Module INF-3031: Algorithms & Data Engineering <i>Algorithms & Data Engineering</i>		8 ECTS/LP
Version 1.0.0 (since WS25/26) Person responsible for module: Prof. Dr. Fabian Panse Prof. Dr. Pascal Lenzner		
Learning Outcomes / Competences: After successfully completing this module, students will have mastered the basic principles and techniques for designing, implementing and evaluating systems for data preparation and integration. In addition, students have subject-specific knowledge to understand basic problems in the field of data engineering and to solve them by applying the skills they have learned. The module is divided into two parts. The first part deals with theoretical fundamentals. In addition to basic data structures and algorithmic solution paradigms (complexity classes, runtime analysis), this includes graph-theoretical algorithms, dynamic programming as well as search and hashing algorithms. The second part is dedicated to their use in various techniques from the areas of data preparation and data integration. This includes data cleaning, schema matching and data matching. Key qualifications: Independent work with textbooks; ability to abstract; analytical and structured problem-solving strategies; implementation of technical solution concepts in programs and models, ability to analyze and structure complex computer science problems; knowledge of the advantages/disadvantages of design alternatives and evaluation in the respective context; selection and correct application of suitable methods; knowledge of practice-relevant tasks; ability to solve problems under practice-oriented conditions;		
Workload: Total: 240 h 30 h studying of course content using provided materials (self-study) 30 h exercise course (attendance) 60 h lecture (attendance) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study)		
Conditions: none		Credit Requirements: Passing the Module Exam
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Algorithms & Data Engineering (Lecture) Mode of Instruction: lecture Language: English / German Frequency: each summer semester Contact Hours: 4,00		

Contents:

The lecture includes basic concepts from the field of algorithms and data structures and their application in concrete problems of data engineering.

Concrete contents are:

- basic data structures
- algorithmic solution paradigms (complexity classes, runtime analysis)
- graph-theoretical algorithms
- dynamic programming
- search and hashing algorithms
- data preparation
- data cleaning
- schema matching
- data matching

Assigned Courses:

Algorithms & Data Engineering (lecture)

**(in attendance) **

Part of the Module: Algorithms & Data Engineering (Exercise)

Mode of Instruction: exercise course

Language: English / German

Frequency: each summer semester

Contact Hours: 2,00

Assigned Courses:

Exercise for Algorithms & Data Engineering (exercise course)

when a course is offered

Module INF-3033: Machine Learning <i>Machine Learning</i>		8 ECTS/LP
Version 1.0.0 (since SoSe25) Person responsible for module: Prof. Dr. Jörg-Dieter Stückler		
Learning Outcomes / Competences: Students will understand the following methodological foundations of probabilistic machine learning at an in-depth scientific level and will be able to implement appropriate algorithms for advanced problems: Univariate and multivariate distributions, probabilistic graphical models, maximum likelihood and a-posteriori estimation, Bayesian inference and learning, information theory, expectation maximization, linear and logistic regression, probabilistic deep neural networks, Gaussian processes, probabilistic dimensionality reduction, deep generative models, and probabilistic state-space models. Participants understand the advantages and disadvantages of different methods and can analyze and select them for applications and apply them to new problems. Students have developed skills for analyzing and structuring probabilistic machine learning problems and know concepts and approaches for implementing algorithms for these problems. In addition, they have the competence to recognize significant scientific and technical developments. Key qualifications: Ability to think logically, analytically and conceptually; selection and confident application of appropriate methods; independent work with textbooks; implementation of technical solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives, evaluation in the respective application context; ability to make scientifically meaningful assessments using appropriate methods. Comprehensible presentation of results; ability to work in teams.		
Workload: Total: 240 h 60 h lecture (attendance) 30 h exercise course (attendance) 30 h studying of course content using provided materials (self-study) 30 h studying of course content using literature (self-study) 90 h studying of course content through exercises / case studies (self-study)		
Conditions: • Basic programming knowledge in Python • Basic knowledge of probability theory • Recommended: Basic knowledge in deep learning		Credit Requirements: Passing the Module Exam
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Machine Learning (Lecture) Language: English Frequency: each summer semester Contact Hours: 4,00		

Contents:

This lecture teaches basic methods and algorithms for probabilistic machine learning. The lecture includes the following topics:

1. Univariate and multivariate distributions
2. Probabilistic graphical models
3. Maximum likelihood and a-posteriori estimation
4. Bayesian statistics and posterior predictive distribution
5. Bias-Variance tradeoff
6. Information theory
7. Linear and logistic regression
8. Variational inference
9. Expectation maximization and Gaussian mixture models
10. Probabilistic deep neural networks (deep ensembles, variational Bayesian neural networks, Laplace approximation)
11. Probabilistic dimensionality reduction (principal component analysis, variational autoencoders)
12. Deep generative models (probabilistic diffusion models)
13. Gaussian and Neural processes
14. Probabilistic state-space models

Literature:

Lecture slides will be provided. Additional references to literature will be provided in lecture and exercises.

Module MTH-4270: Mathematical Methods in Data Science A <i>Mathematical Methods in Data Science A</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. André Uschmajew		
Contents: - Basic mathematical concepts in data science and machine learning (least squares problems, regression, dimensionality reduction, singular value decomposition, convex and nonconvex optimization, gradient descent) - Foundations of statistical learning theory - Kernel methods and support vector machines - Reproducing kernel Hilbert spaces		
Learning Outcomes / Competences: Students gain an overview of fundamental mathematical concepts in machine learning and data science. Furthermore, they acquire skills in advanced topics such as the basics of statistical learning theory or reproducing kernel Hilbert spaces. These concepts are applied to current learning models in order to analyze them.		
Workload: Total: 240 h 2 h exercise course (attendance) 4 h lecture (attendance)		
Conditions: none		Credit Requirements: Bestehen der Modulprüfung
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Advanced Mathematical Methods of Data Science A Language: English Frequency: each winter semester Contact Hours: 4,00		
Literature: M. Mohri, A. Rostamizadeh, A. Talwalkar: Foundations of Machine Learning, MIT Press, 2018 F. Bach: Learning Theory from First Principles, MIT Press, 2024 I. Steinwart , A. Christmann: Support Vector Machines, Springer, 2008		
Assigned Courses: Mathematical Methods in Data Science A (lecture) <i>*(in attendance) *</i>		
Examination Advanced Mathematical Methods of Data Science A written exam, graded Test Frequency: only in the winter semester		

Module MTH-4280: Mathematical Methods in Data Science B <i>Mathematical Methods in Data Science B</i>		8 ECTS/LP
Version 1.0.0 (since WS25/26) Person responsible for module: Prof. Dr. André Uschmajew		
Contents: Possible topics include: - Statistical learning theory - Neural network models - Approximation theorems and deep learning - Reinforcement learning		
Learning Outcomes / Competences: Students gain an overview of fundamental mathematical concepts in machine learning and data science. Furthermore, they acquire skills in advanced topics such as statistical learning theory, approximation theorems, or reinforcement learning. These concepts are applied to current learning models in order to analyze them.

Module INF-0066: Organic Computing II <i>Organic Computing II</i>		5 ECTS/LP
Version 1.3.0 (since SoSe14) Person responsible for module: Prof. Dr. Jörg Hähner		
Learning Outcomes / Competences: Participants will be able to reproduce the essential concepts and methods of the research field of Organic Computing (OC). These include: Self-Organisation, Self-Adaptation, Robustness, Flexibility, Observer/Controller architectures (O/C), Self-X properties, Learning Classifier Systems (most notably, XCS), Genetic Algorithms (GA), Particle Swarm Optimisation, Influence Detection and Trust. They will also be able to justify the consideration of OC systems-based solutions and give examples for practical scenarios in which OC techniques should be applied. The students will be able to develop larger software systems using the O/C architecture as well as select suitable OC techniques for the architecture's components. They will be able to learn by themselves further OC techniques if solving a given problem requires it. Further, students will be able to solve practical problems using XCS, swarming and a GA. They will also be able to develop and evaluate OC system architectures and perform scientific evaluations related to OC systems. Key qualifications: Ability to present and document results in a comprehensible way, ability to present ideas and concepts confidently and convincingly, knowledge of the way of thinking as well as the language of application-relevant disciplines, skill of working in teams.		
Workload: Total: 150 h 15 h studying of course content using literature (self-study) 15 h studying of course content using provided materials (self-study) 60 h studying of course content through exercises / case studies (self-study) 30 h lecture (attendance) 30 h exercise course (attendance)		
Conditions: none		Credit Requirements: Bestehen der Modulprüfung
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Organic Computing II (Vorlesung) Mode of Instruction: lecture Language: German Frequency: each summer semester Contact Hours: 2,00
Contents: The lecture "Organic Computing" teaches approaches to the organisation of complex networked systems that consist of a large number of autonomous subsystems. To this end, the requirements and goals of such systems are first defined and discussed. In addition, concepts from the field of system architectures and approaches from the field of nature-inspired algorithms are presented and evaluated. References to concrete application areas are given in all parts. The associated practice deepens the understanding of the approaches learned by applying them in an exemplary manner.

oral exam / length of examination: 30 minutes, graded

Test Frequency:

when a course is offered

Description:

The exam can be taken every semester at the beginning and end of the lecture-free period.

Module INF-0217: Practical Module Autonomous Driving <i>Praktikum Autonomes Fahren</i>		10 ECTS/LP
Version 2.0.0 (since WS21/22) Person responsible for module: Prof. Dr. Bernhard Bauer Prof. Dr. Lars Mikelsons		
Learning Outcomes / Competences: After participating in the practical course on autonomous driving, students will be able to solve practical problems of high complexity in conceptual design, development, and safeguarding of highly automated/autonomous vehicles using current methods and tools of model-based development. The students acquire in-depth subject-specific and interdisciplinary knowledge and skills, for example, from hardware-related computer science, software engineering, and the underlying driving physics and mathematics. They are able to develop concepts, methods, procedures, techniques, and technologies of the mentioned field in research projects and are able to apply innovative approaches in solving problems. This enables them to link up with international research and make their scientific contribution to the field. In addition, students have the teamwork and communication skills, the ability to research literature and the scientific methodology to discuss problems in the area, define intermediate goals, and critically evaluate, classify, combine, present and document intermediate results and innovative ideas understandably. Key qualification: Ability to think logically, analytically, and conceptually; Independent work with English-language specialist literature; Understandable, confident, and convincing presentation of ideas, concepts, and results; Quality awareness; Communication skills; Ability to work in teams and understand team processes; Project management skills.		
Remarks: The practical course is offered alternately by the two chairs mentioned above.		
Workload: Total: 300 h 150 h internship / practical course (attendance) 150 h studying of course content through exercises / case studies (self-study)		
Conditions: Participation in one of the two seminars is recommended.		Credit Requirements: Passing the module exam
Frequency: irregular	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 10,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module Part of the Module: Praktikum Autonomes Fahren Mode of Instruction: internship Language: German / English Frequency: irregular Contact Hours: 10,00		

Contents:

In this practical course, the participants learn how various selected partial aspects of autonomous driving can be implemented, simulated, and analyzed.

In addition, the participants will get to know, among other things, development tools frequently used in the automotive environment.

After an introductory course, the participants will implement autonomous driving functions in small groups with the help of the tools mentioned.

The developed results are finally demonstrated and evaluated.

Assigned Courses:

Praktikum Autonomes Fahren (internship)

Module INF-0243: Process Mining <i>Process Mining</i>		6 ECTS/LP
Version 1.2.0 (since SoSe17) Person responsible for module: Prof. Dr. Robert Lorenz		
Learning Outcomes / Competences: Participants understand the following essential concepts of computer science at an advanced scientific level, including their mathematical and formal foundations: event log, partial order, Petri net, concurrency, sequential and causal semantics of a concurrent system, synthesis of a concurrent system, business process, process mining, process discovery, conformance checking. They can model concurrent systems of medium complexity in a suitable modeling language, as well as generate, evaluate, and convert different models for analysis and simulation for a given concurrent system. They are familiar with the various process mining use cases with appropriate solution techniques and quality criteria for their evaluation. Participants will have advanced mathematical formal methodology for the analysis and formalization of complex process discovery problems. They will be able to confidently select suitable algorithms for their solution with regard to qualitative and quantitative criteria, apply them, and interpret and evaluate the results. Key qualifications: Ability to think logically, analytically, conceptually, and algorithmically; Independent work with textbooks and English-language specialist literature; Clear presentation of results; Quality awareness; Meticulousness; Principles of good scientific practice; Scientific methodology;		
Workload: Total: 180 h 45 h lecture (attendance) 15 h exercise course (attendance) 23 h studying of course content using literature (self-study) 75 h studying of course content through exercises / case studies (self-study) 22 h studying of course content using provided materials (self-study)		
Conditions: none		Credit Requirements: Passing the module examination
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Process Mining (Vorlesung) Mode of Instruction: lecture Language: German / English Frequency: each summer semester Contact Hours: 3,00
Contents: The lecture provides a comprehensive overview of the field of process mining research: - Modeling techniques: Petri nets, workflow nets, process trees, direct follows graphs - Discovering algorithms: Alpha-Algorithm, Inductive Miner, Direct Follows Miner, Synthesis based discovery techniques - Conformance checking: fitness, precision, generalization, simplicity - Tools: PROM, Celonis

Module INF-0277: Analysing Massive Data Sets <i>Analyzing Massive Data Sets</i>		8 ECTS/LP
Version 1.2.0 (since SoSe18) Person responsible for module: Prof. Dr. Peter Michael Fischer		
Learning Outcomes / Competences: After attending the course, students will be able to understand and evaluate the concepts and methods, procedures, techniques, and technologies for analyzing massively large data sets. Possible content includes: • Fundamentals of information retrieval • Similarity search and clustering • Analysis of data streams and temporal data • Web graphs: Link analysis and social networks • Dynamic networks and information diffusion • Recommender systems and online advertising • Computational methods for massive data sets Students will also be able to implement technical solution concepts for analyzing large data sets in programs. Key Skills: Ability to think logically, analytically and conceptually, weigh up approaches to solutions, acquire abstraction skills; subject-specific in-depth knowledge; implement subject-specific solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives and evaluation in the respective application context; selection and confident application of suitable methods; ability to make scientifically meaningful evaluations using suitable methods; ability to solve problems under practical boundary conditions; competence in recognizing significant technical developments;		
Workload: Total: 240 h 30 h studying of course content using literature (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using provided materials (self-study) 60 h lecture (attendance) 30 h exercise course (attendance)

Module INF-0293: Advanced Deep Learning <i>Advanced Deep Learning</i>		8 ECTS/LP
Version 1.0.0 (since WS18/19) Person responsible for module: Prof. Dr. Rainer Lienhart		
Learning Outcomes / Competences: After participating in the practical module, students have detailed and up-to-date knowledge in the field of machine learning, can identify significant technical developments and can implement a complete pipeline for multimodal data processing with deep neural networks. They can precisely describe and discuss problems and results in the field and apply learned concepts and methods to similar problems in machine learning. In addition, the students analyse advanced concepts, methods, procedures, techniques and technologies from the field of machine learning to apply them in research projects, transfer them to current industry-related tasks and actively participate in them. The students learn to transfer scientifically challenging topics in the field of machine learning to other research questions and, building on this, to work out a complex project in group work. They also have the teamwork and communication skills to discuss problems in the field, to discuss, describe and present questions and interim results. In addition, students can conduct detailed experiments and assess, compare and check results for plausibility.		
Key qualifications: Advanced mathematical-formal methodology; Translating subject-specific solution concepts into programs and models; Methods for developing larger software systems, construction of abstractions and architectures; Interdisciplinary knowledge; Systematic further development of design methods; Skill of confident and convincing presentation of ideas and concepts; Understanding of team processes; Skill of working in teams; Ability to lead teams; Familiarity with procedures and processes in the application environment of computer science; Skill of solving problems under practical boundary conditions; Self-reflection; Responsible action against the background of inadequacy and conflicting interests; Ability to expand existing knowledge independently; Quality awareness, meticulousness		
Workload: Total: 240 h 30 h studying of course content using provided materials (self-study) 30 h studying of course content using literature (self-study) 120 h studying of course content through exercises / case studies (self-study) 20 h lecture (attendance) 40 h exercise course (attendance)		
Conditions: Fundamental knowledge in computer vision (basic studies lectures "Multimedia Grundlagen 1", "Grundlagen der Signalverarbeitung und des Maschinellen Lernens", "Multimedia Grundlagen 2" as well as master's lectures "Multimedia 2" and "Machine Learning and Computer Vision")		Credit Requirements: Passing the portfolio examination
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program

Module INF-0308: Software-Intensive Systems <i>Software-intensive Systeme</i>		6 ECTS/LP
Version 1.2.0 (since SoSe19) Person responsible for module: Prof. Dr. Bernhard Bauer		
Learning Outcomes / Competences: Students can create (K3), evaluate (K6), and document software architectures. For this purpose, they can transfer technical solution concepts into models and know methods for developing such abstractions and architectures. They can describe the advantages and disadvantages of design alternatives (K4) and evaluate them in the respective application context (K6). Problems can be identified independently (K4), and solutions can be designed systematically (K5) and realized (K3). Furthermore, they have developed skills for the analysis and structuring of problems in enterprise architectures and know the concepts and procedures for creating such architectures. The students can name practice-relevant issues in enterprise architectures (K1). They can select and confidently apply suitable methods for architecture creation and evaluation. The students know modeling languages and patterns to create software and enterprise architectures. They have the competence to recognize significant technical developments. Key qualification: Competence to network different subject areas; ability to work in a team and communicate; ability to expand existing knowledge independently; quality awareness; skill to present and document results in an understandable way; practical experience and professional qualification.		
Workload: Total: 180 h 22 h studying of course content using provided materials (self-study) 23 h studying of course content using literature (self-study) 45 h lecture (attendance) 60 h studying of course content through exercises / case studies (self-study) 30 h exercise course (attendance)		
Conditions: The previous course "Software Architectures and Enterprise Architecture Management" and the course "Software-intensive Systems and Medical Devices" must not have been taken due to overlaps.		
Frequency: irregular (usu. summer semester)	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Module INF-0309: Real-Time Systems <i>Echtzeitsysteme</i>		8 ECTS/LP
Version 1.11.0 (since WS19/20) Person responsible for module: Prof. Dr. Sebastian Altmeyer		
Learning Outcomes / Competences: The lecture imparts basic and advanced knowledge of real-time systems as they occur in almost all embedded systems, but especially in the areas of automotive, aerospace and robotics. The theoretical foundations will be based on the current state of research and will enable students to further engage with the topic of embedded real-time systems at a scientific level. The lecture will provide students with the ability to distinguish and classify different embedded systems based on their real-time requirements. Students will learn to apply, compare, and critically analyze current methods for validation of timing behavior with respect to possible certification of timing behavior. This includes the optimization and selection of real-time schedules and their verification. The lecture will also cover different processor types, and will go into more detail about the specifics of single-core and multi-core processors in the real-time domain. Students will be able to classify processors based on their suitability for real-time systems and to investigate the impact of design decisions on real-time behavior and real-time behavior analysis. The course material will be exemplified by case studies from the automotive and aerospace fields and applied by the students using a simple real-time system. Key qualifications: Analytical-methodical competence, consideration of approaches to solutions, presentation of solutions to exercise problems; skill in presenting and documenting results in a comprehensible manner; ability to expand existing knowledge independently; quality awareness, meticulousness; self-reflection; responsible action against a background of inadequacy and conflicting interests.		
Workload: Total: 240 h 30 h studying of course content using literature (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using provided materials (self-study) 60 h lecture (attendance) 30 h exercise course (attendance)		
Conditions: none

Module INF-0316: Machine Learning and Computer Vision <i>Machine Learning and Computer Vision</i>		8 ECTS/LP
Version 1.0.0 (since SoSe19) Person responsible for module: Prof. Dr. Rainer Lienhart		
Learning Outcomes / Competences: After successful participation in this module, students possess advanced knowledge of machine learning (decision trees, neural networks and deep neural networks, hypothesis evaluation, instance-based learning, Bayesian learning, learning theory), data reduction (e.g. principal component analysis), advanced image processing and machine vision and are able to apply them. They can analyse, understand and programmatically implement scientifically complex procedures in the field of multimedia data processing, as well as to appropriately apply the principles learned to new problems. They develop skills in logical, analytical and conceptual thinking in the field of digital signal processing and multimedia data processing.		
Key qualifications: advanced mathematical-formal logic; implementation of subject-specific solution concepts; interdisciplinary knowledge; development and implementation of solution strategies for complex problems; systematic further development of design methods; ability to solve problems under practical boundary conditions.		
Workload: Total: 240 h 30 h exercise course (attendance) 60 h lecture (attendance) 30 h studying of course content using provided materials (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study)		
Conditions: none		Credit Requirements: Passing the Module Exam
Frequency: each summer semester (except for summer term 2026)	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Module INF-0368: Embedded Hardware <i>Embedded Hardware</i>		5 ECTS/LP
Version 1.2.0 (since WS20/21) Person responsible for module: Prof. Dr. Sebastian Altmeyer		
Learning Outcomes / Competences: The lecture provides basic and advanced knowledge of hardware components (e.g. GPIO, hardware timer, ...) as they are found in almost all embedded systems. Furthermore, the functional principles of different sensors and actuators are presented. A special focus will be on their use to interact with the physical world and on particularities of their application. The theoretical foundations will be based on the current state of research and will allow students to further engage with the topic of embedded hardware at a scientific level. The lecture will provide students with the ability to distinguish and classify different embedded systems based on their hardware requirements. Students will learn to apply current component programming methods, compare them, and critically analyze them for efficient use. This includes selecting and evaluating hardware components relevant to the system, as well as developing a configuration of components optimized for an existing problem. The lecture will also cover various sensors and actuators, and will go into more detail about the conversion between an analog, physical quantity and a digital, electrical quantity. Here, students will be able to classify physical quantities based on their properties and make a decision about the sensors, actuators, and hardware components needed for the conversion. The subject matter is exemplified by means of case studies, e.g. from the automotive field, and applied by the students using a simple embedded system. Key qualifications: Analytical-methodical competence, consideration of approaches to solutions, presentation of solutions to exercise problems; skill in presenting and documenting results in a comprehensible manner; ability to expand existing knowledge independently; quality awareness, meticulousness; self-reflection; responsible action against the background of inadequacy and conflicting interests.

Module INF-0432: Isabelle-Lab <i>Isabelle-Lab</i>		8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. Kirstin Peters		
Contents: The general idea of interactive theorem proving is introduced and the tool Isabelle/HOL is discussed. Several common features of Isabelle/HOL are studied: e.g. basic concepts such as data structures and functions, modelling mechanisms such as locales, proof techniques such as structural induction, and the proof language Isar.		
Learning Outcomes / Competences: Knowledge: Students will get to know the key concepts, definitions, and techniques of interactive theorem proving with Isabelle/HOL. They will get insights and practical knowledge about the design of models in Isabelle/HOL such as the conception of data structures and functions or the abstraction of concepts into a locale. They will learn strategies to tackle complex and technically very detailed proofs. They will learn about automated reasoning mechanisms as well as interactive proof tactics; their respective advantages and typical areas of application. Finally, students learn about the guarantees provided by machine checked proofs and the additional complexity that comes with such projects. Skills: Students will be familiar with the basic concepts of modelling and proving in Isabelle/HOL. Students will be able to formally and correctly model applications and concepts in Isabelle/HOL. They are able to select appropriate proof methods and carry out complex proofs with the assistance of Isabelle/HOL. They understand the hints provided by the proof assistance, can analyse the current state of a proof and its proof obligations, and can carry out the next relevant steps. They understand under which circumstances the automatic proof methods are useful and how to apply them. Moreover, they are able to plan and carry out a project and meet the time restrictions that come with such a project. Finally, they will practice logical and conceptual thinking as well as the abstraction and formalisation of concepts in a stringent mathematical framework. Competences: Students are prepared to work on verification projects. Students are able to plan and carry out the modelling as well as the proof obligations of such a project in an interactive theorem prover. They understand the nature of the correctness guarantees provided by machine checked proofs, but also the additional complexity that is necessary to carry out such proofs. Furthermore, they know how to characterise and judge on the quality and suitability of existing models and theories in Isabelle/HOL. More abstractly, they are able to reason more concretely about the correctness of a formalisation and proofs. Key skills: Formal methods; Knowledge of advantages and disadvantages of different design alternatives in modelling; Ability to carry out very detailed proofs; Ability to work on and organise projects; Ability to work autonomously; Quality awareness; Scientific working.		
Workload: Total: 240 h 30 h studying of course content using provided materials (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study) 60 h exercise course (attendance) 30 h lecture (attendance)

Module INF-0440: Quantum Algorithms <i>Quantum Algorithms</i>		5 ECTS/LP
Version 1.0.0 (since SoSe23) Person responsible for module: Prof. Dr. Jakob Siegfried Kottmann		
Contents: Foundations of Quantum Information Processing: • qubits and their representation • BraKet notation and necessary structures from linear algebra • operations on qubits: circuits and gates Quantum Algorithms • quantum search and amplitude amplification • quantum fourier transform and it's applications • quantum simulation • variational quantum algorithms • differentiable quantum algorithmic procedures • quantum heuristics • usecases from current day research		
Learning Outcomes / Competences: Students acquire basic knowledge of quantum algorithms and are able to explain fundamental principles and describe their use in algorithmic structures. They can describe established algorithmic structures from the field of quantum algorithms, such as search, Fourier transform, and phase estimation, and determine and compare potential areas of application. After attending the course, they will be able to construct quantum algorithmic approaches and translate them into discrete operations on qubit systems. Students will have a sound basic knowledge of fundamental quantum algorithmic structures and variational heuristics. They will be able to identify, analyze, and evaluate quantum algorithmic elements in current literature.		
Workload: Total: 150 h 60 h studying of course content through exercises / case studies (self-study) 15 h studying of course content using literarture (self-study) 15 h studying of course content using provided materials (self-study) 30 h exercise course (attendance) 30 h lecture (attendance)

Module INF-0466: Biophotonics <i>Biophotonics</i>		5 ECTS/LP
Version 1.3.0 (since WS23/24) Person responsible for module: Prof. Dr. Sebastian Zaunseder		
Learning Outcomes / Competences: Subject-related competences: After successful participation, students have knowledge and competences with regard to biophotonic methods for diagnostic applications. Students have basic knowledge from the field of photonics and know basic principles of light-tissue interaction. They are familiar with the functional principles of selected biophotonic methods for diagnostics, are able to work with them or with data from them and to interpret results. Student can also contribute to the (further) development of corresponding methods. Methodological competencies: Students are able to deal independently with the functionality and possible applications of biophotonic processes, to prepare biophotonic measurement data using common script languages such as Matlab or Python, and to document and interpret the application of methods for data preparation appropriately. Students also have basic competencies in the area of modeling/simulation of biophotonic processes. Interdisciplinary Competencies: The students are able to apply the acquired knowledge in any area of study that deals with diagnostically relevant data. In addition, the module teaches essential problem-solving skills, whereby an abstract way of thinking as well as a structured approach to problem solving are learned. Key skills: Ability to think logically, analytically and conceptually; ability to present and document results in a comprehensible manner; ability to communicate orally and in writing in a way that is appropriate to the situation and specific to the target group; ability to work together in teams; ability to solve problems under practical boundary conditions; ability to expand existing knowledge independently; quality awareness.		
Workload: Total: 150 h 30 h exercise course (attendance) 30 h lecture (attendance) 60 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using provided materials (self-study)		
Conditions: basic math skills; basic programming skills		Credit Requirements: Passing the module exam

Module INF-0476: Computer Vision for Intelligent Systems <i>Computer Vision für Intelligente Systeme</i>		5 ECTS/LP
Version 1.1.0 (since WS23/24) Person responsible for module: Prof. Dr. Jörg-Dieter Stückler		
Learning Outcomes / Competences: Students will understand the following methodological foundations of computer vision for intelligent systems at an in-depth scientific level and will be able to implement appropriate algorithms for advanced problems: Image formation, two-view geometry, deep learning basics for images and point clouds, image motion estimation and optical flow, keypoints and point correspondences, factor graphs and probabilistic state estimation, visual odometry and visual simultaneous localization and mapping, 3D object detection, 3D mapping. Participants understand the advantages and disadvantages of different methods and can analyze and select them for applications and apply them to new problems. Students have developed skills for analyzing and structuring machine vision problems for intelligent systems and know concepts and approaches for implementing algorithms for these problems. In addition, they have the competence to recognize significant technical developments. Key qualifications: Ability to think logically, analytically and conceptually; selection and confident application of appropriate methods; independent work with textbooks; implementation of technical solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives, evaluation in the respective application context; ability to make scientifically meaningful assessments using appropriate methods. Comprehensible presentation of results; ability to work in teams.		
Workload: Total: 150 h 15 h studying of course content using provided materials (self-study) 15 h studying of course content using literature (self-study) 60 h studying of course content through exercises / case studies (self-study) 30 h lecture (attendance) 30 h exercise course (attendance)		
Conditions: - Basic programming knowledge in Python - Advantageous: Basic knowledge in Deep Learning		Credit Requirements: Passing the module exam
Frequency: irregular (usu. winter semester)	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Computer Vision for Intelligent Systems (Lecture) Mode of Instruction: lecture Language: English / German Contact Hours: 2,00		

Contents:

This lecture teaches basic methods and algorithms for computer vision for intelligent systems. The lecture covers the following topics:

- Image formation, geometric primitives and transformations.
- Two-view geometry
- Basics of deep learning for images and point clouds
- Motion estimation in images and optical flow
- Keypoints, descriptors and point correspondences
- Camera motion estimation from images
- Factor graphs and probabilistic state estimation
- Visual simultaneous localization and mapping
- 3D object detection
- 3D mapping

Literature:

Lecture slides will be provided. Additional literature will be provided in lecture and exercises.

Module INF-0499: Foundation Models in Deep Learning <i>Foundation Models in Deep Learning</i>		5 ECTS/LP
Version 1.0.0 (since SoSe24) Person responsible for module: Prof. Dr. Rainer Lienhart		
Learning Outcomes / Competences: After successful participation in this module, participants understand basics and in-depth issues and algorithms of robotics (e.g. recursive state estimation, Gaussian and non-parametric filters, Kalman filters, motion and localisation, perception, mapping, SLAM) from a probabilistic point of view and can apply learned concepts to complex, practice-relevant tasks. Students can analyse and evaluate problems in this context. Participation in this module promotes skills in logical, analytical and conceptual thinking in the field of probabilistic robotics. Students can select suitable methods from the concepts learned in a targeted manner, apply them confidently and transfer them to new problems, including those from other disciplines. The module imparts competencies for recognising current research and significant technological developments in this field.		
Key qualifications: advanced mathematical-formal logic; implementation of subject-specific solution concepts; interdisciplinary knowledge; development and implementation of solution strategies for complex problems; systematic further development of design methods; ability to solve problems under practical boundary conditions.		
Workload: Total: 150 h 30 h exercise course (attendance) 30 h lecture (attendance) 15 h studying of course content using provided materials (self-study) 60 h studying of course content through exercises / case studies (self-study) 15 h studying of course content using literature (self-study)		
Conditions: Knowledge in machine learning and machine vision (Master lecture INF-0092 "Multimedia II" or INF-0316 "Machine Learning and Computer Vision")		Credit Requirements: Passing the module examination

Module INF-0504: Medical Monitoring and Advanced Sensor Data Processing <i>Medical Monitoring and Advanced Sensor Data Processing</i>		8 ECTS/LP
Version 1.3.0 (since SoSe24) Person responsible for module: Prof. Dr. Sebastian Zaunseder		
Learning Outcomes / Competences: Subject-related competences: After successful participation, students have knowledge and competences with regard to the field of medical monitoring. Students have basic knowledge on the background of medical monitoring and common technical solutions for clinical and out-of-hospital use. They are familiar with the functional principles of various methods relevant to medical monitoring and their interpretation. Students can also contribute to the (further) development of monitoring applications. Methodological competencies: Students are able to deal independently with solutions to medical monitoring. In particular, they are able to process medical data using common script languages such as Python, to document their solutions and to interpret processing results appropriately. In addition, Students have basic competencies in the handling of monitoring data and devices for monitoring. Interdisciplinary Competencies: The students are able to apply the acquired knowledge in any area of study that deals with (medical) data. In addition, the module teaches essential problem-solving skills, whereby an abstract way of thinking as well as a structured approach to problem solving are learned. Key skills: Ability to think logically, analytically and conceptually; ability to present and document results in a comprehensible manner; ability to communicate orally and in writing in a way that is appropriate to the situation and specific to the target group; ability to work together in teams; ability to solve problems under practical boundary conditions; ability to expand existing knowledge independently; quality awareness.		
Workload: Total: 150 h 60 h studying of course content using provided materials (self-study) 60 h exercise course (attendance) 90 h studying of course content through exercises / case studies (self-study) 30 h lecture (attendance)		
Conditions: basic math skills; basic programming skills; basic knowledge on handling digital signals		Credit Requirements: Passing the module exam
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Medical monitoring and advanced sensor data processing (Lecture) Mode of Instruction: lecture Language: English / German Frequency: irregular Contact Hours: 2,00		

Contents:

The lecture deals with the fundamentals, implementations and applications of medical monitoring. The following topics, all of them elaborate with respect and in close connection to medical monitoring, are covered:

- Fundamentals of medical monitoring (basic ideas, history, current solutions, trends)
- Fundamentals of sensor data fusion
- Preprocessing approaches (e.g. denoising by conventional filters, Kalman filters and autoencoders)
- Dimension reduction and source separation (e.g. principal component analysis and independent component analysis)
- Feature extraction by functional transforms (e.g. time-frequency transforms)
- Basic detection/classification approaches

Part of the Module: Medical Monitoring and Advanced Sensor Data Processing (Exercise)

Mode of Instruction: exercise course

Language: English / German

Frequency: irregular

Contact Hours: 4,00

Contents:

The exercise teaches practical skills with relevance to the field of medical monitoring. The focus is handling and processing data from/for monitoring applications. The following contents are covered:

- Familiarization with techniques of data acquisition and handling data
- Denoising of data of variable origin
- Application of feature extraction and dimension reduction techniques
- Prediction/detection of (patho)physiological states
- Techniques for visualization and interpretation of sensor data

Module INF-0506: Search Engines and Neural Information Retrieval <i>Search Engines and Neural Information Retrieval</i>		8 ECTS/LP
Version 1.3.0 (since SoSe24) Person responsible for module: Prof. Dr. Annemarie Friedrich		
Learning Outcomes / Competences: Neural Information Retrieval leverages the power of neural networks to enhance the representation, understanding, and retrieval of information, addressing many of the challenges posed by the complexity and variability of natural language. With the recent development in the area of large language models (or more generally, foundation models), novel approaches to interactive information retrieval are developing. After taking part in the course, students are able to explain the concepts and methods, procedures, techniques and technologies related to neural information retrieval. In particular, the course covers: • Basics of traditional information retrieval methods • Vector-based document and query representations (topic modeling and neural representations) • Ranking with embeddings • Question answering, entity search, and knowledge graphs • Multimodal retrieval • Interactive information retrieval and personalization Students will be able to recognise important technical developments in the field of information retrieval. They can apply machine learning procedures, such as feature extraction, embedding learning, and pattern recognition, to information retrieval problems. They will be able to perform literature research in the area of information retrieval, and identify gaps in the state-of-the-art. They know how to make scientifically meaningful evaluations of proposed systems. They will further learn how to document and present results and complex ideas in a reasonable and meaningful way. Participants will also deepen their programming skills in Python. Key skills: Formal methods; Knowledge of advantages and disadvantages of different design alternatives; Ability to work in teams; Knowledge of workflows and processes; Ability to find solutions for practical problems; Ability to work autonomously; Quality awareness; Scientific working; Literature research.		
Workload: Total: 240 h 30 h exercise course (attendance) 60 h lecture (attendance) 120 h studying of course content through exercises / case studies (self-study) 15 h studying of course content using literature (self-study) 15 h studying of course content using provided materials (self-study)		
Conditions: Recommended: linear algebra, basic probability theory, Python programming.		Credit Requirements: Passing the module exam
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Search Engines and Neural Information Retrieval (Lecture) Language: English / German Frequency: each winter semester Contact Hours: 4,00		

Contents:

This first part of this interactive course will cover the basics of traditional search engine technology, topic modeling, query expansion, collaborative filtering, neural networks, word and document embeddings, transformers, text classification, ranking and learning to rank, question answering, and evaluation designs. The second part of the course will dive into the recent literature on neural information retrieval including (for example) multi-modal search, interactive retrieval systems, entity search, personalization, and retrieval-augmented generative artificial intelligence. We will also discuss aspects related to responsible information retrieval such as bias and transparency.

The course design is complementary to INF-0277 Analyzing Massive Datasets, which focuses on compute frameworks and algorithms for processing big data.

Module INF-0509: Embodied Artificial Intelligence <i>Embodied Artificial Intelligence</i>		8 ECTS/LP
Version 1.0.0 (since SoSe24) Person responsible for module: Prof. Dr. Jörg-Dieter Stückler		
Learning Outcomes / Competences: Students will understand fundamental and contemporary methods of embodied artificial intelligence (robot learning, reinforcement learning, visual scene perception, foundation models for robotics) at a scientific level and will gain practical experience by implementing appropriate algorithms for advanced problems in team projects. Participants understand the advantages and disadvantages of different methods and can analyze and select them for applications and apply them to new problems. Students have developed skills for analyzing and structuring problems in embodied artificial intelligence and know concepts and approaches for implementing algorithms for these problems. In addition, they have the competence to recognize significant scientific and technical developments.		
Key qualifications: Ability to think logically, analytically and conceptually; selection and confident application of appropriate methods; independent work with textbooks; implementation of technical solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives, evaluation in the respective application context; ability to make scientifically meaningful assessments using appropriate methods. Comprehensible presentation of results; ability to work in teams.

Contents:

Embodied artificial intelligence is about intelligent robots which learn to solve tasks that require perception and interaction with the environment through the agent's embodiment (sensors and actuators). More specifically, the course will cover state-of-the-art methods for robot learning and perception.

The course consists of a lecture part, which teaches theoretical basics and contemporary methods in embodied artificial intelligence, and an exercise part, which deepens the contents of the lecture in the exercises in practical team projects. The course includes the following topics:

1. Introduction to deep learning
2. Robot kinematics
3. Transformer and diffusion models
4. Model-free reinforcement learning
5. Model-based reinforcement learning
6. Imitation learning
7. Vision-language-action models
8. Object perception
9. Localization and mapping
10. Imitation learning

Literature:

Lecture slides will be provided. Additional references to literature will be provided in the lecture.

Module INF-3037: Graph Algorithms <i>Graph Algorithms</i>		8 ECTS/LP
Version 1.0.0 (since SoSe25) Person responsible for module: Prof. Dr. Pascal Lenzner		
Learning Outcomes / Competences: The goal of the lecture is to use suitably chosen examples to give a broad overview over the field of Graph Algorithms. The students will learn how to design and analyse graph algorithms for various settings . They will be able to understand and explain different graph-theoretic concepts as well as their application in different domains. They will also be able to understand and apply several practical algorithms for computing shortest paths, flows, matchings, cuts, and embeddings. For this we will formally analyze the efficiency and other properties of the employed algorithms. Moreover, the students will learn how to evaluate the impact of graph properties on complexity of graph problems. Key skills: Advanced mathematical-formal methodology, subject-specific specializations, quantitative aspects of computer science, ability to analyze and structure complex computer science problems, ability to develop and implement solution strategies for complex problems, knowledge of the advantages/disadvantages of design alternatives, evaluation in the respective application context, Ability to think logically, analytically and conceptually, selection and reliable application of suitable methods, ability to work in teams, knowledge of practical tasks, ability to present and document results in a comprehensible manner, ability to expand existing knowledge independently, quality awareness, meticulousness		
Workload: Total: 240 h 30 h studying of course content using provided materials (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study) 30 h exercise course (attendance) 60 h lecture (attendance)		
Conditions: No fixed prerequisites, but basic knowledge in the design and analysis of algorithms as well in complexity theory from the Bachelor studies will be assumed.		Credit Requirements: Passing the module exam
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Graph Algorithms (Lecture) Mode of Instruction: lecture Language: English / German Frequency: each winter semester Contact Hours: 4,00

Contents:

Graphs play a central role in the world of algorithms. For example, navigation devices use an algorithm to compute shortest paths on a graph to answer a route query. Many planning and assignment problems can also be easily modeled as problems on graphs. In principle, it is true that a great many problems can be thought of as graph problems, so designing efficient algorithms for such problems is an important subfield of theoretical computer science.

In this lecture we will enter the world of graph algorithms. On the one hand, we will learn about important algorithmic problem classes on graphs and efficient algorithms to solve them. Among other things, we will look at finding shortest paths, flows, cuts, separators, and matchings in graphs. Algorithms for these problems have a wide variety of applications, making them an important and useful tool for any algorithmicist. On the other hand, we will also study how constraints on the graphs at hand affect the complexity of the problems and their algorithmic solution. For example, many algorithmic problems are more efficiently solvable on trees and planar graphs (i.e., graphs that can be embedded in the plane without intersection) than on general graphs. We will also explore some properties of graphs that we can exploit specifically for designing efficient algorithms. For example, trees and planar graphs have small separators (sets of nodes whose removal causes the graphs to decompose into multiple context components), which helps design efficient divide & conquer algorithms.

The goal of the lecture is the development and training of a structured approach to algorithmic problems on graphs. In doing so, we will jointly develop efficient graph algorithms with appropriate data structures, prove their correctness, and analyze their resource requirements (runtime and memory). In addition, the lecture will highlight special graph classes and other important concepts in graph theory and their impact on the world of algorithms.

Module INF-3049: Trustworthy Artificial Intelligence <i>Trustworthy Artificial Intelligence</i>		5 ECTS/LP
Version 1.0.0 (since WS25/26) Person responsible for module: Prof. Dr. Bernhard Bauer Dr. Fabian Stieler		
Learning Outcomes / Competences: Students acquire knowledge of central concepts and principles of trustworthy AI, including ethical, legal and social framework conditions as well as technical requirements. They will understand how trustworthy AI systems can be designed, evaluated and documented and will be able to apply these theoretical principles to practical issues. The course presents methods and approaches that can ensure transparency, explainability, fairness, security, robustness and data protection in AI systems. These include, for example, methods of interpretable machine learning. Students learn to identify typical challenges such as bias, security risks and data protection issues and to develop suitable solutions. This also includes cybersecurity in the context of AI systems, whereby students become familiar with specific attack scenarios and develop suitable protection mechanisms conceptually. In addition, students gain in-depth insights into software engineering for AI systems. Key concepts such as machine learning operations (MLOps), AI lifecycle management and principles such as reproducibility, automation and scalability are taught. Other focal points include aspects of operating AI systems in production environments, including infrastructure, monitoring and concept drift. Furthermore, students are taught organizational and technical measures to ensure accountability, traceability and governance. They learn about relevant standards and procedures in the areas of auditing, certification and risk management of AI systems as well as approaches to the sustainable and responsible development of AI systems. Key qualifications: Understanding of interdisciplinary relationships between technology, ethics and law; teamwork and communication skills; independent acquisition of knowledge; quality awareness; ability to document AI systems in a comprehensible manner; sensitization to practical professional requirements.		
Workload: Total: 150 h 30 h lecture (attendance) 30 h exercise course (attendance) 15 h studying of course content using provided materials (self-study) 15 h studying of course content using literature (self-study) 60 h studying of course content through exercises / case studies (self-study)

Module INF-3815: Advanced Biomedical Systems Modeling and Data Science <i>Advanced Biomedical Systems Modeling and Data Science</i>		5 ECTS/LP
Version 1.0.0 (since SoSe25) Person responsible for module: Prof. Dr. Andreas Raue		
Learning Outcomes / Competences: This interdisciplinary course provides advanced-level knowledge of computational techniques in systems modeling and data science applied to complex biomedical challenges. Students will expand their expertise in mathematical modeling, machine learning, and biological data analysis. The course emphasizes both theoretical understanding and practical application through project-based learning. A solid background in biology, mathematics (calculus, linear algebra, differential equations), and programming (Python) is required. The goal of this course is to prepare students for a career path as scientists in biomedical, biotechnology or pharmaceutical industry, or for continuing their academic training and research by acquiring a PhD degree. Objectives: • Deepen understanding of systems modeling and data science principles. • Develop expertise in handling complex datasets and applying advanced models and methods. • Enhance proficiency in interpreting and presenting biomedical data using advanced models. • Strengthen project design and critical evaluation skills for scientific research.		
Workload: Total: 150 h 15 h studying of course content using literature (self-study) 60 h studying of course content through exercises / case studies (self-study) 15 h studying of course content using provided materials (self-study) 30 h lecture (attendance) 30 h exercise course (attendance)

Module MTH-1518: Riemannian Geometry <i>Riemannsche Geometrie</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Bernhard Hanke		
Contents: What is the geometry of our space? Euclidean? But how are we to know whether two parallels behind the next bush still have the same distance? How are we to judge geometry on a large scale, even in outer space, when we can hardly move away from our patch of earth? Riemannian geometry introduces a concept flexible enough to describe a geometry that looks locally Euclidean, but about whose global structure we may have no knowledge. The distinguishing feature from Euclidean geometry is curvature, the most important concept in this theory. We will study this geometry in small and large scale. Naturally, we will also cover the basics of Einstein's General Relativity, in which the geometry of space and time is coupled with the mass distribution in the universe. Submanifolds of Euclidean space Covariant derivative (Levi-Civita derivative) Curvature General relativity Geodesics in the small and large Completeness Role of curvature for topology		
Learning Outcomes / Competences: Combining geometric thinking with analytical methods, understanding the interrelationships of local and global geometry.		
Workload: Total: 240 h 2 h exercise course (attendance) 4 h lecture (attendance)		
Conditions: Introduction to Geometry		
Frequency: every 4th semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Riemannsche Geometrie Language: English Frequency: every 4th semester Workload: 2 Std. Übung (Präsenzstudium) 4 Std. Vorlesung (Präsenzstudium) Contact Hours: 6,00		
Contents:

Module MTH-1528: Differential Topology <i>Differentialtopologie</i>		8 ECTS/LP
Version 1.0.0 (since SoSe25) Person responsible for module: Prof. Dr. Bernhard Hanke		
Contents: This lecture is devoted to the theory of differentiable manifolds from the point of view of analysis and topology. The material covered is fundamental for a deeper understanding of differential geometry and global analysis. Differentiable manifolds Tangent space Flows Foliations Fiber bundles Transversality de Rham cohomology Chern-Weil theory exotic spheres H-Cobordism Theorem		
Learning Outcomes / Competences: Development and training of geometrical intuition while mastering modern mathematical language and reasoning. Understanding of the basic concepts of differential topology. Development of basic knowledge for special lectures in geometry and topology.		
Remarks: Cannot be combined together with MTH-1520.		
Workload: Total: 240 h 2 h exercise course (attendance) 4 h lecture (attendance)		
Conditions: Knowledge to elementary geometry and topology		
Frequency: every 4th semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	

Parts of the Module
Part of the Module: Differential Topology Language: German / English Frequency: every 4th semester Workload: 4 Std. Vorlesung (Präsenzstudium) 2 Std. Übung (Präsenzstudium) Contact Hours: 6,00
Contents: -

this semester

Module MTH-1538: Algebraic Topology <i>Algebraische Topologie</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Bernhard Hanke		
Contents: This module provides an introduction to algebraic topology, that is, the systematic use of algebraic tools in the study of topological problems. Mathematical content includes: Fundamental group, covering spaces, categories, cellular complexes, cellular and singular homology and cohomology, homotopy theory, fiber bundles.		
Learning Outcomes / Competences: Students will be able to use algebraic tools that allow them to translate geometric notion into exact arguments.		
Remarks: Dieses Modul kann nicht gleichzeitig mit MTH-1530 eingebracht werden		
Workload: Total: 240 h		
Conditions: Basic knowledge in algebra and geometry.		
Frequency: every 4th semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Algebraische Topologie I Language: English / German Contact Hours: 6,00		
Contents: Dieses Modul bietet eine Einführung in die Algebraische Topologie, also die systematische Nutzung algebraischer Hilfsmittel beim Studium topologischer Fragestellungen. Mathematische Inhalte sind unter anderem: Fundamentalgruppe, Überlagerungen, Kategorien, Zellkomplexe, zelluläre und singuläre Homologie und Kohomologie, Homotopietheorie, (Ko-)Faserungen		
Lehr-/Lernmethoden: Vorlesung und Übung		
Literature: Bredon, G.E.: Topology and Geometry, vol. 139, Graduate Texts in Mathematics. Springer-Verlag, 1993. Dold, A.: Lectures on Algebraic Topology, vol. 200. Module MTH-1548: Calculus of Variations <i>Variationsrechnung</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Bernd Schmidt		
Learning Outcomes / Competences: Die Student(inn)en kennen klassische Herangehensweisen sowie moderne Zugänge zu Problemen der Variationsrechnung. Sie sind in der Lage, theoretische Modelle naturwissenschaftlicher Probleme in einfachen Fällen selbst zu formulieren, solche Modelle aber auch in komplexen Situationen zu verstehen und problemorientiert zu analysieren.		
Remarks: Kann nicht gemeinsam mit MTH-1540 eingebracht werden		
Workload: Total: 240 h 2 h exercise course (attendance) 4 h lecture (attendance)		
Conditions: none		Credit Requirements: Solide Analysiskenntnisse, die die wesentlichen Inhalte der Vorlesungen Analysis 1, 2 und 3 sowie der Funktionalanalysis abdecken.
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	

Parts of the Module
Part of the Module: Variationsrechnung Language: English Frequency: irregular Workload: 2 Std. Übung (Präsenzstudium) 4 Std. Vorlesung (Präsenzstudium) Contact Hours: 6,00
Contents: klassische Probleme der Variationsrechnung, Euler-Lagrange-Gleichungen, Funktionenräume, (semi-)konvexe Analysis, direkte Methode der Variationsrechnung, Anwendungen Voraussetzungen: Solide Kenntnisse der mehrdimensionalen Differential- und Integralrechnung sowie der Grundlagen der Funktionalanalysis.
Literature: Dacorogna: Direct Methods in the Calculus of Variations. Springer.

Examination Variationsrechnung portfolio exam, graded Test Frequency: not this semester
--

Module MTH-1558: Nonlinear Partial Differential Equations <i>Nichtlineare partielle Differentialgleichungen</i>		8 ECTS/LP
Version 1.0.0		
Person responsible for module: Prof. Dr. Bernd Schmidt		
Learning Outcomes / Competences: Die Student(inn)en kennen moderne Zugänge zu ausgewählten Beispielklassen in der Theorie der partiellen Differentialgleichungen. Sie sind in der Lage, aufbauend auf den Inhalten der Vorlesung Forschungsliteratur in diesen Gebieten zu lesen und sich selbstständig in weiterführende Aspekte einzuarbeiten.		
Workload: Total: 240 h 4 h lecture (attendance) 2 h exercise course (attendance)		
Conditions: none		Credit Requirements: Solide Analysiskenntnisse, die die wesentlichen Inhalte der Vorlesungen Analysis 1, 2 und 3 sowie der Funktionalanalysis abdecken. Es wird dringend empfohlen, eine einführende Veranstaltung zu partiellen Differentialgleichungen gehört zu haben.
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	

Parts of the Module
Part of the Module: Nichtlineare Partielle Differentialgleichungen Language: English Frequency: irregular Workload: 2 Std. Übung (Präsenzstudium) 4 Std. Vorlesung (Präsenzstudium) Contact Hours: 6,00
Contents: Ausgewählte Aspekte der Theorie der Nichtlinearen Partiellen Differentialgleichungen Voraussetzungen: Solide Kenntnisse der mehrdimensionalen Differential- und Integralrechnung, Funktionalanalysis sowie der schwachen Lösungstheorie linearer elliptischer Gleichungen.
Literature: * Gilbarg, D., Trudinger, N.S.: Elliptic Partial Differential Equations of Second Order (Springer, 1977) * Giusti, E.: Direct Methods in the Calculus of Variations (World Scientific Publishing, 2003) * Giaquinta, M., Martinazzi, L.: An Introduction to the Regularity Theory for Elliptic Systems, Harmonic Maps and Minimal Graphs (Edizioni della Normale, 2012, * Evans, L.C.: Partial Differential Equations (AMS, 1998), * Renardy, M., Rogers, R.C.: An Introduction to Partial Differential Equations (Springer, 1993), * Schweizer, B.: Partielle Differentialgleichungen (Springer, 2013)

Assigned Courses:

Nichtlineare partielle Differentialgleichungen: Mathematische Methoden für die Navier-Stokes-Gleichungen
(lecture)
**(in attendance) **

Examination

Module MTH-1568: Stochastic Differential Equations <i>Stochastische Differentialgleichungen</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Dirk Blömker		
Contents: This module introduces the theory of stochastic differential equations. Ito formula, Ito isometry, Ito integral, martingales, Brownian motion, existence and uniqueness theorem, diffusion processes, partial differential equations, Black-Scholes formula, Option pricing		
Learning Outcomes / Competences: The students know the fundamental terms, concepts and phenomena of stochastic of stochastic analysis, especially of stochastic differential equations. Ability to independently compile further literature for applications in the field of financial mathematics and stochastic dynamics, Competences in the independent processing of problems, Skills in the formulation and processing of theoretical questions using the theoretical questions with the help of the methods learned Integrated acquisition of key qualifications: Independent work with (English-language) scientific literature, Scientific thinking, in-depth competences in the independent processing of problems, skills in formulating and processing theoretical questions.		
Workload: Total: 240 h 2 h exercise course (attendance) 4 h lecture (attendance)		
Conditions: A good basic knowledge of probability theory and analysis is required. and calculus. Helpful, but not absolutely necessary, is previous knowledge of in ordinary differential equations and stochastic processes.		Credit Requirements: Oral exam
Frequency: every 4th semester	Recommended Semester: 1. - 6.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	

Parts of the Module

Module MTH-1578: Dynamical Systems <i>Dynamische Systeme</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Dirk Blömker		
Contents: among others: dynamical systems, attractors, invariant manifolds, semi-flows, Markov semigroups, invariant measures, iterated mappings, chaos		
Learning Outcomes / Competences: The students know the basic terms, concepts and phenomena in the field of in the field of dynamical systems. Ability to work independently on further literature, Competences in the independent processing of problems, Skills to formulate and work on theoretical questions using the questions with the aid of the methods learnt. Integrated acquisition of key qualifications: Independent work with (English-language) scientific literature, scientific thinking, in-depth competences in the independent processing of problems, Skills in formulating and working on theoretical questions.		
Workload: Total: 240 h 4 h lecture (attendance) 2 h exercise course (attendance)		
Conditions: Good knowledge of linear algebra and analysis. Basic knowledge of functional analysis and differential equations is helpful.		Credit Requirements: oral exam
Frequency: every 4th semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Dynamische Systeme Mode of Instruction: lecture Language: English Frequency: every 4th semester Workload: 2 Std. Übung (Präsenzstudium) 4 Std. Vorlesung (Präsenzstudium) Contact Hours: 6,00

Module MTH-1588: Control Theory <i>Kontrolltheorie</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Tatjana Stykel		
Learning Outcomes / Competences: Förderung von abstraktem Denken, Anwenden analytischer und geometrischer Methoden im Anwendungszusammenhang. Die Studenten sollen in einem mathematisch relativ einfachen, linearen Kontext die grundlegenden Fragestellungen der Kontrolltheorie und Konzepte zu deren Lösung lernen. Ferner sollen sie die Befähigung zum selbständigen Erarbeiten der aktuellen Forschungsliteratur erwerben.		
Workload: Total: 240 h 2 h exercise course (attendance) 4 h lecture (attendance)		
Conditions: none		
Frequency:	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	

Parts of the Module
Part of the Module: Kontrolltheorie Language: German Frequency: irregular Workload: 2 Std. Übung (Präsenzstudium) 4 Std. Vorlesung (Präsenzstudium) Contact Hours: 6,00
Contents: Dieses Modul führt in die mathematische Kontrolltheorie ein. • Lineare Steuerungssysteme • Steuerbarkeit und Beobachtbarkeit • Rekonstruierbarkeit und Beobachtbarkeit • Stabilität • Stabilisierbarkeit und Entdeckbarkeit • Polvorgabe • Linear-quadratisches Optimierungsproblem Voraussetzungen: Kenntnisse in Analysis auf endlich dimensionalen Räumen, gewöhnliche Differentialgleichungen, Numerik
Literature: Knobloch, H.W., Kwakernaak, H. Lineare Kontrolltheorie. Springer, 1985 Sontag, E.: Mathematical Control Theory. Springer, 1998. Hinrichsen, D., Pritchard, A.J.: Mathematical Systems Theory I. Springer, 2005.

Module MTH-1598: Numerical analysis of partial differential equations <i>Numerik partieller Differentialgleichungen</i>		8 ECTS/LP
Version 1.0.0		
Person responsible for module: Prof. Dr. Daniel Peterseim		
Learning Outcomes / Competences: Understanding of finite differences as well as the ideas of the finite element method generally as well as construction of Lagrange elements with respect to simplicial triangulations and a posteriori error estimation for elliptic problems; convergence results, connections between methods as well as their advantages and disadvantages, with respect to application to concrete problems in particular; complex algorithms; integrated acquisition of key qualifications: In small groups, students learn to define problems precisely, to develop numerical solution strategies and to assess their suitability, while developing social skills for working together in a team.		
Remarks: Kann nicht mit MTH-1590 gemeinsam eingebracht werden		
Workload: Total: 240 h 2 h exercise course (attendance) 4 h lecture (attendance)		
Conditions: Recommended: analysis (particularly functional analysis), introduction to numerical analysis, numerical analysis of ordinary differential equations		
Frequency: each winter semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	

Parts of the Module
Part of the Module: <i>Numerik partieller Differentialgleichungen</i> Mode of Instruction: lecture + exercise Lecturers: Prof. Dr. Malte Peter Language: English / alle Sprachen Frequency: each winter semester Workload: 4 Std. Vorlesung (Präsenzstudium) 2 Std. Übung (Präsenzstudium) Contact Hours: 6,00
Contents: Es werden die Grundlagen der Standardmethoden zur numerischen Lösung partieller Differentialgleichungen behandelt. Finite-Differenzen-Methode auf rechteckigen und nicht rechteckigen Gebieten Finite-Elemente-Methode inkl. Triangulierung Lagrange-Elemente Adaptivität für elliptische Probleme
Literature: Grossmann, C., Ross, H.-G.: Numerische Behandlung partieller Differentialgleichungen. Teubner, 2005 . Hackbusch: Theorie und Numerik elliptischer Differentialgleichungen. Springer. 2010

Module MTH-1678: Probability IV <i>Stochastische Prozesse (Stochastik IV)</i>		8 ECTS/LP
Version 1.0.0		
Person responsible for module: Prof. Dr. Stefan Großkinsky		
Learning Outcomes / Competences: Die Studierenden sollen die nötigen mathematischen Konzepte zur Beschreibung zufälliger, zeitabhängiger Prozesse verstehen und mit ihnen umgehen können. Darüber hinaus sollen sie wichtige Beweiskonzepte und Konstruktionen aus dem Bereich der stochastischen Prozesse beherrschen.		
Remarks: Kann nicht gemeinsam mit MTH-1670 eingebracht werden		
Workload: Total: 240 h 4 h lecture (attendance) 2 h exercise course (attendance)		
Conditions: Lineare Algebra I Analysis I Analysis II Einführung in die Stochastik (Stochastik I) Einführung in die mathematische Statistik (Stochastik II)		
Frequency: each summer semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Stochastische Prozesse (Heydenreich) Lecturers: Prof. Dr. Markus Heydenreich Language: English / German Frequency: every 4th semester Contact Hours: 6,00
Contents: Es werden folgende Kernthemen behandelt: 1. Strenge Einführung des Begriffs "Stochastischer Prozess" und "Stochastisches Feld" mit Beispielen. 2. Pfadeigenschaften der Stochastischen Prozesse. 3. Gaußsche Prozesse, Lévy-Prozesse. 4. Brownsche Bewegung und ihre Eigenschaften. 5. Poisson-Prozess. 6. Irrfahrten und Konvergenz gegen Brownsche Bewegung.
Literature: Wird in der Vorlesung bekannt gegeben.

Part of the Module: Stochastische Prozesse (Großkinsky)

Lecturers: Prof. Dr. Stefan Großkinsky

Language: English / German

Frequency: every 4th semester

Workload:

2 Std. Übung (Präsenzstudium)

4 Std. Vorlesung (Präsenzstudium)

Contact Hours: 6,00

Contents:

- Prozesse in diskreter Zeit: Markov Ketten, Gaußsche Prozesse, Martingale
- Konstruktion stochastischer Prozesse nach Kolmogorov und Pfadigenschaften
- Erneuerungsprozesse, Poisson Prozess, Markov Ketten in stetiger Zeit
- Diffusionsprozesse, Brownsche Bewegung
- Sprungprozesse, Lévy Prozesse

Literature:

Wird in der Vorlesung bekannt gegeben.

Module MTH-1698: Parabolic Partial Differential Equations <i>Parabolische partielle Differentialgleichungen</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Dirk Blömker		
Contents: selected topics in parabolic PDEs, existence and uniqueness of solutions, energy estimates, dynamics		
Learning Outcomes / Competences: The students know modern approaches to selected example classes in the theory of parabolic partial differential equations. They are able to read research literature in these areas based on the contents of the lecture and to work independently on further aspects.		
Workload: Total: 240 h		
Conditions: Prerequisites: Solid knowledge of multidimensional differential and integral calculus, functional analysis. Knowledge of ordinary differential equations or the weak solution theory of linear elliptic equations is helpful.		Credit Requirements: oral exam
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Parabolische partielle Differentialgleichungen Language: English Frequency: irregular Contact Hours: 6,00		
Contents: Voraussetzungen: Solide Kenntnisse der mehrdimensionalen Differential- und Integralrechnung, Funktionalanalysis. Hilfreich sind Kenntnisse in gewöhnlichen Differentialgleichungen oder der schwachen Lösungstheorie linearer elliptischer Gleichungen.		
Examination Parabolische partielle Differentialgleichungen oral exam / length of examination: 30 minutes, graded Test Frequency: not this semester		

Module MTH-1820: Entropy and Information <i>Entropie und Information</i>		6 ECTS/LP
Version 1.1.0 (since WS15/16 to SoSe25) Person responsible for module: Prof. Dr. Fritz Colonius		
Learning Outcomes / Competences: Förderung von abstraktem Denken, Anwenden analytischer Methoden in der Dynamik. Verständnis für die Querverbindungen mathematischer Einzelgebiete am Beispiel der Beziehungen zwischen Maßtheorie, Wahrscheinlichkeitstheorie und Dynamik.		
Workload: Total: 180 h 2 h exercise course (attendance) 2 h lecture (attendance)		
Conditions: none		
Frequency:	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Entropie und Information Language: German Frequency: every 4th semester Workload: 2 Std. Übung (Präsenzstudium) 2 Std. Vorlesung (Präsenzstudium) Contact Hours: 4,00 ECTS Credits: 6.0		
Contents: Dieses Modul führt in die Aspekte der Theorie dynamischer Systeme ein. Topologische und maßtheoretische Entropie symbolische Dynamik Voraussetzungen:		
Literature: Lind, D., Marcus, B.: An introduction to Symbolic Dynamics and Coding. Cambridge University Press, 2003. Robinson: Dynamical Systems, Stability, Symbolic Dynamics and Chaos. CRC Press, 1998.		
Examination Entropie und Information oral exam / length of examination: 30 minutes, graded		

Module MTH-1860: Introduction to Projective Geometry <i>Einführung in die Projektive Geometrie</i>		6 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Dirk Hachenberger		
Contents: Die Projektive Geometrie ist eines der klassischen Teilgebiete der Reinen Mathematik. Dieses Gebiet ist ursprünglich aus Fragen der Perspektive entstanden und kann heutzutage kurz als "Lineare Algebra vom geometrischen Standpunkt aus gesehen" bezeichnet werden. Alle notwendigen geometrischen Begriffe werden in der Vorlesung entwickelt werden. Neben den klassischen Fragestellungen (Einführung von Koordinaten, Kollineationen, Projektivitäten, Kegelschnitte und Quadriken...) sollen insbesondere die endlichen projektiven Räume behandelt werden. Diese Strukturen haben durch Bezüge zu Designs, Codes und Kryptosystemen neuerdings auch eine gewisse Bedeutung in den Anwendungen erlangt. Einige derartige Aspekte sollen ebenfalls angesprochen werden.		
Learning Outcomes / Competences: Erkenntnis der engen Verflechtung von Algebra und Geometrie; Mathematische Allgemeinbildung (Einblick in eines der klassischen Gebiete der Mathematik, das derzeit im Studium fast immer zu kurz kommt.		
Workload: Total: 180 h 4 h lecture (attendance)		
Conditions: Module Linear Algebra I (MTH-1000) - recommended Module Linear Algebra II (MTH-1010) - recommended		
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: any

Module MTH-1900: Introduction to Cryptography <i>Einführung in die Kryptographie</i>		6 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Dirk Hachenberger		
Contents: Die Kryptographie ist dasjenige Teilgebiet der Mathematik, das sich mit der sicheren Übermittlung geheim zu haltender Nachrichten bzw. umgekehrt mit der Analyse verschlüsselter Texte beschäftigt. Derartige Themenbereiche sind von zunehmender wirtschaftlicher Bedeutung (Electronic Banking). Dabei ergeben sich viele interessante Fragestellungen wie z.B. die Möglichkeit von elektronischen Unterschriften und Zeitstempeln sowie Fragen der Authentifikation und Zugangskontrolle. In der Vorlesung soll eine Einführung in die wichtigsten Probleme und Methoden der Kryptographie gegeben werden. Nach einer kurzen historischen Einleitung werden auch einige praktisch verwendete Systeme (DES, AES, RSA-System) behandelt.		
Learning Outcomes / Competences: Algebra, Zahlentheorie und Kombinatorik sind klassische Kerngebiete der Reinen Mathematik. Die Studenten sollen an einem konkreten Beispiel erkennen, dass auch diese Teile der Mathematik praktisch relevante Anwendungen hat.		
Workload: Total: 180 h 4 h lecture (attendance)		
Conditions: Als Voraussetzungen werden lediglich die Grundvorlesungen in Linearer Algebra I und II sowie elementare Wahrscheinlichkeitstheorie benötigt.		
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: any

Module MTH-1950: Coding Theory <i>Codierungstheorie</i>		6 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Dirk Hachenberger		
Contents: Die Codierungstheorie ist eine relativ junge mathematische Disziplin, die sich mit dem Entwurf von optimalen fehlererkennenden und fehlerkorrigierenden Codes beschäftigt. Solche Codes werden überall dort verwendet, wo Informationen (bildlich gesprochen) über einen gestörten Nachrichtenkanal übertragen werden: Durch eine geeignete Codierung der Information vor der Sendung, ist es möglich auch bei Verfälschung die ursprüngliche Nachricht zu rekonstruieren. Zu den wichtigsten Anwendungen gehören die Übertragung von Satellitenbildern sowie die Verbesserung der Qualität beim Abspielen von Compact Discs. Der mathematische Reiz der Codierungstheorie liegt im Zusammenspiel von Algebra, Kombinatorik und Zahlentheorie, zumal die sog. linearen Codes über endlichen Körpern sehr erfolgreich in der Praxis eingesetzt werden. Nach einer Einführung und der Formulierung der Hauptproblemstellung verfolgen wir in dieser Vorlesung das Ziel, einige der wichtigsten Klassen von (optimalen) Codes zu beschreiben: • Dazu zählen zunächst die <i>Hamming-Codes</i> und die <i>Reed-Solomon Codes</i>, die zur allgemeineren Familie der <i>zyklische Codes</i>, insbesondere den <i>BCH-Codes</i> gehören. • Die <i>Reed-Muller-Codes</i> dienen als Ausgangspunkt für die Konstruktion der (optimalen) <i>Kerdock-</i> und <i>Preparata-Codes</i>. • Die grundlegenden <i>Goppa-Codes</i> sind im Rahmen der <i>Funktionenkörper-Codes</i> mittlerweile vielfach verallgemeinert worden.		
Learning Outcomes / Competences: Algebra, Kombinatorik und Zahlentheorie sind klassische Kerngebiete der Mathematik. An dem konkreten Beispiel der Codierungstheorie sollen die Studierenden erkennen, dass durch das Zusammenspiel sehr interessante praktische Problemstellungen adäquat modelliert und gelöst werden können.		
Workload: Total: 180 h 4 h lecture (attendance)

Parts of the Module		
Part of the Module: Codierungstheorie Mode of Instruction: lecture Language: German Frequency: irregular Workload: 4 Std. Vorlesung (Präsenzstudium) Contact Hours: 4,00 ECTS Credits: 6.0		

Learning Outcome:

Algebra, Kombinatorik und Zahlentheorie sind klassische Kerngebiete der Mathematik. An dem konkreten Beispiel der Codierungstheorie sollen die Studierenden erkennen, dass durch das Zusammenspiel sehr interessante praktische Problemstellungen adäquat modelliert und gelöst werden können.

Contents:

Die Codierungstheorie ist eine relativ junge mathematische Disziplin, die sich mit dem Entwurf von optimalen fehlererkennenden und fehlerkorrigierenden Codes beschäftigt.

Solche Codes werden überall dort verwendet, wo Informationen (bildlich gesprochen) über einen gestörten Nachrichtenkanal übertragen werden: Durch eine geeignete Codierung der Information vor der Sendung, ist es möglich auch bei Verfälschung die ursprüngliche Nachricht zu rekonstruieren.

Zu den wichtigsten Anwendungen gehören die Übertragung von Satellitenbildern sowie die Verbesserung der Qualität beim Abspielen von Compact Discs. Der mathematische Reiz der Codierungstheorie liegt im Zusammenspiel von Algebra, Kombinatorik und Zahlentheorie, zumal die sog. linearen Codes über endlichen Körpern sehr erfolgreich in der Praxis eingesetzt werden.

Nach einer Einführung und der Formulierung der Hauptproblemstellung verfolgen wir in dieser Vorlesung das Ziel, einige der wichtigsten Klassen von (optimalen) Codes zu beschreiben:

- Dazu zählen zunächst die *Hamming-Codes* und die *Reed-Solomon Codes*, die zur allgemeineren Familie der *zyklische Codes*, insbesondere den *BCH-Codes* gehören.
- Die *Reed-Muller-Codes* dienen als Ausgangspunkt für die Konstruktion der (optimalen) *Kerdock-* und *Preparata-Codes*.
- Die grundlegenden *Goppa-Codes* sind im Rahmen der *Funktionenkörper-Codes* mittlerweile vielfach verallgemeinert worden.

Literature:

Folgende Liste ist lediglich eine kleine Auswahl. Wir werden zusammen mit dem Vorlesungsskript eine umfassendere Literaturliste ausgeben.

Module MTH-1978: Lie Groups and Their Representations <i>Liegruppen und ihre Darstellungen</i>		8 ECTS/LP
Version 1.0.0		
Person responsible for module: Prof. Dr. Jost-Hinrich Eschenburg		
Learning Outcomes / Competences: Ziel der Vorlesung ist es, die Kompakten Liegruppen und ihre Darstellungen (Stichwort: Weylsche Charakterformel) zu verstehen.		
Workload: Total: 240 h 4 h lecture (attendance) 2 h exercise course (attendance)		
Conditions: none		
Frequency:	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	

Parts of the Module
Part of the Module: Liegruppen und ihre Darstellungen Language: German Workload: 2 Std. Übung (Präsenzstudium) 4 Std. Vorlesung (Präsenzstudium) Contact Hours: 6,00
Contents: Symmetrien werden in der Mathematik durch Gruppen beschrieben. Für den Würfel zum Beispiel gibt es 24 nicht unterscheidbare (achsenparallele) Positionen, deren Übergänge durch eine Gruppe von 24 Drehungen beschrieben werden. Neben solchen diskreten Symmetrien gibt es auch kontinuierliche, wie zum Beispiel bei der Kugel: Sie lässt sich durch beliebige Drehungen um ihr Zentrum in eine andere, ununterscheidbare Lage bringen. Solche Symmetrien werden durch kontinuierliche Gruppen, sog. Lie-Gruppen beschrieben (nach dem norwegischen Mathematiker Sophus Lie benannt). Das einfachste nichttriviale Beispiel ist die Gruppe aller Drehungen um den Ursprung im euklidischen Raum, die Drehgruppe $SO(3)$. Sie ist nicht nur eine Gruppe, sondern gleichzeitig eine differenzierbare Mannigfaltigkeit (eine Untermannigfaltigkeit im Vektorraum aller reellen 3×3-Matrizen), und die Gruppenoperationen sind differenzierbare Abbildungen. Die Drehgruppe wirkt durch Transformationen auf der Kugel und kennzeichnet damit die Symmetrien der Kugel. Mit jeder abstrakten Gruppe ist also auch ihre Wirkung durch Transformationen auf bestimmten Räumen (anderen Mannigfaltigkeiten) von Bedeutung. Die einfachsten Wirkungen sind die linearen: das sind differenzierbare Gruppenhomomorphismen von einer Gruppe G in eine Matrizen­gruppe, d.h. in die Gruppe der invertierbaren linearen Abbildungen auf einem Vektorraum. Die Gruppe $SO(3)$ wirkt linear auf dem dreidimensionalen euklidischen Raum, aber sie kann auch noch auf andere Arten als Matrizen­gruppe dargestellt werden: Eine Drehmatrix A konjugiert eine symmetrische spurfreie 3×3-Matrix S zu einer anderen solchen Matrix $S' = ASA^*$; damit bewirkt A eine lineare Transformation S nach S' auf dem 5-dimensionalen Vektorraum der spurfreien symmetrischen reellen 3×3-Matrizen n. Damit haben wir eine 5-dimensionale Darstellung der Gruppe $SO(3)$. Ziel der Vorlesung ist es, die Kompakten Liegruppen und ihre Darstellungen (Stichwort: Weylsche Charakterformel) zu verstehen. Voraussetzungen:

Module MTH-1998: Graph Theory <i>Graphentheorie</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: apl. Prof. Dr. Dirk Hachenberger		
Learning Outcomes / Competences: Graphen dienen praktisch als Standardmodell für jede Art von Objekten, die mit einer binären Relation versehen sind. Anhand ausgewählter Themengebiete erwerben Studierende anhand des Studiums grundlegender Problemstellungen ein tieferes Verständnis für diskrete Strukturen. Dabei wird insbesondere die algebraische, kombinatorisch und zahlentheoretische Denkweise geschult.		
Remarks: Die Module MTH-1990 und MTH-1991 unterscheiden sich im Aufwand (SWS und LP), sind aber inhaltlich nahezu identisch. Daher dürfen Studierende nur eines dieser beiden Module einbringen.		
Workload: Total: 240 h		
Conditions: Lineare Algebra I und II, Grundlagen der Algebra, der Kombinatorik und der elementaren Zahlentheorie		Credit Requirements: Bestehen der Modulprüfung Ausschluss-Bedingung: Dieses Modul darf nicht eingebracht werden, wenn das Modul MTH-1990 bereits eingebracht wurde!
Frequency: irregular	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]

Contents: Markowitz-Portfoliooptimierung, Indextracking & Portfolioreplikation, Cash-Flow-Matching & Portfolio Immunisierung, Szenariooptimierung & Stochastische Optimierung, Robuste Optimierung im Asset Management, Semi-infinite Optimierung für Bewertungsprobleme, Dynamische Optimierung für Stoppprobleme
Examination Financial Optimization module exam, Mündliche Prüfung à 30 Minuten oder Klausur à 120 Minuten, graded Test Frequency: this semester Description: Mündliche Prüfung à 30 Minuten

Module MTH-2010: Numerics of Stochastic Differential Equations <i>Numerik Stochastischer Differentialgleichungen</i>		6 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Dirk Blömker		
Contents: numerical method for stochastic differential equations, Euler-Maruyama, weak and strong convergence, error estimates		
Learning Outcomes / Competences: The students know the basic terms, concepts and phenomena of the numerical treatment of stochastic differential equations. of the numerical treatment of stochastic differential equations, can implement the corresponding algorithms and are familiar with the basics of stochastic analysis. Ability to work independently on further literature. Competences in the independent processing and implementation of numerical algorithms, Skills in formulating and working on theoretical and applied problems using the and applied questions with the help of the methods learnt. Integrated acquisition of key qualifications: Independent work with (English-language) scientific literature, working with scientific computers, in-depth competences in the independent processing of problems, Skills in formulating and working on applied questions.		
Workload: Total: 180 h 2 h exercise course (attendance) 2 h lecture (attendance)		
Conditions: knowledge in stochastic differential equations and numerical methods for ordinary differential equations are helpful		Credit Requirements: oral exam
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: any

Part of the Module: Numerik Stochastischer Differentialgleichungen Language: German / English Frequency: irregular Workload: 2 Std. Übung (Präsenzstudium) 2 Std. Vorlesung (Präsenzstudium) Contact Hours: 4,00 ECTS Credits: 6.0

Contents:

Dieses Modul führt in die Theorie der numerischen Behandlung stochastischer Differentialgleichungen ein.
Stochastische Differentialgleichungen
Zeitdiskretisierung
Fehlerabschätzungen
Implementierung numerischer Verfahren
Spektrales Galerkinverfahren für stochastische partielle DGL
Voraussetzungen: Die Vorlesung verwendet die grundlegende Theorie stochastischer Differentialgleichungen.
Zwingend notwendig ist ein gutes Grundwissen in der Wahrscheinlichkeitstheorie, stochastischen Prozessen und der Analysis.
Hilfreich, aber nicht zwingend notwendig, sind Vorkenntnisse in gewöhnlichen Differentialgleichungen und Numerik gewöhnlicher Differentialgleichungen, sowie Programmiererfahrung.

Examination**Numerik Stochastischer Differentialgleichungen**

oral exam / length of examination: 30 minutes, graded

Module MTH-2030: Parametric Optimisation <i>Parametrische Optimierung</i>		5 ECTS/LP
Version 1.0.0 (since SoSe17) Person responsible for module: Prof. Dr. Ralf Werner		
Contents: - Parametrische lineare Optimierung - Parametrische unrestringierte nicht-lineare Optimierung - Parametrische restringierte nicht-lineare Optimierung - Anwendungen		
Learning Outcomes / Competences: - Erarbeitung der mathematischen Grundlagen der parametrischen Optimierung - Qualifizierung zur Anwendung in Theorie und Praxis - Befähigung zum selbständigen Erarbeiten weiterführender Fachliteratur		
Remarks: Die Veranstaltung wird vorzugsweise als Blockveranstaltung angeboten.		
Workload: Total: 150 h 3 h lecture and exercise course (attendance)		
Conditions: - Kenntnisse in Optimierung (etwa im Umfang von Optimierung I und II) - Kenntnisse in numerischen Optimierungsverfahren (etwa Numerische Verfahren der nicht-linearen Optimierung) - Grundkenntnisse in Funktionalanalysis		Credit Requirements: Bestehen der Modulprüfung
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]

Module MTH-2178: Time Series Analysis <i>Zeitreihenanalyse (Stochastik IV)</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Gernot Müller		
Learning Outcomes / Competences: Fähigkeit, mit Hilfe statistischer Methoden zeitliche Abhängigkeiten in Daten aufzudecken, zu beschreiben, und für die Zustandsschätzung und Vorhersage zu nutzen.		
Workload: Total: 240 h 4 h lecture (attendance) 2 h exercise course (attendance)		
Conditions: Stochastik I, Stochastik II		
Frequency: jedes 3. Semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Zeitreihenanalyse Mode of Instruction: lecture + exercise Lecturers: Prof. Dr. Gernot Müller Language: German Frequency: jedes 3. Semester Contact Hours: 6,00
Contents: stationäre stochastische Prozesse, Autokovarianzfunktion, WN- und ARMA-Prozesse, Analyse im Zeitbereich, Analyse im Frequenzbereich, Periodogramm, Schätzen von Modellparametern, Vorhersage, rekursive Algorithmen, Zustandsraum-Modelle
Literature: Brockwell, P.J., Davis, R.A. (1991 / 2009). Time Series - Theory and Methods. Springer
Examination Zeitreihenanalyse module exam, Mündliche Prüfung à 30 Minuten oder Klausur à 90 Minuten, graded Test Frequency: not this semester Description: Die Prüfungsform wird rechtzeitig bekannt gegeben.

Module MTH-2218: Stochastic Evolution Equations <i>Stochastische Evolutionsgleichungen</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Dirk Blömker		
Contents: Infinite dimensional spaces Fourier series and transforms cylindrical Wiener processes analytic semigroups stochastic evolution equations stochastic dynamical systems		
Learning Outcomes / Competences: The students know the basic terms, concepts and phenomena in the field of stochastic evolution equations and stochastic dynamic systems. Ability to work independently on further research literature, competences in the independent processing of problems, skills in the formulation and processing of theoretical questions with the help of the methods learned. Integrated acquisition of key qualifications: Independent work with (English-language) scientific literature, scientific thinking, deepened competences in the independent processing of problems.		
Workload: Total: 240 h		
Conditions: Knowledge of calculus on infinite dimensional spaces and basic knowledge of stochastics.		
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Stochastic Evolution Equations Language: German Frequency: irregular Contact Hours: 6,00		
Contents: -		
Examination Stochastic Evolution Equations oral exam / length of examination: 30 minutes, graded Test Frequency: not this semester		

Module MTH-2228: Adaptive Finite Element Methods <i>Adaptive Finite Elemente-Verfahren</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Daniel Peterseim		
Contents: Diese Vorlesung betrachtet fortgeschrittene Finite-Elemente-Verfahren mit folgenden Inhalten: In dieser Vorlesung werden Theorie und Implementierung fortgeschrittener Finite-Elemente-Verfahren betrachtet. Dies beinhaltet die folgenden Themengebiete: 1. Residuenbasierte und hierarchische Fehlerschätzer 2. Effizienz und Zuverlässigkeit von Fehlerschätzern 3. Implementierung adaptiver finiter Elemente mit hängenden Knoten 4. Dual gewichtete Residuen 5. Unstetige Galerkin-Verfahren (discontinuous Galerkin, DG) für Transportprobleme 6. DG-Verfahren für Erhaltungsgleichungen		
Learning Outcomes / Competences: In dieser Vorlesung werden Theorie, Anwendung und Implementierung fortgeschrittener Finite-Elemente-Verfahren erlernt, mit einem Schwerpunkt auf A-Posteriori-Fehlerschätzer für Finite Elemente-Approximationen partieller Differentialgleichungen sowie nicht-konforme Finite-Elemente-Verfahren.		
Workload: Total: 240 h 2 h exercise course (attendance) 4 h lecture (attendance)		
Conditions: Numerik partieller Differentialgleichungen		
Frequency: irregular	Recommended Semester: 2. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any

Module MTH-2257: Symplectic Geometry <i>Symplectic Geometry</i>		8 ECTS/LP
Version 1.0.0 (since SoSe25) Person responsible for module: Prof. Dr. Kai Cieliebak		
Learning Outcomes / Competences: Learning about techniques of symplectic geometry and their applications in the theory of classical mechanical systems.		
Remarks: Cannot be combined together with MTH-2250.		
Workload: Total: 240 h		
Conditions: none		Credit Requirements: Passing the module exam.
Frequency: every 4th semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Symplectic Geometry and Hamiltonian Dynamics Language: English / German Frequency: every 4th semester Contact Hours: 6,00		
Contents: This course is an introduction to symplectic techniques in the theory of Hamiltonian systems. It covers the following topics: Hamilton's equations, symplectic manifolds, symmetries and Noether's theorem, symplectic reduction, rigid bodies, integrable systems, stability and the KAM theorem, chaos, applications to celestial mechanics, fluid dynamics, and quantum mechanics. Voraussetzungen: Basic differential geometry (manifolds, differential forms)		
Literature: V.I.Arnold, Mathematical Methods of Classical Mechanics (Springer) H.Hofer and E.Zehnder, Symplectic Invariants and Hamiltonian Dynamics (Birkhaeuser)		
Assigned Courses: Symplectic Geometry (lecture + exercise) <i>*(in attendance) *</i>		
Examination Symplectic Geometry and Hamiltonian Dynamics oral exam / length of examination: 30 minutes, graded Test Frequency: this semester		

Module MTH-2280: Stochastic Models for Financial and Energy Markets <i>Stochastische Modelle für Finanz- und Energiemärkte</i>		3 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Gernot Müller		
Learning Outcomes / Competences: Kenntnisse über die Funktionsweise und die theoretischen Eigenschaften von Modellen, die zur Beschreibung von Preisen an Finanz- und Energiemärkten geeignet sind; Fähigkeit, die Modelle auf Daten anzuwenden.		
Workload: Total: 90 h 2 h lecture (attendance)		
Conditions: Stochastik I / II, empfohlen: Zeitreihenanalyse		
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 2,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Stochastische Modelle für Finanz- und Energiemärkte Mode of Instruction: lecture Lecturers: Prof. Dr. Gernot Müller Language: German Frequency: irregular Contact Hours: 2,00 ECTS Credits: 3.0		
Contents: Levy-Prozesse, alpha-stabile Zufallsvariablen, alpha-stabile Prozesse, ARMA-Modelle, SV-Modelle, CARMA-Modelle, zeitstetige SV-Modelle, COGARCH-Modelle, Schätzverfahren; Anwendungen auf Finanz- und Energiemarkt-Daten.		
Literature: neuere wissenschaftliche Veröffentlichungen		
Examination Stochastische Modelle für Finanz- und Energiemärkte module exam, Mündliche Prüfung à 30 Minuten oder Klausur à 90 Minuten, graded Test Frequency: not this semester Description: Die Prüfungsform wird rechtzeitig bekannt gegeben.		

Module MTH-2328: Markov Chains and Monte-Carlo-Simulation <i>Markov-Ketten und Monte-Carlo-Simulation</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Gernot Müller		
Learning Outcomes / Competences: Verständnis der mathematischen Konzepte für Markov-Ketten, Verständnis der Funktionsweise von Markov-Chain-Monte-Carlo-Algorithmen, Fähigkeit, solche Algorithmen selbstständig an Modelle zu adaptieren.		
Workload: Total: 240 h 4 h lecture (attendance) 2 h exercise course (attendance)		
Conditions: Stochastik I / Stochastik II		
Frequency: every 4th semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Markov-Ketten und Monte-Carlo-Simulation Mode of Instruction: lecture + exercise Lecturers: Prof. Dr. Gernot Müller Language: German Frequency: every 4th semester Workload: 2 Std. Übung (Präsenzstudium) 4 Std. Vorlesung (Präsenzstudium) Contact Hours: 6,00		
Contents: Markov-Ketten in diskreter / stetiger Zeit und mit diskretem / stetigem Zustandsraum, Stationarität, Ergodizität, Reversibilität, Markov-Chain-Monte-Carlo-Algorithmen		
Literature: Bremaud, P. (2008). Markov Chains, Gibbs Fields, Monte Carlo Simulation, and Queues. Springer. Meyn, S.P., Tweedie, R.L. (1993). Markov Chains and Stochastic Stability. Springer. Robert, C.P., Casella, G. (2004). Monte Carlo Statistical Methods. Springer		
Examination Markov-Ketten und Monte-Carlo-Simulation module exam, Mündliche Prüfung à 30 Minuten oder Klausur à 90 Minuten, graded Test Frequency: not this semester Description: Die Prüfungsform wird rechtzeitig bekannt gegeben.		

Module MTH-2330: Ergodic Theory and Random Dynamical Systems <i>Ergodentheorie und zufällige Dynamische Systeme</i>		6 ECTS/LP
Version 1.0.0 (since WS15/16 to SoSe25) Person responsible for module: Prof. Dr. Fritz Colonius		
Learning Outcomes / Competences: Verständnis der Konzepte zur maßtheoretischen Analyse von dynamischen Systemen bis hin zum Multiplikativen Ergodentheorem und seinem Beweis.		
Workload: Total: 180 h		
Conditions: none		
Frequency:	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Ergodentheorie und zufällige Dynamische Systeme Language: German Frequency: irregular Contact Hours: 4,00 ECTS Credits: 6.0		
Contents: Das Ziel ist der Beweis des Multiplikativen Ergoden-theorems (MET) für zufällige dynamische Systeme in diskreter Zeit. Es beschreibt das Stabilitätsverhalten linearer Systeme. Dafür werden Grundlagen aus der Ergodentheorie wie der Birkhoffsche Ergodensatz und der subadditive Ergodensatz sowie einige Hilfsmittel aus der Multilinearen Algebra benötigt. Diese Hilfsmittel werden in der Vorlesung entwickelt und dann zum Beweis des MET verwendet. Voraussetzungen: gute Kenntnis des Lebesgue-Integrals		
Literature: wird in der Vorlesung bekanntgegeben		
Examination Ergodentheorie und zufällige Dynamische Systeme oral exam / length of examination: 20 minutes, graded		

Module MTH-2380: Bayesian Statistics and Econometrics <i>Bayessche Statistik und Ökonometrie</i>		6 ECTS/LP
Version 2.0.0 (since SoSe17) Person responsible for module: Prof. Dr. Gernot Müller		
Learning Outcomes / Competences: Verständnis der mathematischen Konzepte in der Bayesschen Statistik, Kenntnisse über Vor- und Nachteile der Bayesschen Statistik gegenüber der frequentistischen Statistik, Kenntnisse über Einsatzmöglichkeiten der Bayesschen Statistik in der Ökonometrie, Fähigkeit, Bayessche Verfahren bei praktischen Problemen selbstständig einzusetzen.		
Workload: Total: 180 h 3 h lecture (attendance) 1 h exercise course (attendance)		
Conditions: Stochastik I, Stochastik II		
Frequency: every 4th semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Bayessche Statistik und Ökonometrie Mode of Instruction: lecture + exercise Lecturers: Prof. Dr. Gernot Müller Language: German Frequency: every 4th semester Contact Hours: 4,00 ECTS Credits: 6.0
Contents: Grundlagen der Bayesschen Statistik, Prior-Verteilungen (konjugierte, nichtinformative), Posterior-Verteilungen, Optimalität von Bayesschätzern, Bayes-Tests, Schätzungen der Posterior-Verteilung über MCMC Methoden, Bayessche Netzwerke, Anwendungen der Bayesschen Statistik in der Ökonometrie. Voraussetzungen: Stochastik 1 und 2
Literature: Blake, A., and Mumtaz, H. (2012). Applied Bayesian Econometrics for Central Bankers. Bank of England / CCBS Technical Handbook No. 4. Carlin, B.P., and Louis, Th.A. (2009). Module MTH-2510: Advanced Methods in Machine Learning <i>Advanced Methods in Machine Learning</i>		3 ECTS/LP
Version 1.0.0 (since WS20/21) Person responsible for module: Prof. Dr. Gernot Müller		
Contents: basics of machine learning, learnability, bias-complexity tradeoff, VC-dimension, deep feedforward networks, several case studies		
Learning Outcomes / Competences: Understanding of advanced concepts of machine learning; ability to apply these concepts to data and to interpret the results		
Workload: Total: 90 h 1 h exercise course (attendance) 1 h lecture (attendance)		
Conditions: Stochastik I, Stochastik II		Credit Requirements: Passing the module exam
Frequency: irregular / 4th semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 2,00	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Advanced Methods in Machine Learning Mode of Instruction: lecture + exercise Lecturers: Prof. Dr. Gernot Müller Language: German / English Frequency: irregular every 4th semester Contact Hours: 2,00 ECTS Credits: 3.0
Contents: -
Literature: recent publications about machine learning (depending on the current semester)
Examination Advanced Methods in Machine Learning module exam, Mündliche Prüfung à 30 Minuten oder Klausur à 60 Minuten / length of examination: 60 minutes, graded Test Frequency: not this semester

Module MTH-2511: Advanced Methods in Machine Learning II <i>Advanced Methods in Machine Learning II</i>		3 ECTS/LP
Version 1.0.0 (since WS21/22) Person responsible for module: Prof. Dr. Gernot Müller		
Contents: linear predictors, half-spaces, Perceptron algorithm, boosting, AdaBoost, support vector machines		
Learning Outcomes / Competences: Understanding of advanced concepts of machine learning; ability to apply these concepts to data and to interpret the results		
Workload: Total: 90 h 1 h exercise course (attendance) 1 h lecture (attendance)		
Conditions: Stochastik I, Stochastik II, AMML (MTH-2510)		Credit Requirements: Passing the module exam
Frequency: irregular / 4h semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 2,00	Repeat Exams Permitted: according to the examination regulations of the study program

--

Module MTH-2581: Advanced Survival Analysis <i>Advanced Survival Analysis</i>		8 ECTS/LP
Version 1.2.0 (since WS22/23) Person responsible for module: Prof. Dr. Sarah Friedrich		
Contents: • Besonderheiten von Überlebenszeitdaten: Zensierung/Trunkierung • Martingale, Zählprozesse, stochastische Integrale • Nelson-Aalen, Kaplan-Meier und Aalen-Johansen Schätzer • Konkurrierende Risiken und Mehrstadienmodelle • Cox Regression • Asymptotik (schwache Konvergenz, gleichmäßige Konsistenz), Martingaltheorie		
Learning Outcomes / Competences: Nach der Teilnahme an diesem Modul verfügen die Studierenden über detailliertes und aktuelles Wissen auf dem Gebiet der Überlebenszeitanalyse (Survival Analysis). Sie können Problemstellungen und Ergebnisse des Gebiets präzise beschreiben und diskutieren. Darüber hinaus verstehen die Studierenden mathematische Konzepte, Methoden, Verfahren und Techniken, um Ereigniszeitdaten zu analysieren.		
Workload: Total: 240 h 4 h lecture (attendance) 2 h exercise course (attendance)		
Conditions: Stochastik I + II		Credit Requirements: Bestehen der Modulprüfung
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Advanced Survival Analysis

Module MTH-2600: Nonparametric Statistics <i>Nichtparametrische Statistik</i>		6 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. Sarah Friedrich		
Contents: - Besonderheiten der nichtparametrischen Statistik: Nichtparametrische Effekte und Hypothesen im Vergleich zur parametrischen und semi-parametrischen Statistik - Empirische Verteilungen und Ränge - Relative Effekte und deren Schätzer - Einfaktorielle Versuchspläne: Wilcoxon-Mann-Whitney-Test, das nichtparametrische Behrens-Fischer-Problem, Kruskal-Wallis-Test - Mehrfaktorielle Versuchspläne		
Learning Outcomes / Competences: Nach der Teilnahme an diesem Modul kennen die Studierenden den Unterschied zwischen der nichtparametrischen und der parametrischen Datenanalyse. Sie erkennen, wann eine nichtparametrische Datenanalyse notwendig ist, sind mit den Grundbegriffen der Rangstatistiken vertraut, können Rangverfahren für ausgewählte faktorielle Versuchspläne durchführen und kennen deren theoretische, mathematische Grundlagen.		
Workload: Total: 180 h 2 h exercise course (attendance) 2 h lecture (attendance)		
Conditions: Stochastik I und II		Credit Requirements: Bestehen der Modulprüfung
Frequency: irregular (usu. winter semester)	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Übung Nichtparametrische Statistik Mode of Instruction: lecture + exercise Language: German / English		
Literature: Brunner, Konietzschke, Bathke: <i>Rank and Pseudo-Rank Procedures for Independent Observations in Factorial Designs</i> , Springer 2018 Brunner, Munzel: <i>Nichtparametrische Datenanalyse</i> , Springer 2013		
Examination Nichtparametrische Statistik module exam, Die genauer Prüfungsform wird in der jeweiligen Veranstaltung bekannt gegeben., graded Test Frequency: not this semester		

Module MTH-2670: Computational Algebraic Geometry <i>Computational Algebraic Geometry</i>		6 ECTS/LP
Version 1.0.0 (since SoSe24) Person responsible for module: Prof. Dr. André Uschmajew		
Contents: 1. Polynomial Rings 2. Gröbner Bases 3. Elimination Theory 4. Computer Algebra Systems 5. Applications		
Learning Outcomes / Competences: In this lecture we will learn about the algebra and the geometry of nonlinear polynomial equations. We will develop the theory of polynomial algebra and we will discuss how to solve these systems algorithmically using computer algebra. Depending on time and interest of the participants, we will see selected applications in statistics and data science.		
Workload: Total: 180 h		
Conditions: Linear Algebra. A course in abstract algebra is useful but not necessary.		Credit Requirements: Bestehen der Modulprüfung
Frequency:	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4,00	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Computational Algebraic Geometry Language: English / German Frequency: einmalig SoSe Contact Hours: 4,00 ECTS Credits: 6.0
Literature: David A. Cox, John Little, and Donal O'Shea. Ideals, Varieties, and Algorithms: An Introduction to Computational Algebraic Geometry and Commutative Algebra. Springer, 2007. Viviana Ene and Jurgen Herzog. Gröbner Bases in Commutative Algebra. American Mathematical Society, 2012.

Examination Computational Algebraic Geometry oral exam / length of examination: 30 minutes, graded Test Frequency: not this semester

Module MTH-2698: Inverse Problems <i>Inverse Probleme</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Jan-Frederik Pietschmann		
Contents: * Charakterisierung inverser Aufgaben anhand von angewandten Beispielen aus der Mathematik, den Naturwissenschaften und dem Ingenieurwesen * die Hadamard'sche Korrektheitsdefinition und das Phänomen der Inkorrektheit * Inverse Probleme als lineare und nichtlineare Operatorgleichungen in Banach- und Hilberträumen mit Schwerpunkt auf linearen Problemen * Singulärwertzerlegung kompakter Operatoren und Grad der Inkorrektheit * Theorie und Praxis der Regularisierung inkorrektur Aufgaben mit Mitteln der Analysis, Numerik, Optimierung und Stochastik * Konvergenzraten und Quelldarstellungen * Statistische Inverse Probleme		
Learning Outcomes / Competences: Ziel dieses Moduls ist die Einführung in die Mathematik inverser Probleme, wobei sowohl die angewandte Komponente (naturwissenschaftlich-technische und ökonomische Probleme inverser Natur) als auch die theoretische Komponente (funktionalanalytische Behandlung, Nutzung von Techniken der Analysis, Numerik, Optimierung und Stochastik) eine unverzichtbare Rolle spielen. Die Studenten erwerben die Kompetenz zum Erkennen inverser Problemstellungen und ihrer Instabilität und zum Überwinden der spezifischen Probleme durch angepasste Techniken der Regularisierung mittels objektiver und subjektiver Apriori-Informationen im Rahmen mathematischer Handwerkszeuge.		
Remarks: Kann nicht gemeinsam mit MTH-2690 eingebracht werden		
Workload: Total: 240 h		
Conditions: Funktionalanalysis		Credit Requirements: Bestehen der Modulprüfung

Contact Hours: 6,00	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Inverse Probleme Language: German		
Examination Inverse Probleme portfolio exam, graded Test Frequency: not this semester		

Module MTH-2708: Advanced Discrete Probability <i>Fortgeschrittene Themen der diskreten Wahrscheinlichkeitstheorie</i>		8 ECTS/LP
Version 1.0.0 (since SoSe25) Person responsible for module: Prof. Dr. Markus Heydenreich		
Learning Outcomes / Competences: Studierende lernen in diesem Kurs aktive Forschungsgebiete der diskreten Wahrscheinlichkeitstheorie kennen. Sie kennen wesentliche Theorielinien und können den Beweis zentraler Resultate skizzieren. Sie sind in der Lage mit den erlernten Techniken eigene Beweise zu erarbeiten. Integrierter Erwerb von Schlüsselqualifikationen: Eigenständiges Arbeiten mit (englischsprachiger) wissenschaftlicher Literatur, wissenschaftliches Denken, vertiefte Kompetenzen in der selbständigen Bearbeitung von Problemstellungen		
Workload: Total: 240 h		
Conditions: Lineare Algebra I Analysis I Analysis II Stochastik I Stochastik II (kann parallel gehört werden)		Credit Requirements: Bestehen der Modulprüfung
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Fortgeschrittene Themen der diskreten Wahrscheinlichkeitstheorie Language: English / German Contact Hours: 6,00		
Contents: Im Kurs werden Studierende anhand ausgewählter Themen in aktuelle Forschungsthemen aus der diskreten Wahrscheinlichkeitstheorie eingeführt. Dabei werden sowohl grundlegende Beweistechniken erarbeitet also auch einige der neuesten Resultate präsentiert. Themen und Format variieren, im Sommersemester 2025 findet ein Lesekurs zur Mathematischen Statistischen Physik statt.		
Assigned Courses: Advanced Discrete Probability (Fortgeschrittene Themen der diskreten Wahrscheinlichkeitstheorie) (lecture + exercise) <i>*(in attendance) *</i>		
Examination Fortgeschrittene Themen der diskreten Wahrscheinlichkeitstheorie portfolio exam, Die genaue Prüfungsform wird in der jeweiligen Veranstaltung bekannt gegeben., graded Test Frequency: this semester		

Module MTH-2738: Homotopy Theory <i>Homotopietheorie</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Wolfgang Steimle		
Learning Outcomes / Competences: Die Studierenden lernen grundlegende Konzepte, Techniken und Resultate der modernen Homotopietheorie und wissen, wie man sie in verschiedenen Bereichen der Geometrie und Algebra anwenden kann.		
Workload: Total: 240 h		
Conditions: keine		
Frequency: irregular	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted:	
Parts of the Module Part of the Module: Modulteil: Homotopietheorie Language: German / English Contact Hours: 6,00		
Contents: Die moderne Homotopietheorie ist eine axiomatische Theorie, die auf so unterschiedliche Bereichen der Mathematik wie Topologie, algebraischer Geometrie, Operatortheorie und Darstellungstheorie gleichermaßen anwendbar ist, und in deren Zentrum der Begriff von unendlich-Kategorien steht. Die Vorlesung bietet einen Einstieg in die moderne Homotopietheorie aus praxisorientierter Sicht, d. h. im Vordergrund steht nicht der systematische Aufbau der Theorie, sondern ein möglichst schneller Weg zu den zentralen Konzepten. Im Vordergrund steht dabei das Erlernen der kategoriellen Sprache und Techniken und der Überblick über verschiedene Anwendungen in unterschiedlichen Bereichen der Mathematik.		
Examination Prüfung oral exam / length of examination: 45 minutes, graded Test Frequency: not this semester		

Module MTH-2758: High-Dimensional Probability with Applications to Data Science <i>Hochdimensionale Wahrscheinlichkeitstheorie mit Anwendungen in Data Science</i>		8 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Stefan Großkinsky Koutsimpela, Angelina, Dr.		
Contents: 1. Preliminaries on random variables 2. Concentration of sums of independent random variables 3. Random vectors in high dimensions 4. Random matrices 5. Concentration without independence 6. Quadratic forms, symmetrization and contraction 7. Random processes		
Learning Outcomes / Competences: Erlernen der wahrscheinlichkeitstheoretischen Grundlagen des Data Science. Studierende können Fragestellungen in Data Science mathematisch-präzise formulieren und rigorose Lösungen erarbeiten.		
Workload: Total: 240 h		
Conditions: Probability Theory (e.g. Stochastik I), Analysis I+II. Linear Algebra I+II		Credit Requirements: Bestehen der Modulprüfung
Frequency: every 4th semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]

Examination Lie-Gruppen und homogene Räume module exam, schriftliche Prüfung oder mündliche Prüfung oder Portfolioprüfung, graded Test Frequency: not this semester		

Module MTH-3308: Mathematical Physics <i>Mathematische Physik</i>		8 ECTS/LP
Version 1.0.0 (since SoSe25) Person responsible for module: Prof. Dr. Urs Frauenfelder		
Contents: In this course several topics of mathematical physics are discussed like the question about the quantization of a classical mechanical system and the connection between its geometry and dynamics.		
Remarks: Cannot be combined together with MTH-3300.		
Workload: Total: 240 h		
Conditions: none		Credit Requirements: Passing the module exam.
Frequency: irregular	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6,00	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Mathematische Physik Language: German / English Frequency: irregular Contact Hours: 6,00		
Examination Mathematische Physik oral exam / length of examination: 30 minutes, graded Test Frequency: not this semester		

Module MTH-4290: Selected Topics in Mathematical Data Science <i>Spezielle Kapitel der Mathematical Data Science</i>		3 ECTS/LP
Version 1.0.0 (since WS25/26) Person responsible for module: Prof. Dr. André Uschmajew		
Learning Outcomes / Competences: Die Studierenden vertiefen ihre Kenntnisse in speziell ausgewählten Kapiteln der Mathematical Data Science.		
Conditions: none		Credit Requirements: Bestehen der Modulprüfung
Frequency: irregular	Recommended Semester:	Minimal Duration of the Module: semester[s]
Contact Hours: 2,00	Repeat Exams Permitted: any	

Parts of the Module
Part of the Module: <i>Spezielle Kapitel der Mathematical Data Science</i> Language: German / English

Examination MTH-4290 Spezielle Kapitel der Mathematical Data Science oral exam / length of examination: 30 minutes, graded Test Frequency: only in the winter semester

Module INF-0042: Project Module Software Methodologies for Distributed Systems <i>Projektmodul Softwaremethodiken für verteilte Systeme</i>		10 ECTS/LP
Version 1.0.0 (since SoSe13) Person responsible for module: Prof. Dr. Bernhard Bauer		
Learning Outcomes / Competences: After participating in the project module, students understand problems of higher complexity in the field of software methodologies for distributed systems and have in-depth specialist knowledge and skills there. They are able to develop concepts, methods, procedures, techniques, and technologies of the mentioned field in research projects and are able to apply innovative approaches in solving problems. This enables them to link up with international research and make their scientific contribution to the field. In addition, students have the teamwork and communication skills, the ability to research literature and the scientific methodology to discuss problems in the area, define intermediate goals, and critically evaluate, classify, combine and present intermediate results and innovative ideas. Key qualifications: Ability to think logically, analytically, and conceptually; Independent work with literature; Understandable, confident, and convincing presentation of ideas, concepts, and results; Quality awareness; Communication skills; Skill of working in teams and understanding team processes; Principles of good scientific practice; Project management skills; Scientific methodology;		
Workload: Total: 300 h 15 h seminar (attendance) 285 h internship / practical course (self-study)		
Conditions: none		
Frequency: each semester	Recommended Semester: 1.	Minimal Duration of the Module: 1 semester[s]

Module INF-0080: Project Module Databases and Information Systems <i>Projektmodul Datenbanken und Informationssysteme</i>		10 ECTS/LP
Version 1.6.0 (since SoSe14) Person responsible for module: Prof. Dr. Peter Michael Fischer		
Learning Outcomes / Competences: After participating in the project module, students understand problems of higher complexity levels in the field of databases and information systems and have deeper professional knowledge and skills there. They are able to develop concepts, methods, procedures, techniques and technologies of the mentioned field in research projects and are able to apply innovative methods in solving problems. This enables them to connect to international research and make their own scientific contribution to the field. In addition, students have the teamwork and communication skills, the ability to research literature and the scientific methodology to discuss problems in the field, define intermediate goals, and critically evaluate, classify, combine and present intermediate results and innovative ideas. Key Skills: Skill in logical, analytical, and conceptual thinking; Independent work with English-language literature; Intelligible, confident, and persuasive presentation of ideas, concepts, and results; Quality awareness; Communication skills; Skill in working in teams and understanding team processes; Principles of good scientific practice; Project management skills; Scientific methodology.		
Workload: Total: 300 h 15 h seminar (attendance) 285 h internship / practical course (self-study)		
Conditions: Module Database Systems (INF-0073) - recommended Module Search Engines (INF-0077) - recommended Module Analysing Massive Data Sets (INF-0277) - recommended

Module INF-0374: Project Module Resource Aware Algorithmics <i>Projektmodul Resource Aware Algorithmics</i>		10 ECTS/LP
Version 1.0.0 (since WS20/21) Person responsible for module: Prof. Dr. Tobias Mömke		
Learning Outcomes / Competences: After attending this research module, the students are able to understand algorithmic problems and solutions of medium difficulty in the area of resource aware algorithmics. They have acquired a detailed understanding of up-to-date topics within the area and can actively participate in research projects. Furthermore, they understand some deep concepts, methods, tools and technologies and can apply the acquired knowledge in research projects. Besides the technical abilities, they train their team and communication skills, the ability to perform literature research and to discuss and present technical topics.		
Key Qualifications: Ability to perform analytical and logic thinking; self-sufficient work with scientific literature in English language; ability to present results and ideas in form of understandable and inspiring presentations; aim for high-quality results; communication skills; ability to work with a team and to understand team processes; respect for clean scientific practices		
Workload: Total: 300 h 285 h internship / practical course (self-study) 15 h seminar (attendance)		
Conditions: none		Credit Requirements: Bestehen der Modulprüfung
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Module INF-0436: Project Module Quantum Algorithms <i>Projektmodul Quantenalgorithmen</i>		10 ECTS/LP
Version 1.0.0 (since SoSe23) Person responsible for module: Prof. Dr. Jakob Siegfried Kottmann		
Learning Outcomes / Competences: After participating in the project module, students will understand highly complex problems in the field of quantum algorithms and will have in-depth specialist knowledge and skills in this area. They will be able to develop concepts, methods, procedures, techniques, and technologies in this field in research projects and will be able to apply innovative methods to solve problems. This enables them to connect with international research and make their own scientific contribution in this field. In addition, students will have the teamwork and communication skills, the ability to conduct literature research, and the scientific methodology to discuss problems in the field, define intermediate goals, and critically evaluate, classify, combine, and present interim results and innovative ideas.		
Workload: Total: 300 h 15 h seminar (attendance) 285 h internship / practical course (self-study)		
Conditions: none		Credit Requirements: Passing the exam

Module MTH-4310: Mathematics Project		10 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Marc Nieper-Wißkirchen		
Contents: Students can approach any professor in the mathematics department to get a project topic assigned to them. The precise content and task to complete depends on the assigned project topic and will be discussed individually with the professor.		
Learning Outcomes / Competences: After participating in the project module, students understand problems of higher complexity in the selected field of mathematics and have in-depth specialist knowledge and skills there. They are able to develop concepts, methods, procedures, techniques, and technologies of the mentioned field in research projects and are able to apply innovative approaches in solving problems. This enables them to link up with international research and make their scientific contribution to the field. In addition, students have the teamwork and communication skills, the ability to research literature and the scientific methodology to discuss problems in the area, define intermediate goals, and critically evaluate, classify, combine and present intermediate results and innovative ideas. Key qualifications: Ability to think logically, analytically, and conceptually; Independent work with literature; Understandable, confident, and convincing presentation of ideas, concepts, and results; Quality awareness; Communication skills; Skill of working in teams and understanding team processes; Principles of good scientific practice; Project management skills; Scientific methodology;

Module INF-0095: Seminar Multimedia Computing & Computer Vision (MA) <i>Seminar Multimedia Computing (MA)</i>		4 ECTS/LP
Version 1.0.0 (since SoSe14) Person responsible for module: Prof. Dr. Rainer Lienhart		
Learning Outcomes / Competences: After attending the seminar, the students can independently work out and analyse advanced problems, concepts, methods, procedures, techniques, and technologies from the field of multimedia computing and computer vision (e.g. image and video processing, machine learning, and image and video search) and evaluate them in relation to the individual seminar topic. Participants possess scientific methodology, communication skills, and the ability to present a special topic clearly and comprehensibly in speech and writing and to discuss and evaluate scientifically challenging topics from the named field critically and argumentatively. Furthermore, they learn to recognise logical structures of thinking and argumentation and use them in a goal-oriented manner. The participants can formulate clearly and comprehensibly and present subject content freely. They understand how to structure a talk that is clear and easy to follow. Additionally, the students know how to focus on essential messages and convey them in a comprehensible way, even with complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to confidently deal with common presentation media and use them interactively. They manage to gear a talk to a specific target group, apply various moderation techniques, and keep their audience engaged even over a longer period. Key qualifications: Presentation techniques; literature research; principles of good scientific practice; evaluating solution approaches, procedures, techniques, and technologies from different points of view.		
Workload: Total: 120 h 90 h preparation of written term papers (self-study) 30 h seminar (attendance)		
Conditions: none		
Frequency: each semester außer im SoSe 2026	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Module INF-0227: Seminar Database Systems Master <i>Seminar Datenbanksysteme für Master</i>		4 ECTS/LP
Version 1.0.0 (since SoSe16) Person responsible for module: Prof. Dr. Peter Michael Fischer		
Learning Outcomes / Competences: After attending the seminar, students are able to independently develop, analyze and evaluate advanced problems, concepts, methods, procedures, techniques and technologies in the field of database systems in relation to the individual seminar topic from the mentioned field. They have the scientific methodology, communication skills and ability to use appropriate media to present a specific topic in a clear and understandable manner, both verbally and in writing, and to critically and argumentatively discuss and evaluate scientifically challenging topics from the named field. They will also be able to recognize the logical structures of reasoning and argumentation and use them in a goal-oriented manner. The participants can formulate clearly and comprehensibly and present specialist content freely. They understand how to structure a lecture in a clear and comprehensible way and how to focus the lecture on essential messages and convey them in a comprehensible way, even in the case of complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to present themselves and how to deal confidently with common presentation media and to use them interactively. They manage to gear a lecture to a specific target group and to motivate the listener even during longer lecture durations and to apply various moderation techniques. Key qualifications: Literature research; Independent work with English-language specialist literature; Analytical-methodical competence; Scientific methodology; Principles of good scientific practice; Skill in the comprehensible, confident and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts and results and for their documentation; Skill in logical, abstract, analytical and conceptual thinking and formal argumentation; Quality awareness, meticulousness; Communication skills; Time management; Evaluation of approaches, procedures, techniques and technologies from different points of view.

Version 1.0.0 (since SoSe20) Person responsible for module: Prof. Dr. Bernhard Bauer		
Learning Outcomes / Competences: After attending the seminar, students can independently develop, analyze and evaluate advanced problems, concepts, methods, procedures, techniques, and technologies in software engineering for distributed systems about the particular seminar topic from the named field. They have the scientific methodology, communication skills, and ability to use appropriate media to present a specific case clearly and comprehensibly in speech and writing and to discuss and evaluate scientifically challenging topics from the named field critically and argumentatively. Furthermore, they can recognize the logical structures of thinking and argumentation and use them goal-oriented. The participants can formulate clearly and comprehensibly and present subject content freely. They understand how to structure a lecture clearly and understandably, focus the study on essential messages, and understandably convey them, even with complex content. They skillfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to present themselves and confidently deal with joint presentation media and use them interactively. They manage to gear a lecture to a specific target group, motivate the listener even during longer lecture durations, and apply various moderation techniques. Key qualifications: Literature research; independent work with English-language specialist literature; analytical-methodical competence; scientific methodology; principles of good scientific practice; skills in the understandable, confident, and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts, and results and in documenting them; skills in logical, abstract, analytical and conceptual thinking and formal argumentation; quality awareness, meticulousness; communication skills; time management; evaluation of approaches, procedures, techniques, and technologies from different points of view. Module INF-0439: Seminar Quantum Algorithms (Master) <i>Seminar Quantum Algorithms (Master)</i>		4 ECTS/LP
Version 1.0.0 (since SoSe23) Person responsible for module: Prof. Dr. Jakob Siegfried Kottmann		
Contents: The seminar deepens the content covered in the lecture "Quantum Algorithms." Attending the lecture at the same time is recommended. Specific topics are based on current research. Application examples and topics covered in the lecture are explored in greater depth, and new topics are introduced. The seminar is suitable as preparation for a thesis in the field of quantum algorithms.		
Learning Outcomes / Competences: After attending the seminar, students will be able to independently develop, analyze, and evaluate advanced problems, concepts, methods, procedures, techniques, and technologies in the field of quantum algorithms in relation to the individual seminar topic from the aforementioned field. They will have the scientific methodology, communication skills, and ability to use appropriate media to present a specific topic clearly and comprehensibly in both written and spoken form and to critically discuss and evaluate scientifically demanding topics from the specified field. In addition, they will be able to recognize the logical structures of thinking and argumentation and use them in a goal-oriented manner. Participants can formulate clearly and comprehensibly and present specialist content freely. They understand how to structure a presentation clearly and comprehensibly and, even with complex content, focus the presentation on key messages and convey these in an understandable way. They skillfully apply chains of argumentation and solution strategies in the event of disruptions. Students know how to present themselves confidently and use common presentation media interactively. They are able to tailor a presentation to a specific target group, motivate the audience even during longer presentations, and apply various moderation techniques.

Learning Outcomes / Competences: After attending the seminar, students are able to independently work out, analyze and evaluate advanced problems, concepts, methods, procedures, techniques and technologies in the field of "Generative Artificial Intelligence" in relation to the individual seminar topic from the mentioned field. They have the scientific methodology, communication skills and ability to use appropriate media to present a specific topic clearly and comprehensibly, both verbally and in writing, and to discuss and evaluate scientifically challenging topics from the named field critically and argumentatively. They will also be able to recognize the logical structures of reasoning and argumentation and use them in a goal-oriented manner. The participants can formulate clearly and comprehensibly and present specialist content freely. They understand how to structure a lecture in a clear and comprehensible way and how to focus the lecture on essential messages and convey them in a comprehensible way, even in the case of complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to present themselves and how to deal confidently with common presentation media and to use them interactively. They manage to gear a lecture to a specific target group and to motivate the listener even during longer lecture durations and to apply various moderation techniques. Key qualifications: Literature research; Independent work with English-language specialist literature; Analytical-methodical competence; Scientific methodology; Principles of good scientific practice; Skill in the comprehensible, confident and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts and results and for their documentation; Skill in logical, abstract, analytical and conceptual thinking and formal argumentation; Quality awareness, meticulousness; Communication skills; Time management.		
Workload: Total: 120 h 30 h seminar (attendance) 90 h preparation of written term papers (self-study)		
Conditions: none		
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Module INF-0468: Seminar Natural Language Understanding (Master) <i>Seminar Natural Language Understanding (Master)</i>		4 ECTS/LP
Version 1.0.0 (since WS23/24) Person responsible for module: Prof. Dr. Annemarie Friedrich		
Contents: The seminar on natural language understanding delves into the fascinating realm of artificial intelligence and linguistics, exploring how machines can comprehend and process human language. Computational semantics is a subfield of natural language processing (NLP) and computational linguistics that focuses on the development of algorithms, models, and systems for understanding and representing the meaning of natural language text in a way that computers can process and manipulate. Exemplary topics discussed in this seminar include: representing word, sentence, or text meaning, semantic role labeling, semantic parsing, discourse and pragmatics. The number of participants is limited.		
Learning Outcomes / Competences: After attending the seminar, students are able to independently develop, analyze and evaluate advanced problems, concepts, methods, procedures, techniques and technologies in the field of embedded systems in relation to the individual seminar topic from the named field. They have the scientific methodology, communication skills and ability to use appropriate media to present a specific topic in a clear and comprehensible manner, both verbally and in writing, and to discuss and evaluate scientifically challenging topics from the aforementioned field in a critical and argumentative manner. They will also be able to recognize the logical structures of reasoning and argumentation and use them in a goal-oriented manner. The participants can formulate clearly and comprehensibly and present specialist content freely. They understand how to structure a scientific presentation in a clear and comprehensible way and how to focus the presentation on essential messages and convey them in a comprehensible way, even in the case of complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to present themselves and how to deal confidently with common presentation media and to use them interactively. They manage to gear a presentation to a specific target group and to motivate the listener even during longer presentation durations and to apply various moderation techniques. Key qualifications: Literature research; Independent work with English-language specialist literature; Analytical-methodical competence; Scientific methodology; Principles of good scientific practice; Skill in the comprehensible, confident and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts and results and for their documentation; Skill in logical, abstract, analytical and conceptual thinking and formal argumentation; Quality awareness, meticulousness; Communication skills; Time management; Evaluation of approaches, procedures, techniques and technologies from different points of view.		
Remarks: The course will be taught by Dr. Jakob Prange, who will join the department in October.		
Workload: Total: 120 h 30 h seminar (attendance) 90 h preparation of written term papers (self-study)		
Conditions: none		Credit Requirements: Presentation and term paper
Frequency: irregular	Recommended Semester: 1.	Minimal Duration of the Module: 1 semester[s]

Module INF-0479: Seminar Current Topics in Embodied Artificial Intelligence and Computer Vision <i>Seminar Current Topics in Embodied Artificial Intelligence and Computer Vision</i>		4 ECTS/LP
Version 1.0.0 (since WS23/24) Person responsible for module: Prof. Dr. Jörg-Dieter Stückler		
Learning Outcomes / Competences: After attending the seminar, the students are able to work out, analyze and evaluate further problems, concepts, methods, techniques and technologies in the field of embodied artificial intelligence and computer vision, methods, procedures, techniques and technologies in the field of Embodied Artificial Intelligence and Computer Vision independently, analyze and evaluate them in relation to the individual seminar topic from the mentioned field. They possess the scientific methodology, communication skills and ability to use appropriate media to present a specific topic in a clear and comprehensible manner, both verbally and in writing, and critically and argumentatively discuss and evaluate scientifically challenging topics from the named field. In addition, they can recognize the logical structures of thought and argumentation and use them in a goal-oriented manner. Participants are able to formulate clearly and comprehensibly and present scientific content freely. They understand how to structure a presentation clearly and comprehensibly and, even with complex content, how to focus the presentation on essential messages and convey them in a comprehensible manner. The students understand how to present themselves and how to deal confidently with common presentation media and to use them interactively. They manage to gear a presentation to a specific target group, to motivate the listener and to apply various moderation techniques. Key qualifications: Literature research; independent work with English-language scientific literature; Analytical-methodical competence; Scientific methodology; Principles of good scientific practice; Ability to present comprehensible, confident and convincing (written and oral); presentation of (practical or theoretical) ideas, concepts, and results and to document them; ability to logical, abstract, analytical and conceptual thinking and formal reasoning; quality consciousness, meticulousness; communication skills; time management; evaluation of approaches, procedures, techniques and technologies from different points of view.		
Workload: Total: 120 h 30 h seminar (attendance) 90 h preparation of written term papers (self-study)		
Conditions: none		Credit Requirements: Passing the module exam

Module INF-3019: Seminar Data Engineering Master <i>Seminar Data Engineering Master</i>		4 ECTS/LP
Version 1.0.0 (since WS24/25) Person responsible for module: Prof. Dr. Fabian Panse		
Learning Outcomes / Competences: After attending the seminar, students are able to independently develop, analyze and evaluate advanced problems, concepts, methods, procedures, techniques and technologies in the field of database systems in relation to the individual seminar topic from the mentioned field. They have the scientific methodology, communication skills and ability to use appropriate media to present a specific topic in a clear and understandable manner, both verbally and in writing, and to critically and argumentatively discuss and evaluate scientifically challenging topics from the named field. They will also be able to recognize the logical structures of reasoning and argumentation and use them in a goal-oriented manner. The participants can formulate clearly and comprehensibly and present specialist content freely. They understand how to structure a lecture in a clear and comprehensible way and how to focus the lecture on essential messages and convey them in a comprehensible way, even in the case of complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to present themselves and how to deal confidently with common presentation media and to use them interactively. They manage to gear a lecture to a specific target group and to motivate the listener even during longer lecture durations and to apply various moderation techniques. Key qualifications: Literature research; Independent work with English-language specialist literature; Analytical-methodical competence; Scientific methodology; Principles of good scientific practice; Skill in the comprehensible, confident and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts and results and for their documentation; Skill in logical, abstract, analytical and conceptual thinking and formal argumentation; Quality awareness, meticulousness; Communication skills; Time management; Evaluation of approaches, procedures, techniques and technologies from different points of view.

Module INF-3023: Seminar Software Engineering for Artificial Intelligence Systems Master <i>Seminar Software Engineering for Artificial Intelligence Systems Master</i>		4 ECTS/LP
Version 1.0.0 (since WS24/25) Person responsible for module: Prof. Dr. Bernhard Bauer		
Learning Outcomes / Competences: After attending the seminar, the students are able to independently work out, analyze and evaluate advanced problems, concepts, methods, procedures, techniques, and technologies in the field of Software Engineering for Artificial Intelligence Systems concerning the particular seminar topic from the named field. They have the scientific methodology, communication skills, and ability to use appropriate media to present a specific case clearly and comprehensibly in speech and writing and to discuss and evaluate scientifically challenging topics from the named field critically and argumentatively. Furthermore, they can recognize the logical structures of thinking and argumentation and use them goal-oriented. The participants can formulate clearly and comprehensibly and present subject content freely. They understand how to structure a lecture clearly and understandably, focus the study on important messages, and convey them in a comprehensible way, even with complex content. They skillfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to present themselves and confidently deal with joint presentation media and use them interactively. They manage to gear a lecture to a specific target group, motivate the listener even during longer lecture durations, and apply various moderation techniques. Key qualifications: Literature research; independent work with English-language specialist literature; analytical-methodical competence; scientific methodology; principles of good scientific practice; skills in the understandable, confident, and convincing (written and oral) presentation of (practical or theoretical) ideas, concepts, and results and in documenting them; skills in logical, abstract, analytical and conceptual thinking and formal argumentation; quality awareness, meticulousness; communication skills; time management; evaluation of approaches, procedures, techniques, and technologies from different points of view. Module INF-0407: Seminar Digital Ethics (Master) <i>Seminar Digitale Ethik (Master)</i>		4 ECTS/LP
Version 1.0.0 (since WS21/22) Person responsible for module: Prof. Dr. Robert Lorenz		
Learning Outcomes / Competences: After attending the seminar, the students can independently work out and analyse advanced problems, concepts, methods, procedures, techniques, and technologies from the field of digital ethics and evaluate them in relation to the individual seminar topic. Participants possess scientific methodology, communication skills, and the ability to present a special topic clearly and comprehensibly in speech and writing and to discuss and evaluate scientifically challenging topics from the named field critically and argumentatively. Furthermore, they learn to recognise logical structures of thinking and argumentation and use them in a goal-oriented manner. The participants can formulate clearly and comprehensibly and present subject content freely. They understand how to structure a talk that is clear and easy to follow. Additionally, the students know how to focus on essential messages and convey them in a comprehensible way, even with complex content. They skilfully apply chains of argumentation and solution strategies in the event of disruptions. The students understand how to confidently deal with common presentation media and use them interactively. They manage to gear a talk to a specific target group, apply various moderation techniques, and keep their audience engaged even over a longer period. Key qualifications: Presentation techniques; literature research; principles of good scientific practice; evaluating solution approaches, procedures, techniques, and technologies from different points of view.		
Workload: Total: 120 h 30 h seminar (attendance) 90 h preparation of presentations (self-study)

Module KTH-9000: Ethics & Computer Science <i>Ethics & Computer Science</i>		4 ECTS/LP
Version 1.0.0 (since WS25/26) Person responsible for module: Prof. Dr. Kerstin Schlögl-Flierl		
Learning Outcomes / Competences: After completing the module, students will be able to identify, analyze, and evaluate ethical issues that arise in the development and application of computer science and artificial intelligence (AI). They gain knowledge of central ethical theories of AI, with special focus on the embedded ethics approach and both individual- and social-ethical perspectives. A core outcome of the module is the development of fundamental ethical competence. Students learn to recognize ethically relevant aspects of technical work, to assess them critically, and to integrate ethical reflection into research and practice. They are able to apply ethical frameworks, evaluate alternative approaches, and propose well-reasoned solutions. Key Learning Objectives: • Fundamental ethical theories should be recognized. • Independent ethical judgment should be encouraged. • The field of AI ethics should be understood in overview. • The specific problems of data ethics should be understood. Key Qualifications: Fundamental ethical competence in the context of computer science; Literature research and independent engagement with English-language academic sources; Analytical-methodical competence; Ability to apply ethical concepts, theories, and methods; principles of good scientific practice; Logical, abstract, and conceptual thinking; Structured ethical argumentation; Communication skills; Oral and written presentation of ideas, arguments, and results in a clear and convincing manner. Basic ethical reflection skills should be developed. The ability to identify problems for the other modules should be developed.		
Workload: Total: 120 h 30 h (attendance) 30 h studying of course content using provided materials (self-study) 60 h studying of course content using literature (self-study)		
Conditions: none		Credit Requirements: Passing the module exam
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 2,00	Repeat Exams Permitted: according to the examination regulations of the study program

Contents:

The ethical debate surrounding AI currently revolves around various principles and guidelines from policy papers. The topics of bias and explainability are particularly prominent in these ethical debates. However, the focus should also be broadened to include environmental and climate ethics issues. The issue of human rights violations in various fields is also a pressing one and can only be addressed repeatedly in relation to new applications. The principles of what exactly constitutes responsible use of these technologies need to be clarified.

Module MTH-2021: Master Thesis with Colloquium <i>Master Thesis with Colloquium</i>		30 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr. Marc Nieper-Wißkirchen		
Learning Outcomes / Competences: Students are familiar with the current state of research in a specialised field and the relevant literature. They are able to apply modern mathematical methods to the in-depth study of a current research question. They have the competence to independently work on a mathematical problem within a given time frame using scientific methods and to present the scientific basis of the problem and their results in writing. Integrated acquisition of key qualifications: ability to work in a team, perseverance, ability to document one's own scientific results in writing, critical reflection on one's own results in an international scientific context, principles of good scientific practice.		
Workload: Total: 900 h		
Conditions: none		
Frequency: each semester	Recommended Semester: 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 0,00	Repeat Exams Permitted: once	
Parts of the Module		
Part of the Module: Master Thesis with Colloquium Mode of Instruction: colloquium Language: German / English Frequency: each semester Contact Hours: 0,00 ECTS Credits: 30.0		
Contents: Appropriately chosen topic Prerequisites: Basic knowledge in most mathematical subdisciplines, in-depth knowledge in a specialised field.		
Examination Master Thesis with Colloquium Master's thesis / length of examination: 6 months, graded
