efficient algorithms for such problems is an important subfield of theoretical computer science.

In this lecture we will enter the world of graph algorithms. On the one hand, we will learn about important algorithmic problem classes on graphs and efficient algorithms to solve them. Among other things, we will look at finding shortest paths, flows, cuts, separators, and matchings in graphs. Algorithms for these problems have a wide variety of applications, making them an important and useful tool for any algorithmicist. On the other hand, we will also study how constraints on the graphs at hand affect the complexity of the problems and their algorithmic solution. For example, many algorithmic problems are more efficiently solvable on trees and planar graphs (i.e., graphs that can be embedded in the plane without intersection) than on general graphs. We will also explore some properties of graphs that we can exploit specifically for designing efficient algorithms. For example, trees and planar graphs have small separators (sets of nodes whose removal causes the graphs to decompose into multiple context components), which helps design efficient divide & conquer algorithms.

The goal of the lecture is the development and training of a structured approach to algorithmic problems on graphs. In doing so, we will jointly develop efficient graph algorithms with appropriate data structures, prove their correctness, and analyze their resource requirements (runtime and memory). In addition, the lecture will highlight special graph classes and other important concepts in graph theory and their impact on the world of algorithms.

Module INF-3049: Trustworthy Artificial Intelligence *Trustworthy Artificial Intelligence*	5 ECTS/LP

Version 1.0.0 (since WS25/26)
Person responsible for module: Prof. Dr. Bernhard Bauer
Dr. Fabian Stieler

Learning Outcomes / Competences:
Students acquire knowledge of central concepts and principles of trustworthy AI, including ethical, legal and social framework conditions as well as technical requirements. They will understand how trustworthy AI systems can be designed, evaluated and documented and will be able to apply these theoretical principles to practical issues.

The course presents methods and approaches that can ensure transparency, explainability, fairness, security, robustness and data protection in AI systems. These include, for example, methods of interpretable machine learning. Students learn to identify typical challenges such as bias, security risks and data protection issues and to develop suitable solutions. This also includes cybersecurity in the context of AI systems, whereby students become familiar with specific attack scenarios and develop suitable protection mechanisms conceptually.

In addition, students gain in-depth insights into software engineering for AI systems. Key concepts such as machine learning operations (MLOps), AI lifecycle management and principles such as reproducibility, automation and scalability are taught. Other focal points include aspects of operating AI systems in production environments, including infrastructure, monitoring and concept drift.

Furthermore, students are taught organizational and technical measures to ensure accountability, traceability and governance. They learn about relevant standards and procedures in the areas of auditing, certification and risk management of AI systems as well as approaches to the sustainable and responsible development of AI systems.

Key qualifications: Understanding of interdisciplinary relationships between technology, ethics and law; teamwork and communication skills; independent acquisition of knowledge; quality awareness; ability to document AI systems in a comprehensible manner; sensitization to practical professional requirements.

Workload:
Total: 150 h
30 h lecture (attendance)
30 h exercise course (attendance)
15 h studying of course content using provided materials (self-study)
15 h studying of course content using literarture (self-study)
60 h studying of course content through exercises / case studies (self-study)

Module INF-3815: Advanced Biomedical Systems Modelling and Data Science

5 ECTS/LP

Advanced Biomedical Systems Modeling and Data Science

Version 1.0.0 (since SoSe25)
Person responsible for module: Prof. Dr. Andreas Raue

Learning Outcomes / Competences:
This interdisciplinary course provides advanced-level knowledge of computational techniques in systems modeling and data science applied to complex biomedical challenges.

Students will expand their expertise in mathematical modeling, machine learning, and biological data analysis. The course emphasizes both theoretical understanding and practical application through project-based learning.

A solid background in biology, mathematics (calculus, linear algebra, differential equations), and programming (Python) is required.

The goal of this course is to prepare students for a career path as scientists in biomedical, biotechnology or pharmaceutical industry, or for continuing their academic training and research by acquiring a PhD degree.

Objectives:

- Deepen understanding of systems modeling and data science principles.
- Develop expertise in handling complex datasets and applying advanced models and methods.
- Enhance proficiency in interpreting and presenting biomedical data using advanced models.
- Strengthen project design and critical evaluation skills for scientific research.

Workload:
Total: 150 h
15 h studying of course content using literarture (self-study)
60 h studying of course content through exercises / case studies (self-study)

Description:
The portfolio exam will consist of two parts:

- Practice/homework coding tasks: You will be able to largely complete those during the computer practice or at home.
- Written exam: Questions will cover the comprehension of the contents of the lectures.

Module INF-3829: Digital Biomarkers *Digital Biomarkers*	5 ECTS/LP
Version 1.0.0 (since SoSe25) Person responsible for module: Prof. Dr.-Ing Muthuraman Muthuraman Manuel Bange	

Learning Outcomes / Competences:
Fachbezogene Kompetenzen:

After attending the lecture, students will gain knowledge about selected digital biomarkers (e.g. bioimaging, kinetics, and kinematics) in medicine. They will acquire fundamental skills for developing and evaluating novel biomarkers based on forceplates and video based pose estimation and will understand the underlying requirements. Students will know the mechanisms of digital techniques for diagnostics and will develop the ability to analyze and interpret the data obtained. Furthermore, they will be equipped to contribute to the advancement and development of these procedures.

Methodische Kompetenzen:

Students can independently engage with the applications of digital biomarker tools from the domains of imaging, kinetics, and kinematics. They are capable of processing various measurement data using common scripting languages such as Matlab or Python and appropriately documenting and interpreting the application of methods for data analysis.

Fachübergreifende Kompetenzen:

The students are able to apply the acquired knowledge to any area of their studies that deals with diagnostically relevant data. Moreover, the module imparts essential problem-solving skills, teaching abstract thinking and a structured approach to problem-solving.

Key skills:

Skills in logical, analytical, and conceptual thinking; ability to present and document results understandably; skill in communicating effectively in writing and verbally in a situation-appropriate and audience-specific manner; ability to collaborate in teams; proficiency in problem-solving under practical conditions; capability to independently expand existing knowledge; awareness of quality.

Workload:
Total: 150 h
20 h studying of course content using literarture (self-study)
30 h studying of course content through exercises / case studies (self-study)
40 h preparation of written term papers (self-study)
30 h lecture (attendance)
30 h exercise course (attendance)

Conditions: none		**Credit Requirements:** Passing the module exam
Frequency: each summer semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Digital Biomarkers (Lecture)
Language: English
Frequency: each summer semester
Contact Hours: 2,00

Contents:

The lecture deals with the fundamentals, implementation, and application of digital biomarkers. The following contents are covered:

- Basics of imaging
- Basics of kinematic movement analysis
- Basics of kinetic movement analysis
- Selected applications in medicine (including various diseases and medical conditions)
- Introduction to basic and advanced methods for developing and validating Biomarkers

Assigned Courses:

Digital Biomarkers (lecture)
**(in attendance) **

Part of the Module: Digital Biomarkers (Exercise)
Language: English
Frequency: each summer semester
Contact Hours: 2,00

Contents:

The exercise imparts practical skills in the context of the application of digital biomarkers. Furthermore, recent developments and novel biomarkers will be presented and discussed. The focus is on understanding the possible applications and relevant challenges of developing digital biomarkers. The following contents are covered:

- Presentation and discussion of selected applications in medicine (including various diseases and medical conditions)
- Handling of measurement data
- Validating biomarkers

Assigned Courses:

Exercise to Digital Biomarkers (exercise course)
**(in attendance) **

Examination
Digital Biomarkers
portfolio exam, graded

Module MTH-1488: Algebraic geometry I

Algebraische Geometrie I

8 ECTS/LP

Version 1.0.0

Person responsible for module: Prof. Dr. Marc Nieper-Wißkirchen

Learning Outcomes / Competences:

Im Rahmen der Vorlesung haben die Studenten gelernt, ihr im Bachelorstudium im Bereich der Algebra erworbenes Wissen anhand konkreter Probleme aus der algebraischen Geometrie anzuwenden. Daneben ist neben einem mathematischen auch ein gutes intuitives Verständnis für geometrische Konstuktionen wie den projektiven Raum, Faserbündel, Produkte und Aufblasungen erreicht worden.

Remarks:

Wer MTH-1480 oder MTH-1481 oder MTH-1482 bereits bestanden hat, kann für dieses Modul nicht zugelassen werden: die Inhalte sind identisch.

Workload:

Total: 240 h

2 h exercise course (attendance)

4 h lecture (attendance)

Parts of the Module

Part of the Module: Algebraische Geometrie I

Mode of Instruction: lecture, exercise course

Language: German

Contact Hours: 6,00

Contents:

- Algebraische Varietäten
- Rationale Äquivalenz
- Divisoren
- Vektorbündel und Chernsche Klassen
- Kegel und Segresche Klassen
- Schnittprodukte
- Schnittmultiplizitäten
- Schnitte nicht-singulärer Varietäten
- Dynamisches Schnittverhalten
- Graßmannsche Varietäten
- Riemann-Rochscher Satz für nicht-singuläre Varietäten
- Bivariante Schnitttheorie
- Riemann-Rochscher Satz für singuläre Varietäten

Literature:

W. Fulton: Intersection Theory. Springer-Verlag.

I. Shafarevich: Basic Algebraic Geometry (I + II). Springer-Verlag.

Examination

Algebraische Geometrie

portfolio exam, graded

Test Frequency:

each semester

Description:

Eine Prüfungsanmeldung und eine Prüfung zu diesem Modul kann in jedem Semester erfolgen. In den Semestern, in denen die zugehörige Veranstaltung nicht stattfindet, werden die Kompetenzen abweichend in einer mündlichen Prüfung geprüft.

Module MTH-1489: Algebraic geometry II

Algebraische Geometrie II

8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Marc Nieper-Wißkirchen

Learning Outcomes / Competences:
Im Rahmen der Vorlesung haben die Studenten gelernt, ihr im Bachelorstudium im Bereich der Algebra erworbenes Wissen anhand konkreter Probleme aus der algebraischen Geometrie anzuwenden. Daneben ist neben einem mathematischen auch ein gutes intuitives Verständnis für geometrische Konstuktionen wie den projektiven Raum, Faserbündel, Produkte und Aufblasungen erreicht worden.

Remarks:
Wer MTH-1480 oder MTH-1481 oder MTH-1482 bestanden hat, kann für dieses Modul nicht zugelassen werden: die Inhalte sind identisch.

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions: none		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: every 4th semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any

Description:
Die genauen Prüfungsmodalitäten werden am Anfang der Vorlesung bekannt gegeben.

Module MTH-1518: Riemannian Geometry

Riemannsche Geometrie

8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Bernhard Hanke

Contents:
What is the geometry of our space? Euclidean? But how are we to know whether two parallels behind the next bush still have the same distance? How are we to judge geometry on a large scale, even in outer space, when we can hardly move away from our patch of earth? Riemannian geometry introduces a concept flexible enough to describe a geometry that looks locally Euclidean, but about whose global structure we may have no knowledge. The distinguishing feature from Euclidean geometry is curvature, the most important concept in this theory. We will study this geometry in small and large scale. Naturally, we will also cover the basics of Einstein's General Relativity, in which the geometry of space and time is coupled with the mass distribution in the universe.

Submanifolds of Euclidean space
Covariant derivative (Levi-Civita derivative)
Curvature
General relativity
Geodesics in the small and large
Completeness
Role of curvature for topology

Learning Outcomes / Competences:
Combining geometric thinking with analytical methods, understanding the interrelationships of local and global geometry.

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions:
Introduction to Geometry

this semester

Module MTH-1528: Differential Topology

Differentialtopologie

8 ECTS/LP

Version 1.0.0 (since SoSe25)
Person responsible for module: Prof. Dr. Bernhard Hanke

Contents:
This lecture is devoted to the theory of differentiable manifolds from the point of view of analysis and topology. The material covered is fundamental for a deeper understanding of differential geometry and global analysis.

Differentiable manifolds
Tangent space
Flows
Foliations
Fiber bundles
Transversality
de Rham cohomology
Chern-Weil theory
exotic spheres
H-Cobordism Theorem

Learning Outcomes / Competences:
Development and training of geometrical intuition while mastering modern mathematical language and reasoning. Understanding of the basic concepts of differential topology. Development of basic knowledge for special lectures in geometry and topology.

Remarks:
Cannot be combined together with MTH-1520.

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions:
Knowledge to elementary geometry and topology

Frequency: every 4th semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any

Module MTH-1538: Algebraic Topology

Algebraische Topologie

8 ECTS/LP

Version 1.0.0

Person responsible for module: Prof. Dr. Bernhard Hanke

Contents:

This module provides an introduction to algebraic topoolgy, that is, the systematic use of algebraic tools in the study of topological problems.

Mathematical content includes: Fundamental group, covering spaces, categories, cellular complexes, cellular and singular homology and cohomology, homotopy theory, fiber bundles.

Learning Outcomes / Competences:

Students will be able to use algebraic tools that allow them to translate geometric notion into exact arguments.

Remarks:

Dieses Modul kann nicht gleichzeitig mit MTH-1530 eingebracht werden

Workload:

Total: 240 h

Conditions:

Basic knowledge in algebra and geometry.

Frequency: every 4th semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Algebraische Topologie I

Language: English / German

Contact Hours: 6,00

Contents:

Dieses Modul bietet eine Einführung in die Algebraische Topoolgie, also die systematische Nutzung algebraischer Hilfsmittel beim Studium topologischer Fragestellungen.

Mathematische Inhalte sind unter anderem: Fundamentalgruppe, Überlagerungen, Kategorien, Zellkomplexe, zelluläre und singuläre Homologie und Kohomologie, Homotopietheorie, (Ko-)Faserungen

Lehr-/Lernmethoden:

Vorlesung und Übung

Module MTH-1548: Calculus of Variations

Variationsrechnung

8 ECTS/LP

Version 1.0.0

Person responsible for module: Prof. Dr. Bernd Schmidt

Learning Outcomes / Competences:

Die Student(inn)en kennen klassische Herangehensweisen sowie moderne Zugänge zu Problemen der Variationsrechnung. Sie sind in der Lage, theoretische Modelle naturwissenschaftlicher Probleme in einfachen Fällen selbst zu formulieren, solche Modelle aber auch in komplexen Situationen zu verstehen und problemorientiert zu analysieren.

Remarks:

Kann nicht gemeinsam mit MTH-1540 eingebracht werden

Workload:

Total: 240 h

2 h exercise course (attendance)

4 h lecture (attendance)

Conditions:

none

Credit Requirements:

Solide Analysiskenntnisse, die die wesentlichen Inhalte der Vorlesungen Analysis 1, 2 und 3 sowie der Funktionalanalysis abdecken.

Frequency: irregular

Recommended Semester:

1. - 4.

Minimal Duration of the Module:

1 semester[s]

Contact Hours:

6,00

Repeat Exams Permitted:

any

Parts of the Module

Part of the Module: Variationsrechnung

Language: English

Frequency: irregular

Workload:

2 Std. Übung (Präsenzstudium)

4 Std. Vorlesung (Präsenzstudium)

Contact Hours: 6,00

Contents:

klassische Probleme der Variationsrechnung, Euler-Lagrange-Gleichungen, Funktionenraeume, (semi-)konvexe Analysis, direkte Methode der Variationsrechnung, Anwendungen

Voraussetzungen: Solide Kenntnisse der mehrdimensionalen Differential- und Integralrechnung sowie der Grundlagen der Funktionalanalysis.

Literature:

Dacorogna: Direct Methods in the Calculus of Variations. Springer.

Examination

Variationsrechnung

portfolio exam, graded

Test Frequency:

not this semester

Module MTH-1558: Nonlinear Partial Differential Equations

Nichtlineare partielle Differentialgleichungen

8 ECTS/LP

Version 1.0.0

Person responsible for module: Prof. Dr. Bernd Schmidt

Learning Outcomes / Competences:

Die Student(inn)en kennen moderne Zugänge zu ausgewählten Beispielklassen in der Theorie der partiellen Differentialgleichungen. Sie sind in der Lage, aufbauend auf den Inhalten der Vorlesung Forschungsliteratur in diesen Gebieten zu lesen und sich selbstständig in weiterführende Aspekte einzuarbeiten.

Workload:

Total: 240 h

4 h lecture (attendance)

2 h exercise course (attendance)

Conditions:

none

Credit Requirements:

Solide Analysiskenntnisse, die die wesentlichen Inhalte der Vorlesungen Analysis 1, 2 und 3 sowie der Funktionalanalysis abdecken. Es wird dringend empfohlen, eine einführende Veranstaltung zu partiellen Differentialgleichungen gehört zu haben.

Frequency: irregular

Recommended Semester: 1. - 4.

Minimal Duration of the Module: 1 semester[s]

Contact Hours: 6,00

Repeat Exams Permitted: any

Module MTH-1568: Stochastic Differential Equations

Stochastische Differentialgleichungen

8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Dirk Blömker

Contents:
This module introduces the theory of stochastic differential equations.
Ito formula, Ito isometry, Ito integral, martingales, Brownian motion, existence and uniqueness theorem, diffusion processes, partial differential equations, Black-Scholes formula, Option pricing

Learning Outcomes / Competences:
The students know the fundamental terms, concepts and phenomena of stochastic
of stochastic analysis, especially of stochastic differential equations.
Ability to independently compile further literature
for applications in the field of financial mathematics and stochastic dynamics,
Competences in the independent processing of problems,
Skills in the formulation and processing of theoretical questions using the
theoretical questions with the help of the methods learned
Integrated acquisition of key qualifications:
Independent work with (English-language) scientific literature,
Scientific thinking, in-depth competences in the independent processing of problems, skills in formulating and processing theoretical questions.

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions:
A good basic knowledge of probability theory and analysis is required.
and calculus.
Helpful, but not absolutely necessary, is previous knowledge of
in ordinary differential equations
and stochastic processes.

Credit Requirements:
Oral exam

Frequency: each summer semester	**Recommended Semester:** 1. - 6.	**Minimal Duration of the Module:** 1 semester[s]

Module MTH-1578: Dynamical Systems

Dynamische Systeme

8 ECTS/LP

Version 1.0.0

Person responsible for module: Prof. Dr. Dirk Blömker

Contents:

among others: dynamical systems, attractors, invariant manifolds, semi-flows, Markov semigroups, invariant measures, iterated mappings, chaos

Learning Outcomes / Competences:

The students know the basic terms, concepts and phenomena in the field of
in the field of dynamical systems.
Ability to work independently on further literature,
Competences in the independent processing of problems,
Skills to formulate and work on theoretical questions using the
questions with the aid of the methods learnt.
Integrated acquisition of key qualifications:
Independent work with (English-language) scientific literature,
scientific thinking,
in-depth competences in the independent processing of problems,
Skills in formulating and working on theoretical questions.

Workload:

Total: 240 h
4 h lecture (attendance)

Module MTH-1588: Control Theory *Kontrolltheorie*		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Tatjana Stykel		
Learning Outcomes / Competences: Förderung von abstraktem Denken, Anwenden analytischer und geometrischer Methoden im Anwendungszusammenhang. Die Studenten sollen in einem mathematisch relativ einfachen, linearen Kontext die grundlegenden Fragestellungen der Kontrolltheorie und Konzepte zu deren Lösung lernen. Ferner sollen sie die Befähigung zum selbständigen Erarbeiten der aktuellen Forschungsliteratur erwerben.		
Workload: Total: 240 h 2 h exercise course (attendance) 4 h lecture (attendance)		
Conditions: none		
Frequency:	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Kontrolltheorie

Language: German
Frequency: irregular
Workload:
2 Std. Übung (Präsenzstudium)
4 Std. Vorlesung (Präsenzstudium)
Contact Hours: 6,00

Contents:

Dieses Modul führt in die mathematische Kontrolltheorie ein.

- Lineare Steuerungssysteme
- Steuerbarkeit und Beobachtbarkeit
- Rekonstruierbarkeit und Beobachtbarkeit
- Stabilität
- Stabilisierbarkeit und Entdeckbarkeit
- Polvorgabe
- Linear-quadratisches Optimierungsproblem

Voraussetzungen: Kenntnisse in Analysis auf endlich dimensionalen Räumen, gewöhnliche Differentialgleichungen, Numerik

Literature:

Knobloch, H.W., Kwakernaak, H. Lineare Kontrolltheorie. Springer, 1985

Sontag, E.: Mathematical Control Theory. Springer, 1998.

Hinrichsen, D., Pritchard, A.J.: Mathematical Systems Theory I. Springer, 2005.

Examination

Kontrolltheorie

oral exam / length of examination: 30 minutes, graded

not this semester

Module MTH-1598: Numerical Analysis of Partial Differential Equations

Numerik partieller Differentialgleichungen

8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Daniel Peterseim

Learning Outcomes / Competences:
Understanding of finite differences as well as the ideas of the finite element method generally as well as construction of Lagrange elements with respect to simplicial triangulations and a posteriori error estimation for elliptic problems; convergence results, connections between methods as well as their advantages and disadvantages, with respect to application to concrete problems in particular; complex algorithms; integrated acquisition of key qualifications: In small groups, students learn to define problems precisely, to develop numerical solution strategies and to assess their suitability, while developing social skills for working together in a team.

Remarks:
Kann nicht mit MTH-1590 gemeinsam eingebracht werden

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions:
Recommended: analysis (particularly functional analysis), introduction to numerical analysis, numerical analysis of ordinary differential equations

Frequency: each winter semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Numerik partieller Differentialgleichungen

Mode of Instruction: lecture + exercise
Lecturers: Prof. Dr. Malte Peter
Language: English / alle Sprachen
Frequency: each winter semester
Workload:
4 Std. Vorlesung (Präsenzstudium)
2 Std. Übung (Präsenzstudium)
Contact Hours: 6,00

Contents:
Es werden die Grundlagen der Standardmethoden zur numerischen Lösung partieller Differentialgleichungen behandelt.

Finite-Differenzen-Methode auf rechteckigen und nicht rechteckigen Gebieten
Finite-Elemente-Methode inkl. Triangulierung
Lagrange-Elemente
Adaptivität für elliptische Probleme

Module MTH-1668: Mathematical Statistics

Mathematische Statistik (Stochastik III)

8 ECTS/LP

Version 1.1.0
Person responsible for module: Prof. Dr. Sarah Friedrich

Contents:
Auswahl aus fortgeschrittenen Themen der Statistik, z.B.

nichtparametrische Methoden (z.B. Kerndichteschätzer), lineare Modelle, Markov-Ketten,
Bayessche Statistik
oder
Zeitreihenmodelle, ARMA-Prozesse, Parameter-Schätzung bei abhängigen Daten, Zustandsraum-Modelle

Learning Outcomes / Competences:
Verständnis der mathematischen Grundlagen bei den unter „Inhalte“ genannten fortgeschrittenen Themen der Statistik; Fähigkeit, Daten mit Hilfe von geeigneten Modellen zu analysieren und zu interpretieren; Kenntnisse von wichtigen statistischen Modellen und Schätzverfahren

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions:
Einführung in die Stochastik (Stochastik I) / Stochastik II

Lineare Algebra I und Analysis I und II

Frequency: each winter semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]

Verständnis der mathematischen Grundlagen bei den unter „Inhalte“ genannten fortgeschrittenen Themen der Statistik; Fähigkeit, Daten mit Hilfe von geeigneten Modellen zu analysieren und zu interpretieren; Kenntnisse von wichtigen statistischen Modellen und Schätzverfahren

Contents:
Auswahl aus fortgeschrittenen Themen der Statistik, z.B.

nichtparametrische Methoden (z.B. Kerndichteschätzer), lineare Modelle, Markov-Ketten,
Bayessche Statistik
oder
Zeitreihenmodelle, ARMA-Prozesse, Parameter-Schätzung bei abhängigen Daten, Zustandsraum-Modelle

Literature:

Themenabhängig - wird in der Vorlesung bekanntgegeben

Examination

Statistische Modelle und Verfahren (Stochastik III)

module exam, Klausur / length of examination: 90 minutes, graded

Test Frequency:

this semester

Module MTH-1678: Probability IV

Stochastische Prozesse (Stochastik IV)

8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Stefan Großkinsky

Learning Outcomes / Competences:
Die Studierenden sollen die nötigen mathematischen Konzepte zur Beschreibung zufälliger, zeitabhängiger Prozesse verstehen und mit ihnen umgehen können. Darüber hinaus sollen sie wichtige Beweiskonzepte und Konstruktionen aus dem Bereich der stochastischen Prozesse beherrschen.

Remarks:
Kann nicht gemeinsam mit MTH-1670 eingebracht werden

Workload:
Total: 240 h
4 h lecture (attendance)
2 h exercise course (attendance)

Conditions:
Lineare Algebra I
Analysis I
Analysis II
Einführung in die Stochastik (Stochastik I)
Einführung in die mathematische Statistik (Stochastik II)

Frequency: each summer semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Stochastische Prozesse (Heydenreich)

Lecturers: Prof. Dr. Markus Heydenreich
Language: English / German
Frequency: every 4th semester
Contact Hours: 6,00

Contents:

Es werden folgende Kernthemen behandelt:

1. Strenge Einführung des Begriffs "Stochastischer Prozess" und "Stochastisches Feld" mit Beispielen.
2. Pfadeigenschaften der Stochastischen Prozesse.
3. Gaußsche Prozesse, Lévy-Prozesse.
4. Brownsche Bewegung und ihre Eigenschaften.
5. Poisson-Prozess.
6. Irrfahrten und Konvergenz gegen Brownsche Bewegung.

Literature:

Wird in der Vorlesung bekannt gegeben.

Assigned Courses:

Stochastische Prozesse (Stochastik IV) (lecture + exercise)

*(in attendance) *

Part of the Module: Stochastische Prozesse (Großkinsky)

Lecturers: Prof. Dr. Stefan Großkinsky
Language: English / German
Frequency: every 4th semester
Workload:
2 Std. Übung (Präsenzstudium)
4 Std. Vorlesung (Präsenzstudium)
Contact Hours: 6,00

Contents:

- Prozesse in diskreter Zeit: Markov Ketten, Gaußsche Prozesse, Martingale
- Konstruktion stochastischer Prozesse nach Kolmogorov und Pfadeigenschaften
- Erneuerungsprozesse, Poisson Prozess, Markov Ketten in stetiger Zeit
- Diffusionsprozesse, Brownsche Bewegung
- Sprungprozesse, Lévy Prozesse

Literature:
Wird in der Vorlesung bekannt gegeben.

Assigned Courses:

Stochastische Prozesse (Stochastik IV) (lecture + exercise)
*(in attendance) *

Examination

Stochastische Prozesse (Stochastik IV)
oral exam / length of examination: 30 minutes, graded
Test Frequency:
only in the summer semester

Module MTH-1688: Optimisation IV (Global Optimisation)

Optimierung IV (Globale Optimierung)

8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Mirjam Dür

Learning Outcomes / Competences:
Nach der Teilnahme an diesem Modul verfügen die Studierenden über detailliertes und aktuelles Wissen auf dem Gebiet der Globalen Optimierung. Sie können Problemstellungen und Ergebnisse des Gebiets präzise beschreiben und diskutieren. Darüber hinaus verstehen die Studierenden grundlegende Konzepte, Methoden, Verfahren und Techniken aus dem genannten Gebiet und können diese in Entwicklungsprojekten anwenden und dort aktiv mitarbeiten. Außerdem verfügen sie über die Team- und Kommunikationsfähigkeit, um Problemstellungen auf dem Gebiet zu erörtern, Fragen und Zwischenergebnisse zu diskutieren und zu präsentieren.

Workload:
Total: 240 h

Conditions:
- Modul Einführung in die Optimierung (Optimierung I) (MTH-1140) - empfohlen
- Modul Nichtlineare und kombinatorische Optimierung (Optimierung II) (MTH-1200) - empfohlen
- Modul Kombinatorische Optimierung (Optimierung III) (MTH-1620) - empfohlen

Credit Requirements:
Bestehen der Modulprüfung

Frequency: irregular (usu. winter semester)	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Globale Optimierung (Optimierung IV)

Lecturers: Prof. Dr. Mirjam Dür
Language: German
Frequency: irregular (usu. winter semester)

Contents:
- Konvexe Relaxierungen und konvexe Hüllfunktionale
- D.C. Funktionen
- Quadratische Optimierungsprobleme
- Branch-and-Bound für boxrestringierte Probleme
- Branch-and-Bound für konvex restringierte Probleme
- Branch-and-Bound für nichtkonvexe Probleme
- Heuristiken

Literature:

- O.Stein: Grundzüge der Globalen Optimierung. Springer Verlag 2018
- M.Locatelli, F.Schoen: Global Optimization. SIAM 2013
- R.Horst, P.Pardalos, N.V.Thoai: Introduction to Global Optimization. Kluwer Academic Publishers 1995

Examination

Globale Optimierung (Optimierung IV)

module exam, Der konkrete Typ der Modulprüfung (Klausur oder mündliche Prüfung oder Portfolio) wird jeweils spätestens eine Woche vor Beginn der Veranstaltung bekannt gegeben., graded

this semester

Module MTH-1698: Parabolic Partial Differential Equations *Parabolische partielle Differentialgleichungen*	8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Dirk Blömker	
Contents: selected topics in parabolic PDEs, existence and uniqueness of solutions, energy estimates, dynamics	
Learning Outcomes / Competences: The students know modern approaches to selected example classes in the theory of parabolic partial differential equations. They are able to read research literature in these areas based on the contents of the lecture and to work independently on further aspects.	
Workload: Total: 240 h	
Conditions: Prerequisites: Solid knowledge of multidimensional differential and integral calculus, functional analysis. Knowledge of ordinary differential equations or the weak solution theory of linear elliptic equations is helpful.	**Credit Requirements:** oral exam

Frequency: irregular	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Parabolische partielle Differentialgleichungen

Language: English
Frequency: irregular
Contact Hours: 6,00

Contents:

Voraussetzungen: Solide Kenntnisse der mehrdimensionalen Differential- und Integralrechnung, Funktionalanalysis. Hilfreich sind Kenntnisse in gewöhnlichen Differentialgleichungen oder der schwachen Lösungtheorie linearer elliptischer Gleichungen.

Examination

Parabolische partielle Differentialgleichungen

oral exam / length of examination: 30 minutes, graded

Module MTH-1860: Introduction to Projective Geometry *Einführung in die Projektive Geometrie*	6 ECTS/LP

Version 1.0.0 (since WS15/16)
Person responsible for module: apl. Prof. Dr. Dirk Hachenberger

Contents:
Die Projektive Geometrie ist eines der klassischen Teilgebiete der Reinen Mathematik. Dieses Gebiet ist ursprünglich aus Fragen der Perspektive entstanden und kann heutzutage kurz als "Lineare Algebra vom geometrischen Standpunkt aus gesehen" bezeichnet werden. Alle notwendigen geometrischen Begriffe werden in der Vorlesung entwickelt werden. Neben den klassischen Fragestellungen (Einführung von Koordinaten, Kollineationen, Projektivitäten, Kegelschnitte und Quadriken...) sollen insbesondere die endlichen projektiven Räume behandelt werden. Diese Strukturen haben durch Bezüge zu Designs, Codes und Kryptosystemen neuerdings auch eine gewisse Bedeutung in den Anwendungen erlangt. Einige derartige Aspekte sollen ebenfalls angesprochen werden.

Learning Outcomes / Competences:
Erkenntnis der engen Verflechtung von Algebra und Geometrie; Mathematische Allgemeinbildung (Einblick in eines der klassischen Gebiete der Mathematik, das derzeit im Studium fast immer zu kurz kommt.

Workload:
Total: 180 h
4 h lecture (attendance)

Conditions:
Module Linear Algebra I (MTH-1000) - recommended
Module Linear Algebra II (MTH-1010) - recommended

Frequency: irregular	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Einführung in die Projektive Geometrie
Mode of Instruction: lecture
Language: German
Frequency: irregular
Workload:
4 Std. Vorlesung (Präsenzstudium)
Contact Hours: 4,00
ECTS Credits: 6.0

Learning Outcome:
Erkenntnis der engen Verflechtung von Algebra und Geometrie; Mathematische Allgemeinbildung (Einblick in eines der klassischen Gebiete der Mathematik, das derzeit im Studium fast immer zu kurz kommt.

Module MTH-1900: Introduction to Cryptography

Einführung in die Kryptographie

6 ECTS/LP

Version 1.0.0 (since WS15/16)
Person responsible for module: apl. Prof. Dr. Dirk Hachenberger

Contents:
Die Kryptographie ist dasjenige Teilgebiet der Mathematik, das sich mit der sicheren Übermittlung geheim zu haltender Nachrichten bzw. umgekehrt mit der Analyse verschlüsselter Texte beschäftigt. Derartige Themenbereiche sind von zunehmender wirtschaftlicher Bedeutung (Electronic Banking). Dabei ergeben sich viele interessante Fragestellungen wie z.B. die Möglichkeit von elektronischen Unterschriften und Zeitstempeln sowie Fragen der Authentifikation und Zugangskontrolle. In der Vorlesung soll eine Einführung in die wichtigsten Probleme und Methoden der Kryptographie gegeben werden. Nach einer kurzen historischen Einleitung werden auch einige praktisch verwendete Systeme (DES, AES, RSA-System) behandelt.

Learning Outcomes / Competences:
Algebra, Zahlentheorie und Kombinatorik sind klassische Kerngebiete der Reinen Mathematik. Die Studenten sollen an einem konkreten Beispiel erkennen, dass auch diese Teile der Mathematik praktisch relevante Anwendungen hat.

Workload:
Total: 180 h
4 h lecture (attendance)

Conditions:
Als Voraussetzungen werden lediglich die Grundvorlesungen in Linearer Algebra I und II sowie elementare Wahrscheinlichkeitstheorie benötigt.

Frequency: irregular	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** any

Module MTH-1928: Nonlinear Control Theory *Nichtlineare Kontrolltheorie*		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Fritz Colonius		
Learning Outcomes / Competences: Vertiefte Einsicht in die geometrische Interpretation von kontrolltheoretischen Objekten und Konzepten, die hier nichtlinearen Charakter haben und differentialgeometrische Methoden erfordern. Die Studenten sollen in die Lage versetzt werden, diese Strukturen im Anwendungszusammenhang (hier. in der Regelungstheorie) selbständig zu erkennen und die in der Veranstaltung behandelten Methoden einzusetzen. Darüber hinaus sollen sie in die Lage versetzt werden., aktuelle Forschungsliteratur selbständig zu erarbeiten.		
Workload: Total: 240 h 4 h lecture (attendance) 2 h exercise course (attendance)		
Conditions: none		
Frequency:	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Nichtlineare Kontrolltheorie

Language: German
Frequency: each semester
Workload:
4 Std. Vorlesung (Präsenzstudium)
2 Std. Übung (Präsenzstudium)
Contact Hours: 6,00

Contents:
Dieses Modul bietet eine Einführung in die Theorie Nichtlinearer Kontrollsysteme
Akzessibilität und Lie-algebraische Bedingungen
Kontrollmengen
Beziehungen zur Theorie dynamischer Systeme
Voraussetzungen:

Literature:
Sastry: Nonlinear Systems. Springer.
Jurdjevic: Geometric Control Theory. Cambridge.
Coron: Control and Nonlinearity. American Mathematical Society.

Examination

Nichtlineare Kontrolltheorie
oral exam / length of examination: 30 minutes, graded

Module MTH-1950: Coding Theory

Codierungstheorie

6 ECTS/LP

Version 1.0.0 (since WS15/16)
Person responsible for module: apl. Prof. Dr. Dirk Hachenberger

Contents:
Die Codierungstheorie ist eine relativ junge mathematische Disziplin, die sich mit dem Entwurf von optimalen fehlererkennenden und fehlerkorrigierenden Codes beschäftigt.
Solche Codes werden überall dort verwendet, wo Informationen (bildlich gesprochen) über einen gestörten Nachrichtenkanal übertragen werden: Durch eine geeignete Codierung der Information vor der Sendung, ist es möglich auch bei Verfälschung die ursprüngliche Nachricht zu rekonstruieren.
Zu den wichtigsten Anwendungen gehören die Übertragung von Satellitenbildern sowie die Verbesserung der Qualität beim Abspielen von Compact Discs. Der mathematische Reiz der Codierungstheorie liegt im Zusammenspiel von Algebra, Kombinatorik und Zahlentheorie, zumal die sog. linearen Codes über endlichen Körpern sehr erfolgreich in der Praxis eingesetzt werden.

Nach einer Einführung und der Formulierung der Hauptproblemstellung verfolgen wir in dieser Vorlesung das Ziel, einige der wichtigsten Klassen von (optimalen) Codes zu beschreiben:

- Dazu zählen zunächst die *Hamming-Codes* und die *Reed-Solomon Codes*, die zur allgemeineren Familie der *zyklische Codes*, insbesondere den BCH-Codes gehören.
- Die *Reed-Muller-Codes* dienen als Ausgangspunkt für die Konstruktion der (optimalen) *Kerdock-* und *Preparata-Codes.*
- Die grundlegenden *Goppa-Codes* sind im Rahmen der *Funktionenkörper-Codes* mittlerweile vielfach verallgemeinert worden.

Learning Outcomes / Competences:
Algebra, Kombinatorik und Zahlentheorie sind klassische Kerngebiete der Mathematik. An dem konkreten Beispiel der Codierungstheorie sollen die Studierenden erkennen, dass durch das Zusammenspiel sehr interessante praktische Problemstellungen adäquat modelliert und gelöst werden können.

Workload:

Parts of the Module

Part of the Module: Liegruppen und ihre Darstellungen

Language: German

Workload:

2 Std. Übung (Präsenzstudium)

4 Std. Vorlesung (Präsenzstudium)

Contact Hours: 6,00

Contents:

Symmetrien werden in der Mathematik durch Gruppen beschrieben. Für den Würfel zum Beispiel gibt es 24 nicht unterscheidbare (achsenparallele) Positionen, deren Übergänge durch eine Gruppe von 24 Drehungen beschrieben werden. Neben solchen diskreten Symmetrien gibt es auch kontinuierliche, wie zum Beispiel bei der Kugel: Sie lässt sich durch beliebige Drehungen um ihr Zentrum in eine andere, ununterscheidbare Lage bringen. Solche Symmetrien werden durch kontinuierliche Gruppen, sog. Lie-Gruppen beschrieben (nach dem norwegischen Mathematiker Sophus Lie benannt). Das einfachste nichttriviale Beispiel ist die Gruppe aller Drehungen um den Ursprung im euklidischen Raum, die Drehgruppe SO(3). Sie ist nicht nur eine Gruppe, sondern gleichzeitig eine differenzierbare Mannigfaltigkeit (eine Untermannigfaltigkeit im Vektorraum aller reellen 3x3-Matrizen), und die Gruppenoperationen sind differenzierbare Abbildungen. Die Drehgruppe wirkt durch Transformationen auf der Kugel und kennzeichnet damit die Symmetrien der Kugel. Mit jeder abstrakten Gruppe ist also auch ihre Wirkung durch Transformationen auf bestimmten Räumen (anderen Mannigfaltigkeiten) von Bedeutung. Die einfachsten Wirkungen sind die linearen: das sind differenzierbare Gruppenhomomorphismen von eine Gruppe G in eine Matrizengruppe, d.h. in die Gruppe der invertierbaren linearen Abbildungen auf einem Vektorraum. Die Gruppe SO(3) wirkt linear auf dem dreidimensionalen euklidischen Raum, aber sie kann auch noch auf andere Arten als Matrizengruppe dargestellt werden: Eine Drehmatrix A konjugiert eine symmetrische spurfreie 3x3-Matrix S zu einer anderen solchen Matrix S' = ASA* ; damit bewirkt A eine lineare Transformation S nach S' auf dem 5-dimensionalen Vektorraum der spurfreien symmetrischen reellen 3x3-Matrize n. Damit haben wir eine 5-dimensionale Darstellung der Gruppe SO(3). Ziel der Vorlesung ist es, die Kompakten Liegruppen und ihre Darstellungen (Stichwort: Weylsche Charakterformel) zu verstehen.

Module MTH-1998: Graph Theory

Graphentheorie

8 ECTS/LP

Version 1.0.0
Person responsible for module: apl. Prof. Dr. Dirk Hachenberger

Learning Outcomes / Competences:
Graphen dienen praktisch als Standardmodell für jede Art von Objekten, die mit einer binären Relation versehen sind. Anhand ausgewählter Themengebiete erwerben Studierende anhand des Studiums grundlegender Problemstellungen ein tieferes Verständnis für diskrete Strukturen. Dabei wird insbesondere die algebraische, kombinatorisch und zahlentheoretische Denkweise geschult.

Remarks:
Die Module MTH-1990 und MTH-1991 unterscheiden sich im Aufwand (SWS und LP), sind aber inhaltlich nahezu identisch. Daher dürfen Studierende nur eines dieser beiden Module einbringen.

Workload:
Total: 240 h

Conditions:	**Credit Requirements:**
Lineare Algebra I und II, Grundlagen der Algebra, der Kombinatorik und der elementaren Zahlentheorie	Bestehen der Modulprüfung Ausschluss-Bedingung: Dieses Modul darf nicht eingebracht werden, wenn das Modul MTH-1990 bereits eingebracht wurde!

Frequency: irregular	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]

Module MTH-2010: Numerics of Stochastic Differential Equations *Numerik Stochastischer Differentialgleichungen*	6 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Dirk Blömker	
Contents: numerical method for stochastic differential equations, Euler-Maruyama, weak and strong convergence, error estimates	
Learning Outcomes / Competences: The students know the basic terms, concepts and phenomena of the numerical treatment of stochastic differential equations. of the numerical treatment of stochastic differential equations, can implement the corresponding algorithms and are familiar with the basics of stochastic analysis. Ability to work independently on further literature. Competences in the independent processing and implementation of numerical algorithms, Skills in formulating and working on theoretical and applied problems using the and applied questions with the help of the methods learnt. Integrated acquisition of key qualifications: Independent work with (English-language) scientific literature, working with scientific computers, in-depth competences in the independent processing of problems, Skills in formulating and working on applied questions.	
Workload: Total: 180 h 2 h exercise course (attendance) 2 h lecture (attendance)	
Conditions: knowledge in stochastic differential equations and numerical methods for ordinary differential equations are helpful	**Credit Requirements:** oral exam

Frequency: irregular	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Numerik Stochastischer Differentialgleichungen

Language: German / English
Frequency: irregular
Workload:
2 Std. Übung (Präsenzstudium)
2 Std. Vorlesung (Präsenzstudium)
Contact Hours: 4,00
ECTS Credits: 6.0

Contents:

Dieses Modul führt in die Theorie der numerischen Behandlung stochastischer Differentialgleichungen ein.
Stochastische Differentialgleichungen
Zeitdiskretisierung
Fehlerabschätzungen
Implementierung numerischer Verfahren
Spektrales Galerkinverfahren für stochastische partielle DGL
Voraussetzungen: Die Vorlesung verwendet die grundlegende Theorie stochastischer Differentialgleichungen.
Zwingend notwendig ist ein gutes Grundwissen in der Wahrscheinlichkeitstheorie,
stochastischen Prozessen und der Analysis.
Hilfreich, aber nicht zwingend notwendig, sind Vorkenntnisse
in gewöhnlichen Differentialgleichungen und Numerik gewöhnlicher Differentialgleichungen,
sowie Programmiererfahrung.

Examination

Numerik Stochastischer Differentialgleichungen

oral exam / length of examination: 30 minutes, graded

Module MTH-2030: Parametric Optimisation

Parametrische Optimierung

5 ECTS/LP

Version 1.0.0 (since SoSe17)
Person responsible for module: Prof. Dr. Ralf Werner

Contents:
- Parametrische lineare Optimierung
- Parametrische unrestringierte nicht-lineare Optimierung
- Parametrische restringierte nicht-lineare Optimierung
- Anwendungen

Learning Outcomes / Competences:
- Erarbeitung der mathematischen Grundlagen der parametrischen Optimierung
- Qualifizierung zur Anwendung in Theorie und Praxis
- Befähigung zum selbständigen Erarbeiten weiterführender Fachliteratur

Remarks:
Die Veranstaltung wird vorzugsweise als Blockveranstaltung angeboten.

Workload:
Total: 150 h
3 h lecture and exercise course (attendance)

Conditions:
- Kenntnisse in Optimierung (etwa im Umfang von Optimierung I und II)
- Kenntnisse in numerischen Optimierungsverfahren (etwa Numerische Verfahren der nicht-linearen Optimierung)
- Grundkenntnisse in Funktionalanalysis

Credit Requirements:
Bestehen der Modulprüfung

Frequency: irregular	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 3,00	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module MTH-2058: Numerical Optimisation Methods for Business Mathematics (Numerical Methods for Business Mathematics I)

Numerische Optimierungsverfahren der Wirtschaftsmathematik (Numerische Verfahren der Wirtschaftsmathematik I)

8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Tatjana Stykel

Contents:
Numerische Optimierungsverfahren

Learning Outcomes / Competences:
Verständnis der grundlegenden Fragestellungen der linearen und quadratischen Programmierung sowie allgemeiner Minimierungsprobleme inkl. Algorithmik und Konvergenzanalyse; Kenntnisse der einfachsten Verfahren zur Lösung endlichdimensionaler Optimierungsprobleme, insbesondere mit Nebenbedingungen; integrierter Erwerb von Schlüsselqualifikationen: Die Studierenden lernen in Kleingruppen, Problemstellungen präzise zu definieren, numerische Lösungsstrategien zu entwickeln und deren Tauglichkeit abzuschätzen, dabei wird die soziale Kompetenz zur Zusammenarbeit im Team weiterentwickelt.

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions:
Programmierkenntnisse, grundlegende Kenntnisse der Numerik

Frequency: jedes 3. Semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any

Language: German
Frequency: jedes 3. Semester
Workload:
2 Std. Übung (Präsenzstudium)
4 Std. Vorlesung (Präsenzstudium)
Contact Hours: 6,00

Contents:
Numerische Verfahren der linearen und nichtlinearen Optimierung, insbesondere Optimierung ohne und mit Nebenbedingungen, quadratische und sequentielle quadratische Optimierung

Examination
Numerische Optimierungsverfahren der Wirtschaftsmathematik (Numerische Verfahren der Wirtschaftsmathematik I)
portfolio exam / length of examination: 30 minutes, graded
Test Frequency:
not this semester

Module MTH-2068: Numerical Methods of Financial Mathematics *Numerische Verfahren der Finanzmathematik (Numerische Verfahren der Wirtschaftsmathematik II)*	8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Malte Peter

Contents:
Finanzmathematik und zugehörige numerische Verfahren

Learning Outcomes / Competences:
Verständnis der grundlegenden Fragestellungen der Finanzmathematik und der einfachsten numerischen Verfahren zur Lösung der zugrundeliegenden Probleme inkl. Algorithmik und Konvergenzanalyse; Kenntnisse der Grundlagen der Optionspreisbewertung inkl. Black-Scholes-Modell, der Monte-Carlo-Methoden, der stochastischen Differentialgleichungen und deren numerischer Lösung sowie der Finite-Differenzen-Approximationen zur Lösung parabolischer Probleme; integrierter Erwerb von Schlüsselqualifikationen: Die Studierenden lernen in Kleingruppen, Problemstellungen präzise zu definieren, numerische Lösungsstrategien zu entwickeln und deren Tauglichkeit abzuschätzen, dabei wird die soziale Kompetenz zur Zusammenarbeit im Team weiterentwickelt.

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions:
Grundlegende Kenntnisse der Numerik und der Stochastik

Frequency: each semester 24/25	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Numerische Verfahren der Finanzmathematik (Numerische Verfahren der Wirtschaftsmathematik II)
Mode of Instruction: lecture + exercise
Language: German
Frequency: every 4th semester
Workload:
2 Std. Übung (Präsenzstudium)
4 Std. Vorlesung (Präsenzstudium)
Contact Hours: 6,00

Contents:
Bewertung von Optionen, insbesondere Grundlagen der Optionsbewertung, Ito-Kalkül, Black-Scholes-Formel und Black-Scholes-Gleichungen, Monte-Carlo-Methoden und Finite-Differenzen-Verfahren

Assigned Courses:

Numerische Verfahren der Finanzmathematik (lecture)

Module MTH-2100: Design Theory *Design Theorie*		3 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Dirk Hachenberger		
Contents: Es handelt sich um eine Einführung in die Design Theorie (Blockpläne) unter Betonung der algebraischen Aspekte (Symmetriegruppen) oder Auflistung von Themen.		
Learning Outcomes / Competences: Anwendbarkeit algebraischer Denkweisen in einem kombinatorischen Zusammenhang.		
Workload: Total: 90 h 2 h lecture (attendance)		
Conditions: Gründliche Kenntnis der Linearen Algebra (insbesondere Eigenwerte, Determinanten und symmetrische Bilinearformen). Grundlagen aus der Algebra (Gruppen, Ringe, Körper).		
Frequency: irregular	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 2,00	**Repeat Exams Permitted:** any

Module MTH-2118: Continuous Time Finance

Zeitstetige Finanzmathematik

8 ECTS/LP

Version 1.0.0

Person responsible for module: Prof. Dr. Ralf Werner

Contents:

Brownsche Bewegung und stochastische Integration (Ito Formel)
Finanzmarktmodelle in stetiger Zeit (Semimartingalmodelle)
Arbitrage
Vollständigkeit
Hauptsatz der Finanzmathematik
Black-Scholes Modell
Bewertung und Hedging in unvollständigen Märkten

Learning Outcomes / Competences:

Erarbeitung der mathematischen Grundlagen für die Bewertung und das Hedgen von Derivaten
Qualifizierung zur Anwendung in Banken, Versicherungen und Asset Management
Befähigung zum selbständigen Erarbeiten weiterführender Fachliteratur

Workload:

Total: 240 h
4 h lecture (attendance)
2 h exercise course (attendance)

Conditions:	**Credit Requirements:**
Diskrete Finanzmathematik Stochastik IV	Bestehen der Modulprüfung

Frequency: irregular	**Recommended Semester:**	**Minimal Duration of the Module:**

Module MTH-2218: Stochastic Evolution Equations

Stochastische Evolutionsgleichungen

8 ECTS/LP

Version 1.0.0

Person responsible for module: Prof. Dr. Dirk Blömker

Contents:

Infinite dimensional spaces
Fourier series and transforms
cylindrical Wiener processes
analytic semigroups
stochastic evolution equations
stochastic dynamical systems

Learning Outcomes / Competences:

The students know the basic terms, concepts and phenomena in the field of stochastic evolution equations and stochastic dynamic systems.
Ability to work independently on further research literature, competences in the independent processing of problems, skills in the formulation and processing of theoretical questions with the help of the methods learned.
Integrated acquisition of key qualifications:
Independent work with (English-language) scientific literature, scientific thinking,
deepened competences in the independent processing of problems.

Workload:

Total: 240 h

Conditions:

Knowledge of calculus on infinite dimensional spaces and basic knowledge of stochastics.

Frequency: irregular	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any

Module MTH-2228: Adaptive Finite Element Methods

Adaptive Finite Elemente-Verfahren

8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Daniel Peterseim

Contents:
Diese Vorlesung betrachtet fortgeschrittene Finite-Elemente-Verfahren mit folgenden Inhalten:

In dieser Vorlesung werden Theorie und Implementierung fortgeschrittener Finite-Elemente-Verfahren betrachtet. Dies beinhaltet die folgenden Themengebiete:
1. Residuenbasierte und hierarchische Fehlerschätzer
2. Effizienz und Zuverlässigkeit von Fehlerschätzern
3. Implementierung adaptiver finiter Elemente mit hängenden Knoten
4. Dual gewichtete Residuen
5. Unstetige Galerkin-Verfahren (discontinuous Galerkin, DG) für Transportprobleme
6. DG-Verfahren für Erhaltungsgleichungen

Learning Outcomes / Competences:
In dieser Vorlesung werden Theorie, Anwendung und Implementierung fortgeschrittener Finite-Elemente-Verfahren erlernt, mit einem Schwerpunkt auf A-Posteriori-Fehlerschätzer für Finite Elemente-Approximationen partieller Differentialgleichungen sowie nicht-konforme Finite-Elemente-Verfahren.

Workload:
Total: 240 h
2 h exercise course (attendance)
4 h lecture (attendance)

Conditions:
Numerik partieller Differentialgleichungen

Frequency: irregular	**Recommended Semester:** 2. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any

Module MTH-2257: Symplectic Geometry *Symplectic Geometry*		8 ECTS/LP
Version 1.0.0 (since SoSe25) Person responsible for module: Prof. Dr. Kai Cieliebak		
Learning Outcomes / Competences: Learning about techniques of symplectic geometry and their applications in the theory of classical mechanical systems.		
Remarks: Cannot be combined together with MTH-2250.		
Workload: Total: 240 h		
Conditions: none		**Credit Requirements:** Passing the module exam.
Frequency: every 4th semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Symplectic Geometry and Hamiltonian Dynamics

Language: English / German
Frequency: every 4th semester
Contact Hours: 6,00

Contents:

This course is an introduction to symplectic techniques in the theory of Hamiltonian systems. It covers the following topics: Hamilton's equations, symplectic manifolds, symmetries and Noether's theorem, symplectic reduction, rigid bodies, integrable systems, stability and the KAM theorem, chaos, applications to celestial mechanics, fluid dynamics, and quantum mechanics.

Voraussetzungen: Basic differential geometry (manifolds, differential forms)

Literature:

V.I.Arnold, Mathematical Methods of Classical Mechanics (Springer)
H.Hofer and E.Zehnder, Symplectic Invariants and Hamiltonian Dynamics (Birkhaeuser)

Examination

Module MTH-2380: Bayesian Statistics and Econometrics

Bayessche Statistik und Ökonometrie

6 ECTS/LP

Version 2.0.0 (since SoSe17)
Person responsible for module: Prof. Dr. Gernot Müller

Learning Outcomes / Competences:
Verständnis der mathematischen Konzepte in der Bayesschen Statistik, Kenntnisse über Vor- und Nachteile der Bayesschen Statistik gegenüber der frequentistischen Statistik, Kenntnisse über Einsatzmöglichkeiten der Bayesschen Statistik in der Ökonometrie,
Fähigkeit, Bayessche Verfahren bei praktischen Problemen selbstständig einzusetzen.

Workload:
Total: 180 h
3 h lecture (attendance)
1 h exercise course (attendance)

Conditions:
Stochastik I, Stochastik II

Frequency: every 4th semester	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Module MTH-2581: Advanced Survival Analysis

Advanced Survival Analysis

8 ECTS/LP

Version 1.3.0 (since WS22/23)
Person responsible for module: Prof. Dr. Sarah Friedrich

Contents:

- Besonderheiten von Überlebenszeitdaten: Zensierung/Trunkierung
- Martingale, Zählprozesse, stochastische Integrale
- Nelson-Aalen, Kaplan-Meier und Aalen-Johansen Schätzer
- Konkurrierende Risiken und Mehrstadienmodelle
- Cox Regression
- Asymptotik (schwache Konvergenz, gleichmäßige Konsistenz), Martingaltheorie

Learning Outcomes / Competences:
Nach der Teilnahme an diesem Modul verfügen die Studierenden über detailliertes und aktuelles Wissen auf dem Gebiet der Überlebenszeitanalyse (Survival Analysis). Sie können Problemstellungen und Ergebnisse des Gebiets präzise beschreiben und diskutieren. Darüber hinaus verstehen die Studierenden mathematische Konzepte, Methoden, Verfahren und Techniken, um Ereigniszeitdaten zu analysieren.

Workload:
Total: 240 h
4 h lecture (attendance)
2 h exercise course (attendance)

Conditions: Stochastik I + II		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: irregular	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]

Module MTH-2600: Nonparametric Statistics

Nichtparametrische Statistik

6 ECTS/LP

Version 1.0.0 (since WS22/23)
Person responsible for module: Prof. Dr. Sarah Friedrich

Contents:

- Besonderheiten der nichtparametrischen Statistik: Nichtparametrische Effekte und Hypothesen im Vergleich zur parametrischen und semi-parametrischen Statistik
- Empirische Verteilungen und Ränge
- Relative Effekte und deren Schätzer
- Einfaktorielle Versuchspläne: Wilcoxon-Mann-Whitney-Test, das nichtparametrische Behrens-Fischer-Problem, Kruskal-Wallis-Test
- Mehrfaktorielle Versuchspläne

Learning Outcomes / Competences:

Nach der Teilnahme an diesem Modul kennen die Studierenden den Unterschied zwischen der nichtparametrischen und der parametrischen Datenanalyse. Sie erkennen, wann eine nichtparametrische Datenanalyse notwendig ist, sind mit den Grundbegriffen der Rangstatistiken vertraut, können Rangverfahren für ausgewählte faktorielle Versuchspläne durchführen und kennen deren theoretische, mathematische Grundlagen.

Workload:

Total: 180 h
2 h exercise course (attendance)
2 h lecture (attendance)

Conditions: Stochastik I und II		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: irregular (usu. winter semester)	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]

Module MTH-2670: Computational Algebraic Geometry

Computational Algebraic Geometry

6 ECTS/LP

Version 1.0.0 (since SoSe24)
Person responsible for module: Prof. Dr. André Uschmajew

Contents:
1. Polynomial Rings
2. Gröbner Bases
3. Elimination Theory
4. Computer Algebra Systems
5. Applications

Learning Outcomes / Competences:
In this lecture we will learn about the algebra and the geometry of nonlinear polynomial equations. We will develop the theory of polynomial algebra and we will discuss how to solve these systems algorithmically using computer algebra. Depending on time and interest of the participants, we will see selected applications in statistics and data science.

Workload:
Total: 180 h

Conditions: Linear Algebra. A course in abstract algebra is useful but not necessary.		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: irregular	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4,00	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module MTH-2698: Inverse Problems

Inverse Probleme

8 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr. Jan-Frederik Pietschmann

Contents:
* Charakterisierung inverser Aufgaben anhand von angewandten Beispielen aus der Mathematik, den Naturwissenschaften und dem Ingenieurwesen
* die Hadamard'sche Korrektheitsdefinition und das Phänomen der Inkorrektheit
* Inverse Probleme als lineare und nichtlineare Operatorgleichungen in Banach- und Hilberträumen mit Schwerpunkt auf linearen Problemen
* Singulärwertzerlegung kompakter Operatoren und Grad der Inkorrektheit
* Theorie und Praxis der Regularisierung inkorrekter Aufgaben mit Mitteln der Analysis, Numerik, Optimierung und Stochastik
* Konvergenzraten und Quelldarstellungen
* Statistische Inverse Probleme

Learning Outcomes / Competences:
Ziel dieses Moduls ist die Einführung in die Mathematik inverser Probleme, wobei sowohl die angewandte Komponente (naturwissenschaftlich-technische und ökonomische Probleme inverser Natur) als auch die theoretische Komponente (funktionalanalytische Behandlung, Nutzung von Techniken der Analysis, Numerik, Optimierung und Stochastik) eine unverzichtbare Rolle spielen. Die Studenten erwerben die Kompetenz zum Erkennen inverser Problemstellungen und ihrer Instabilität und zum Überwinden der spezifischen Probleme durch angepasste Techniken der Regularisierung mittels objektiver und subjektiver Apriori-Informationen im Rahmen mathematischer Handwerkszeuge.

Remarks:
Kann nicht gemeinsam mit MTH-2690 eingebracht werden

Workload:
Total: 240 h

Conditions:		**Credit Requirements:**

Module MTH-2708: Advanced Discrete Probability

Fortgeschrittene Themen der diskreten Wahrscheinlichkeitstheorie

8 ECTS/LP

Version 1.0.0 (since SoSe25)
Person responsible for module: Prof. Dr. Markus Heydenreich

Learning Outcomes / Competences:
Studierende lernen in diesem Kurs aktive Forschungsgebiete der diskreten Wahrscheinlichkeitstheorie kennen. Sie kennen wesentliche Theorielinien und können den Beweis zentraler Resultate skizzieren. Sie sind in der Lage mit den erlernten Techniken eigene Beweise zu erarbeiten.
Integrierter Erwerb von Schlüsselqualifikationen: Eigenständiges Arbeiten mit (englischsprachiger) wissenschaftlicher Literatur, wissenschaftliches Denken, vertiefte Kompetenzen in der selbständigen Bearbeitung von Problemstellungen

Workload:
Total: 240 h

Conditions:
Lineare Algebra I
Analysis I
Analysis II
Stochastik I
Stochastik II (kann parallel gehört werden)

Credit Requirements:
Bestehen der Modulprüfung

Frequency: irregular

Recommended Semester:
1. - 4.

Minimal Duration of the Module:
1 semester[s]

Contact Hours:
6,00

Repeat Exams Permitted:
according to the examination regulations of the study program

Parts of the Module

Part of the Module: Fortgeschrittene Themen der diskreten Wahrscheinlichkeitstheorie
Language: English / German
Contact Hours: 6,00

Contents:
Im Kurs werden Studierende anhand ausgewählter Themen in aktuelle Forschungsthemen aus der diskreten Wahrscheinlichkeitstheorie eingeführt. Dabei werden sowohl grundlegende Beweistechniken erarbeitet also auch einige der neuesten Resultate präsentiert.
Themen und Format variieren, im Sommersemester 2025 findet ein Lesekurs zur Mathematischen Statistischen Physik statt.

Examination

Module MTH-2738: Homotopy Theory *Homotopietheorie*		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Wolfgang Steimle		
Learning Outcomes / Competences: Die Studierenden lernen grundlegende Konzepte, Techniken und Resultate der modernen Homotopietheorie und wissen, wie man sie in verschiedenen Bereichen der Geometrie und Algebra anwenden kann.		
Workload: Total: 240 h		
Conditions: keine		
Frequency: irregular	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:**	

Parts of the Module

Part of the Module: Modulteil: Homotopietheorie
Language: German / English
Contact Hours: 6,00

Contents:

Die moderne Homotopietheorie ist eine axiomatische Theorie, die auf so unterschiedliche Bereichen der Mathematik wie Topologie, algebraischer Geometrie, Operatortheorie und Darstellungstheorie gleichermaßen anwendbar ist, und in deren Zentrum der Begriff von unendlich-Kategorien steht. Die Vorlesung bietet einen Einstieg in die moderne Homotopietheorie aus praxisorientierter Sicht, d. h. im Vordergrund steht nicht der systematische Aufbau der Theorie, sondern ein möglichst schneller Weg zu den zentralen Konzepten. Im Vordergrund steht dabei das Erlernen der kategoriellen Sprache und Techniken und der Überblick über verschiedene Anwendungen in unterschiedlichen Bereichen der Mathematik.

Examination

Module MTH-2758: High-Dimensional Probability with Applications to Data Science

Hochdimensionale Wahrscheinlichkeitstheorie mit Anwendungen in Data Science

8 ECTS/LP

Version 1.0.0

Person responsible for module: Prof. Dr. Stefan Großkinsky

Contents:

1. Preliminaries on random variables
2. Concentration of sums of independent random variables
3. Random vectors in high dimensions
4. Random matrices
5. Concentration without independence
6. Quadratic forms, symmetrization and contraction
7. Random processes

Learning Outcomes / Competences:

Erlernen der wahrscheinlichkeitstheorietischen Grundlagen des Data Science. Studierende können Fragestellungen in Data Science mathematisch-präzise formulieren und rigorose Lösungen erarbeiten.

Workload:

Total: 240 h

Conditions: Probability Theory (e.g. Stochastik I), Analysis I+II. Linear Algebra I+II		**Credit Requirements:** Bestehen der Modulprüfung

Module MTH-3668: Selected Topics in Numerics *Ausgewählte Themen der Numerik*		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Daniel Peterseim Stykel, Tatjana, Prof. Dr.		
Contents: Die konkrete Themenauswahl wird regelmäßig aktualisiert und orientiert sich an aktuellen Fragestellungen und Trends in Forschung und Anwendung.		
Learning Outcomes / Competences: Deeper understanding of the finite element method in its most important versions; connections between methods as well as their advantages and disadvantages, with respect to application to concrete problems in particular; understanding of the problems arising from multiple scales as well as basic solution ideas; complex algorithms; integrated acquisition of key qualifications: In small groups, students learn to define problems precisely, to develop numerical solution strategies and to assess their suitability, while developing social skills for working together in a team.		
Workload: Total: 270 h 4 h lecture (attendance) 2 h exercise course (attendance)		
Conditions: Empfohlen: Einführung in die Numerik, Numerik gewöhnlicher DIfferentialgleichungen, Numerik partieller Differentialgleichungen		
Frequency: irregular	**Recommended Semester:** 2. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6,00	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Ausgewählte Themen der Numerik

Language: English / German
Contact Hours: 6,00
ECTS Credits: 9.0

Learning Outcome:

Die Studierenden entwickeln ein vertieftes Verständnis für moderne Verfahren der numerischen Mathematik und ihrer theoretischen Grundlagen. Sie lernen, komplexe numerische Algorithmen selbstständig zu entwerfen, zu analysieren und hinsichtlich Stabilität, Konvergenz, Effizienz und Robustheit zu bewerten. Zudem erlangen sie die Kompetenz, anspruchsvolle numerische Methoden zur Lösung wissenschaftlicher und praxisrelevanter Probleme zu konzipieren und in geeigneten Programmiersprachen umzusetzen. Schließlich lernen sie, numerische Ergebnisse kritisch zu beurteilen, Fehlerquellen zu identifizieren und angemessene Methoden für spezifische Anwendungen oder Forschungsfragen auszuwählen.

Module INF-0042: Project Module Software Methodologies for Distributed Systems *Projektmodul Softwaremethodiken für verteilte Systeme*	10 ECTS/LP

Version 1.0.0 (since SoSe13)
Person responsible for module: Prof. Dr. Bernhard Bauer

Contents:
Current research topics at the Software Methodology for Distributed Systems Lab

Learning Outcomes / Competences:
After participating in the project module, students understand problems of higher complexity in the field of software methodologies for distributed systems and have in-depth specialist knowledge and skills there. They are able to develop concepts, methods, procedures, techniques, and technologies of the mentioned field in research projects and are able to apply innovative approaches in solving problems. This enables them to link up with international research and make their scientific contribution to the field. In addition, students have the teamwork and communication skills, the ability to research literature and the scientific methodology to discuss problems in the area, define intermediate goals, and critically evaluate, classify, combine and present intermediate results and innovative ideas.

Key qualifications: Ability to think logically, analytically, and conceptually; Independent work with literature; Understandable, confident, and convincing presentation of ideas, concepts, and results; Quality awareness; Communication skills; Skill of working in teams and understanding team processes; Principles of good scientific practice; Project management skills; Scientific methodology;

Workload:
Total: 300 h
15 h seminar (attendance)
285 h internship / practical course (self-study)

Module INF-0080: Project Module Databases and Information Systems

Projektmodul Datenbanken und Informationssysteme

10 ECTS/LP

Version 1.6.0 (since SoSe14)
Person responsible for module: Prof. Dr. Peter Michael Fischer

Learning Outcomes / Competences:
After participating in the project module, students understand problems of higher complexity levels in the field of databases and information systems and have deeper professional knowledge and skills there. They are able to develop concepts, methods, procedures, techniques and technologies of the mentioned field in research projects and are able to apply innovative methods in solving problems. This enables them to connect to international research and make their own scientific contribution to the field. In addition, students have the teamwork and communication skills, the ability to research literature and the scientific methodology to discuss problems in the field, define intermediate goals, and critically evaluate, classify, combine and present intermediate results and innovative ideas.
Key Skills: Skill in logical, analytical, and conceptual thinking; Independent work with English-language literature; Intelligible, confident, and persuasive presentation of ideas, concepts, and results; Quality awareness; Communication skills; Skill in working in teams and understanding team processes; Principles of good scientific practice; Project management skills; Scientific methodology.

Remarks:

Module INF-0374: Project Module Resource Aware Algorithmics

Projektmodul Resource Aware Algorithmics

10 ECTS/LP

Version 1.0.0 (since WS20/21)
Person responsible for module: Prof. Dr. Tobias Mömke

Learning Outcomes / Competences:
After attending this research module, the students are able to understand algorithmic problems and solutions of medium difficulty in the area of resource aware algorithmics.They have acquired a detailed understanding of up-to-date topics within the area and can actively participate in research projects. Furthermore, they understand some deep concepts, methods, tools and technologies and can apply the acquired knowledge in research projects. Besides the technical abilities, they train their team and communication skills, the ability to perform literature research and to discurss and present technical topics.

Key Qualifications: Ability to perform analytical and logic thinking; self-sufficient work with scientific literature in English language; ability to present results and ideas in form of understandable and inspiring presentations; aim for high-quality results; communication skills; ability to work with a team and to understand team processes; respect for clean scientific practices

Workload:
Total: 300 h
285 h internship / practical course (self-study)
15 h seminar (attendance)

Conditions: none		**Credit Requirements:** Bestehen der Modulprüfung

Module INF-0436: Project Module Quantum Algorithms
Projektmodul Quantenalgorithmen

10 ECTS/LP

Version 1.0.0 (since SoSe23)
Person responsible for module: Prof. Dr. Jakob Siegfried Kottmann

Learning Outcomes / Competences:
After participating in the project module, students will understand highly complex problems in the field of quantum algorithms and will have in-depth specialist knowledge and skills in this area. They will be able to develop concepts, methods, procedures, techniques, and technologies in this field in research projects and will be able to apply innovative methods to solve problems. This enables them to connect with international research and make their own scientific contribution in this field. In addition, students will have the teamwork and communication skills, the ability to conduct literature research, and the scientific methodology to discuss problems in the field, define intermediate goals, and critically evaluate, classify, combine, and present interim results and innovative ideas.

Workload:
Total: 300 h
15 h seminar (attendance)
285 h internship / practical course (self-study)

Module INF-0227: Seminar Database Systems (Master) *Seminar Datenbanksysteme für Master*	4 ECTS/LP
Version 1.0.0 (since SoSe16) Person responsible for module: Prof. Dr. Peter Michael Fischer	

Learning Outcomes / Competences:
After attending the seminar, students are able to independently develop, analyze and evaluate advanced problems, concepts, methods, procedures, techniques and technologies in the field of database systems in relation to the individual seminar topic from the mentioned field.
They have the scientific methodology, communication skills and ability to use appropriate media to present a specific topic in a clear and understandable manner, both verbally and in writing, and to critically and argumentatively discuss and evaluate scientifically challenging topics from the named field. They will also be able to recognize the logical structures of reasoning and argumentation and use them in a goal-oriented manner.
The participants can formulate clearly and comprehensibly and present specialist content freely. They understand how to structure a lecture in a clear and comprehensible way and how to focus the lecture on essential messages and convey them in a comprehensible way, even in the case of complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions.
The students understand how to present themselves and how to deal confidently with common presentation media and to use them interactively. They manage to gear a lecture to a specific target group and to motivate the listener even during longer lecture durations and to apply various moderation techniques.
Key qualifications: Literature research; Independent work with English-language specialist literature; Analytical-methodical competence; Scientific methodology; Principles of good scientific practice; Skill in the comprehensible, confident and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts and results and for their documentation; Skill in logical, abstract, analytical and conceptual thinking and formal argumentation; Quality awareness, meticulousness; Communication skills; Time management; Evaluation of approaches, procedures, techniques and technologies from different points of view.

Remarks:
language (D/E) as requested by the students

Workload:
Total: 120 h
90 h preparation of written term papers (self-study)
30 h seminar (attendance)

Conditions:
Module Database Systems (INF-0073) - recommended

Module INF-0344: Seminar Software Engineering of Distributed Systems (Master)

Seminar Software Engineering verteilter Systeme (MA)

4 ECTS/LP

Version 1.0.0 (since SoSe20)
Person responsible for module: Prof. Dr. Bernhard Bauer

Learning Outcomes / Competences:
After attending the seminar, students can independently develop, analyze and evaluate advanced problems, concepts, methods, procedures, techniques, and technologies in software engineering for distributed systems about the particular seminar topic from the named field. They have the scientific methodology, communication skills, and ability to use appropriate media to present a specific case clearly and comprehensibly in speech and writing and to discuss and evaluate scientifically challenging topics from the named field critically and argumentatively. Furthermore, they can recognize the logical structures of thinking and argumentation and use them goal-oriented. The participants can formulate clearly and comprehensibly and present subject content freely. They understand how to structure a lecture clearly and understandably, focus the study on essential messages, and understandably convey them, even with complex content. They skillfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to present themselves and confidently deal with joint presentation media and use them interactively. They manage to gear a lecture to a specific target group, motivate the listener even during longer lecture durations, and apply various moderation techniques.

Key qualifications: Literature research; independent work with English-language specialist literature; analytical-methodical competence; scientific methodology; principles of good scientific practice; skills in the understandable, confident, and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts, and results and in documenting them; skills in logical, abstract, analytical and conceptual thinking and formal argumentation; quality awareness, meticulousness; communication skills; time management; evaluation of approaches, procedures, techniques, and technologies from different points of view. Module INF-0385: Seminar Resource Aware Algorithmics (Master) *Seminar Resource Aware Algorithmics (Master)*	4 ECTS/LP

Version 1.0.0 (since SoSe21)
Person responsible for module: Prof. Dr. Tobias Mömke

Learning Outcomes / Competences:
After attending the seminar, the students are able to understand basic algorithmic concepts, methods, tools and techniques in a self-sufficient manner.

They have acquired communication skills, knowledge about work processes and the use of media to present a specific scientific topic both as a talk and in writte form.

The participants have learned to express techical contents in a sturctured, understandable and inspiring manner. They have learned to confidently stand in front of the audience, using state of the art presentation tools and media. They are able to tailor the talk to the respective audience.

Key Qualifications: Literature research; work with scientific literature in English language; analytic copetences; clean scientific practice; ability to present techincal content in confident, understandable and structured manner (both in written and spoken form); abstract, logical and analytical thinking; ability to argue formally; aim for high quality; communication skills; time management.

Workload:
Total: 120 h
30 h seminar (attendance)
90 h preparation of written term papers (self-study)

Conditions:	**Credit Requirements:**
Good knowledge of content taught in mathematical Bachelor classes such as "Mathematik für Informatiker 1" and "Diskrete Strukturen und Logik." Knowledge about algorithms and data structures (Informatik 3) is useful.	Passing of the module exam

Module INF-0439: Seminar Quantum Algorithms (Master) *Seminar Quantum Algorithms (Master)*	4 ECTS/LP

Version 1.0.0 (since SoSe23)
Person responsible for module: Prof. Dr. Jakob Siegfried Kottmann

Contents:
The seminar deepens the content covered in the lecture “Quantum Algorithms.” Attending the lecture at the same time is recommended. Specific topics are based on current research. Application examples and topics covered in the lecture are explored in greater depth, and new topics are introduced. The seminar is suitable as preparation for a thesis in the field of quantum algorithms.

Learning Outcomes / Competences:
After attending the seminar, students will be able to independently develop, analyze, and evaluate advanced problems, concepts, methods, procedures, techniques, and technologies in the field of quantum algorithms in relation to the individual seminar topic from the aforementioned field. They will have the scientific methodology, communication skills, and ability to use appropriate media to present a specific topic clearly and comprehensibly in both written and spoken form and to critically discuss and evaluate scientifically demanding topics from the specified field. In addition, they will be able to recognize the logical structures of thinking and argumentation and use them in a goal-oriented manner. Participants can formulate clearly and comprehensibly and present specialist content freely. They understand how to structure a presentation clearly and comprehensibly and, even with complex content, focus the presentation on key messages and convey these in an understandable way. They skillfully apply chains of argumentation and solution strategies in the event of disruptions.
Students know how to present themselves confidently and use common presentation media interactively. They are able to tailor a presentation to a specific target group, motivate the audience even during longer presentations, and apply various moderation techniques.

Module INF-0444: Seminar Generative Artificial Intelligence *Seminar Generative Künstliche Intelligenz*	4 ECTS/LP

Version 1.0.0 (since SoSe23)
Person responsible for module: Prof. Dr. Elisabeth André

Learning Outcomes / Competences:
After attending the seminar, students are able to independently work out, analyze and evaluate advanced problems, concepts, methods, procedures, techniques and technologies in the field of "Generative Artificial Intelligence" in relation to the individual seminar topic from the mentioned field. They have the scientific methodology, communication skills and ability to use appropriate media to present a specific topic clearly and comprehensibly, both verbally and in writing, and to discuss and evaluate scientifically challenging topics from the named field critically and argumentatively. They will also be able to recognize the logical structures of reasoning and argumentation and use them in a goal-oriented manner. The participants can formulate clearly and comprehensibly and present specialist content freely. They understand how to structure a lecture in a clear and comprehensible way and how to focus the lecture on essential messages and convey them in a comprehensible way, even in the case of complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to present themselves and how to deal confidently with common presentation media and to use them interactively. They manage to gear a lecture to a specific target group and to motivate the listener even during longer lecture durations and to apply various moderation techniques.

Key qualifications: Literature research; Independent work with English-language specialist literature; Analytical-methodical competence; Scientific methodology; Principles of good scientific practice; Skill in the comprehensible, confident and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts and results and for their documentation; Skill in logical, abstract, analytical and conceptual thinking and formal argumentation; Quality awareness, meticulousness; Communication skills; Time management.

Module INF-0468: Seminar Natural Language Understanding (Master) *Seminar Natural Language Understanding (Master)*	4 ECTS/LP

Version 1.0.0 (since WS23/24)
Person responsible for module: Prof. Dr. Annemarie Friedrich

Contents:
The seminar on natural language understanding delves into the fascinating realm of artificial intelligence and linguistics, exploring how machines can comprehend and process human language. Computational semantics is a subfield of natural language processing (NLP) and computational linguistics that focuses on the development of algorithms, models, and systems for understanding and representing the meaning of natural language text in a way that computers can process and manipulate. Exemplary topics discussed in this seminar include: representing word, sentence, or text meaning, semantic role labeling, semantic parsing, discourse and pragmatics.

The number of participants is limited.

Learning Outcomes / Competences:
After attending the seminar, students are able to independently develop, analyze and evaluate advanced problems, concepts, methods, procedures, techniques and technologies in the field of embedded systems in relation to the individual seminar topic from the named field.

They have the scientific methodology, communication skills and ability to use appropriate media to present a specific topic in a clear and comprehensible manner, both verbally and in writing, and to discuss and evaluate scientifically challenging topics from the aforementioned field in a critical and argumentative manner. They will also be able to recognize the logical structures of reasoning and argumentation and use them in a goal-oriented manner.

The participants can formulate clearly and comprehensibly and present specialist content freely. They understand how to structure a scientific presentation in a clear and comprehensible way and how to focus the presentation on essential messages and convey them in a comprehensible way, even in the case of complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to present themselves and how to deal confidently with common presentation media and to use them interactively. They manage to gear a presentation to a specific target group and to motivate the listener even during longer presentation durations and to apply various moderation techniques.

Key qualifications: Literature research; Independent work with English-language specialist literature; Analytical-methodical competence; Scientific methodology; Principles of good scientific practice; Skill in the comprehensible, confident and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts and results and for their documentation; Skill in logical, abstract, analytical and conceptual thinking and formal argumentation; Quality awareness, meticulousness; Communication skills; Time management; Evaluation of approaches, procedures, techniques and technologies from different points of view.

Remarks:
The course will be taught by Dr. Jakob Prange, who will join the department in October.

Workload:
Total: 120 h
30 h seminar (attendance)
90 h preparation of written term papers (self-study)

Module INF-0479: Seminar Current Topics in Embodied Artificial Intelligence and Computer Vision *Seminar Current Topics in Embodied Artificial Intelligence and Computer Vision*	4 ECTS/LP

Version 1.0.0 (since WS23/24)
Person responsible for module: Prof. Dr. Jörg-Dieter Stückler

Learning Outcomes / Competences:
After attending the seminar, the students are able to work out, analyze and evaluate further problems, concepts, methods, techniques and technologies in the field of embodied artificial intelligence and computer vision, methods, procedures, techniques and technologies in the field of Embodied Artificial Intelligence and Computer Vision independently, analyze and evaluate them in relation to the individual seminar topic from the mentioned field.
They possess the scientific methodology, communication skills and ability to use appropriate media to present a specific topic in a clear and comprehensible manner, both verbally and in writing, and critically and argumentatively discuss and evaluate scientifically challenging topics from the named field. In addition, they can recognize the logical structures of thought and argumentation and use them in a goal-oriented manner. Participants are able to formulate clearly and comprehensibly and present scientific content freely. They understand how to structure a presentation clearly and comprehensibly and, even with complex content, how to focus the presentation on essential messages and convey them in a comprehensible manner. The students understand how to present themselves and how to deal confidently with common presentation media and to use them interactively. They manage to gear a presentation to a specific target group, to motivate the listener and to apply various moderation techniques.

Key qualifications: Literature research; independent work with English-language scientific literature; Analytical-methodical competence; Scientific methodology; Principles of good scientific practice; Ability to present comprehensible, confident and convincing (written and oral); presentation of (practical or theoretical) ideas, concepts, and results and to document them; ability to logical, abstract, analytical and conceptual thinking and formal reasoning; quality consciousness, meticulousness; communication skills; time management; evaluation of approaches, procedures, techniques and technologies from different points of view.

Module INF-3057: Seminar on Machine Learning and Computer Vision Master

Seminar on Machine Learning and Computer Vision Master

4 ECTS/LP

Version 1.0.0 (since SoSe26)
Person responsible for module: Prof. Dr. Rainer Lienhart

Learning Outcomes / Competences:
Upon completion of the seminar, students will be able to independently acquire, analyze, and evaluate advanced problems, concepts, methods, procedures, techniques, and technologies in the field of Multimedia Computing and Computer Vision (e.g., image processing, video processing, machine vision/listening and learning, image/video retrieval) within the context of their individual seminar topic.

They possess scientific methodological competence, communication skills, and the ability to use modern media to present a specific topic clearly and comprehensibly, both orally and in writing. They are able to critically discuss, argue, and evaluate scientifically complex topics within the aforementioned field. Furthermore, they are able to recognize and effectively apply logical structures of reasoning and argumentation.

Participants can articulate themselves clearly and comprehensibly and present technical content freely. They know how to structure a presentation in a clear and logical manner and, even with complex content, focus the presentation on key messages and convey them understandably. They skillfully apply chains of argumentation and solution strategies to handle disruptions. Students demonstrate stage presence and handle common presentation media confidently and interactively. They are able to tailor a presentation to a specific target audience, keep listeners engaged even during longer presentations, and apply various moderation techniques.

Key Qualifications: Acquisition of presentation techniques; literature research; working with English technical literature; principles of good scientific practice; evaluation of solution approaches, procedures, techniques, and technologies from different perspectives.

Module INF-3059: Project Seminar Responsible Artificial Intelligence: Design, Evaluation and Challenges (Master) *Projektseminar zu Verantwortungswürdige Künstliche Intelligenz: Gestaltung, Bewertung und Herausforderungen (Master)*	4 ECTS/LP

Version 1.0.0 (since SoSe26)
Person responsible for module: Prof. Dr. Bernhard Bauer

Learning Outcomes / Competences:
After attending the seminar, the students can independently work out and analyse advanced problems, concepts, methods, procedures, techniques, and technologies from the field of digital ethics and evaluate them in relation to the individual seminar topic.

Participants possess scientific methodology, communication skills, and the ability to present a special topic clearly and comprehensibly in speech and writing and to discuss and evaluate scientifically challenging topics from the named field critically and argumentatively.

Furthermore, they learn to recognise logical structures of thinking and argumentation and use them in a goal-oriented manner. The participants can formulate clearly and comprehensibly and present subject content freely. They understand how to structure a talk that is clear and easy to follow. Additionally, the students know how to focus on essential messages and convey them in a comprehensible way, even with complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to confidently deal with common presentation media and use them interactively. They manage to gear a talk to a specific target group, apply various moderation techniques, and keep their audience engaged even over a longer period.

Key qualifications: Presentation techniques; literature research; principles of good scientific practice; evaluating solution approaches, procedures, techniques, and technologies from different points of view.

Remarks:
Sofern Ihre PO vorschreibt, dass Sie ein Seminar belegen müssen, kann dieses Modul **nicht** dafür verwendet werden, da das Projektseminar nicht als Seminar zählt!

Module KTH-9000: Ethics & Computer Science

Ethics & Computer Science

4 ECTS/LP

Version 1.0.0 (since WS25/26)
Person responsible for module: Prof. Dr. Kerstin Schlögl-Flierl

Learning Outcomes / Competences:
After completing the module, students will be able to identify, analyze, and evaluate ethical issues that arise in the development and application of computer science and artificial intelligence (AI). They gain knowledge of central ethical theories of AI, with special focus on the embedded ethics approach and both individual- and social-ethical perspectives.

A core outcome of the module is the development of fundamental ethical competence. Students learn to recognize ethically relevant aspects of technical work, to assess them critically, and to integrate ethical reflection into research and practice. They are able to apply ethical frameworks, evaluate alternative approaches, and propose well-reasoned solutions.

Key Learning Objectives:

- Fundamental ethical theories should be recognized.
- Independent ethical judgment should be encouraged.
- The field of AI ethics should be understood in overview.
- The specific problems of data ethics should be understood.

Key Qualifications: Fundamental ethical competence in the context of computer science; Literature research and independent engagement with English-language academic sources; Analytical-methodical competence; Ability to apply ethical concepts, theories, and methods; principles of good scientific practice; Logical, abstract, and conceptual thinking; Structured ethical argumentation; Communication skills; Oral and written presentation of ideas, arguments, and results in a clear and convincing manner.Basic ethical reflection skills should be developed. The ability to identify problems for the other modules should be developed.

Workload:
Total: 120 h
30 h (attendance)
30 h studying of course content using provided materials (self-study)
60 h studying of course content using literarture (self-study)

Conditions: none		**Credit Requirements:** Passing the module exam
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 2,00	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Ethics & Computer Science
Language: English
Frequency: each summer semester
Contact Hours: 2,00

Contents:

The ethical debate surrounding AI currently revolves around various principles and guidelines from policy papers. The topics of bias and explainability are particularly prominent in these ethical debates. However, the focus should also be broadened to include environmental and climate ethics issues. The issue of human rights violations in various fields is also a pressing one and can only be addressed repeatedly in relation to new applications. The principles of what exactly constitutes responsible use of these technologies need to be clarified.

Assigned Courses:

Ethics and Data Science (lecture)

**(in attendance) **

Examination

Ethics & Computer Science

oral exam / length of examination: 30 minutes, graded

Test Frequency:

when a course is offered

Module MTH-2021: Master Thesis with Colloquium *Master Thesis with Colloquium*		30 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Marc Nieper-Wißkirchen		
Learning Outcomes / Competences: Students are familiar with the current state of research in a specialised field and the relevant literature. They are able to apply modern mathematical methods to the in-depth study of a current research question. They have the competence to independently work on a mathematical problem within a given time frame using scientific methods and to present the scientific basis of the problem and their results in writing. Integrated acquisition of key qualifications: ability to work in a team, perseverance, ability to document one's own scientific results in writing, critical reflection on one's own results in an international scientific context, principles of good scientific practice.		
Workload: Total: 900 h		
Conditions: none		
Frequency: each semester	**Recommended Semester:** 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 0,00	**Repeat Exams Permitted:** once	

Parts of the Module

Part of the Module: Master Thesis with Colloquium

Mode of Instruction: colloquium
Language: German / English
Frequency: each semester
Contact Hours: 0,00
ECTS Credits: 30.0

Contents:

Appropriately chosen topic

Prerequisites: Basic knowledge in most mathematical subdisciplines, in-depth knowledge in a specialised field.

Examination

Master Thesis with Colloquium

Master's thesis / length of examination: 6 months, graded
