
Module Catalogue

Master Program Materials Science (PO 2016)

Faculty of Mathematics, Natural Sciences, and Materials Engineering

Examination regulations as of 11.05.2016

You can see the other use cases of the modules in Digicampus.

Index by Module Groups

1) 1a Basics of Materials Science I

Version 2 (since WS16/17)

PHM-0144: Materials Physics (6 ECTS/LP, Wahlpflicht).....	8
PHM-0110: Materials Chemistry (6 ECTS/LP, Wahlpflicht).....	10

2) 1b Basics of Materials Science II

Version 1 (since SoSe15)

PHM-0117: Surfaces and Interfaces (6 ECTS/LP, Wahlpflicht).....	12
---	----

3) 2 Methods in Materials Science

Version 9 (since SoSe23)

PHM-0287: Method Course: Spectroscopy of Organic Semiconductors (8 ECTS/LP, Wahlpflicht) *	14
PHM-0297: Method Course: Methods in Bioanalytics (8 ECTS/LP, Wahlpflicht) *	16
PHM-0298: Method course: From macroscopic to microscopic ferroic properties (8 ECTS/LP, Wahlpflicht).....	18
PHM-0363: Method Course: Applying Theoretical Concepts from Non-equilibrium Statistical Physics (8 ECTS/LP).....	20
PHM-0147: Method Course: Electron Microscopy (8 ECTS/LP, Wahlpflicht) *	22
PHM-0146: Method Course: Electronics for Physicists and Materials Scientists (8 ECTS/LP, Wahlpflicht) *	25
PHM-0172: Method Course: Functional Silicate-analogous Materials (8 ECTS/LP, Wahlpflicht).....	27
PHM-0148: Method Course: Optical Properties of Solids (8 ECTS/LP, Wahlpflicht).....	29
PHM-0149: Method Course: Methods in Biophysics (8 ECTS/LP, Wahlpflicht).....	31
PHM-0153: Method Course: Magnetic and Superconducting Materials (8 ECTS/LP, Wahlpflicht) *	33
PHM-0154: Method Course: Modern Solid State NMR Spectroscopy (8 ECTS/LP, Wahlpflicht).....	35
PHM-0206: Method Course: Infrared Microspectroscopy under Pressure (8 ECTS/LP, Wahlpflicht) *	37
PHM-0216: Method Course: Thermal Analysis (8 ECTS/LP, Wahlpflicht).....	39
PHM-0224: Method Course: Theoretical Concepts and Simulation (8 ECTS/LP, Wahlpflicht) *	41
PHM-0223: Method Course: Tools for Scientific Computing (8 ECTS/LP, Wahlpflicht) *	43
PHM-0258: Method course: Charge doping effects in semiconductors (8 ECTS/LP, Wahlpflicht) *	46

* = At least one course for this module is offered in the current semester

PHM-0285: Method Course: Computational Biophysics (8 ECTS/LP, Wahlpflicht) *	48
--	----

4) 3a Conducting and Presenting Scientific Work - Seminar

Version 1 (since WS16/17)

PHM-0158: Introduction to Materials (= Seminar) (4 ECTS/LP, Pflicht) *	50
--	----

5) 3b Conducting and Presenting Scientific Work - Laboratory Project

Version 1 (since WS16/17)

PHM-0159: Laboratory Project (10 ECTS/LP, Pflicht)	51
--	----

6) 4 Materials Science - Major Topic

Version 10 (since SoSe24)

a) Physics of Materials

Version 10 (since SoSe24)

PHM-0057: Physics of Thin Films (6 ECTS/LP, Wahlpflicht)	52
PHM-0058: Organic Semiconductors (6 ECTS/LP)	54
PHM-0060: Low Temperature Physics (6 ECTS/LP)	56
PHM-0066: Superconductivity (6 ECTS/LP)	58
PHM-0252: Optical Excitations in Materials (6 ECTS/LP, Wahlpflicht) *	60
PHM-0253: Dielectric Materials (6 ECTS/LP, Wahlpflicht) *	62
PHM-0051: Biophysics and Biomaterials (6 ECTS/LP, Wahlpflicht) *	64
PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht) *	67
PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP, Wahlpflicht) *	69
PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht) *	71
PHM-0203: Physics of Cells (6 ECTS/LP, Wahlpflicht)	73

b) Chemistry of Materials

Version 10 (since SoSe24)

MRM-0155: Resource and Waste Mineralogy (6 ECTS/LP, Wahlpflicht) *	75
PHM-0270: Computational Chemistry and Material Modeling (6 ECTS/LP) *	77
PHM-0276: Modern Diffraction Techniques in Materials Science (6 ECTS/LP)	79
PHM-0301: Supramolecules and molecular design in materials science (6 ECTS/LP, Wahlpflicht) *	81
PHM-0361: Catalysis (6 ECTS/LP)	83
PHM-0218: Novel Methods in Solid State NMR Spectroscopy (6 ECTS/LP, Wahlpflicht)	85

* = At least one course for this module is offered in the current semester

PHM-0167: Oxidation and Corrosion (6 ECTS/LP, Wahlpflicht).....	86
PHM-0264: Functional and Smart Macromolecular Materials (6 ECTS/LP, Wahlpflicht).....	88

c) Engineering of Materials

Version 10 (since SoSe24)

MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) (6 ECTS/LP).....	90
PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht).....	91
MRM-0128: Bioinspired Composites (6 ECTS/LP, Wahlpflicht) *	93
MRM-0156: Structural optimization (6 ECTS/LP, Wahlpflicht) *	95
PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht).....	97
PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht) *	99
PHM-0196: Surfaces and Interfaces II: Joining processes (6 ECTS/LP, Wahlpflicht).....	101
MRM-0136: Mechanical Characterization of Materials (6 ECTS/LP, Wahlpflicht).....	103
MRM-0112: Finite element modeling of multiphysics phenomena (6 ECTS/LP, Wahlpflicht) *	105
MRM-0126: Ceramic Matrix Composites (6 ECTS/LP).....	107
MRM-0089: Recycling of composites (6 ECTS/LP, Wahlpflicht) *	109

7) 5 Materials Science Elective Topic (PO16)

Version 13 (since SoSe24)

MRM-0126: Ceramic Matrix Composites (6 ECTS/LP, Wahlpflicht).....	111
MRM-0142: Complex 3D Structures and Components from 2D Materials (6 ECTS/LP, Wahlpflicht).....	113
MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) (6 ECTS/LP).....	115
PHM-0252: Optical Excitations in Materials (6 ECTS/LP, Wahlpflicht) *	116
PHM-0253: Dielectric Materials (6 ECTS/LP, Wahlpflicht) *	118
PHM-0270: Computational Chemistry and Material Modeling (6 ECTS/LP) *	120
PHM-0275: Modern Solid State NMR Methods in Materials Science (6 ECTS/LP).....	122
PHM-0276: Modern Diffraction Techniques in Materials Science (6 ECTS/LP).....	124
PHM-0297: Method Course: Methods in Bioanalytics (8 ECTS/LP, Wahlpflicht) *	126
PHM-0298: Method course: From macroscopic to microscopic ferroic properties (8 ECTS/LP, Wahlpflicht).....	128
PHM-0301: Supramolecules and molecular design in materials science (6 ECTS/LP) *	130

* = At least one course for this module is offered in the current semester

Table of Contents

PHM-0174: Theoretical Concepts and Simulation (6 ECTS/LP, Wahlpflicht).....	132
PHM-0058: Organic Semiconductors (6 ECTS/LP, Wahlpflicht).....	134
PHM-0066: Superconductivity (6 ECTS/LP, Wahlpflicht).....	136
PHM-0060: Low Temperature Physics (6 ECTS/LP, Wahlpflicht).....	138
PHM-0068: Spintronics (6 ECTS/LP, Wahlpflicht).....	140
PHM-0057: Physics of Thin Films (6 ECTS/LP, Wahlpflicht).....	142
PHM-0056: Ion-Solid Interaction (6 ECTS/LP, Wahlpflicht).....	144
PHM-0069: Applied Magnetic Materials and Methods (6 ECTS/LP, Wahlpflicht).....	146
PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (6 ECTS/LP, Wahlpflicht) *	148
PHM-0051: Biophysics and Biomaterials (6 ECTS/LP, Wahlpflicht) *	150
PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht) *	153
PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP, Wahlpflicht) *	155
PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht) *	157
PHM-0218: Novel Methods in Solid State NMR Spectroscopy (6 ECTS/LP, Wahlpflicht).....	159
PHM-0167: Oxidation and Corrosion (6 ECTS/LP, Wahlpflicht).....	160
PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht).....	162
PHM-0165: Introduction to Mechanical Engineering (6 ECTS/LP, Wahlpflicht).....	164
PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht) *	165
PHM-0196: Surfaces and Interfaces II: Joining processes (6 ECTS/LP, Wahlpflicht).....	167
PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht).....	169
PHM-0203: Physics of Cells (6 ECTS/LP, Wahlpflicht).....	171
PHM-0117: Surfaces and Interfaces (6 ECTS/LP, Wahlpflicht).....	173
PHM-0146: Method Course: Electronics for Physicists and Materials Scientists (8 ECTS/LP, Wahlpflicht) *	175
PHM-0148: Method Course: Optical Properties of Solids (8 ECTS/LP, Wahlpflicht).....	177
PHM-0147: Method Course: Electron Microscopy (8 ECTS/LP, Wahlpflicht) *	179
PHM-0149: Method Course: Methods in Biophysics (8 ECTS/LP, Wahlpflicht).....	182
PHM-0153: Method Course: Magnetic and Superconducting Materials (8 ECTS/LP, Wahlpflicht) *	184
PHM-0154: Method Course: Modern Solid State NMR Spectroscopy (8 ECTS/LP, Wahlpflicht).....	186

* = At least one course for this module is offered in the current semester

Table of Contents

PHM-0206: Method Course: Infrared Microspectroscopy under Pressure (8 ECTS/LP, Wahlpflicht) *	188
PHM-0216: Method Course: Thermal Analysis (8 ECTS/LP, Wahlpflicht)	190
PHM-0193: Plasma Material Interaction (6 ECTS/LP, Wahlpflicht) *	192
PHM-0224: Method Course: Theoretical Concepts and Simulation (8 ECTS/LP, Wahlpflicht) *	194
PHM-0225: Analog Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht)	196
PHM-0226: Digital Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht) *	197
PHM-0228: Symmetry concepts and their applications in solid state physics and materials science (6 ECTS/LP, Wahlpflicht)	198
PHM-0223: Method Course: Tools for Scientific Computing (8 ECTS/LP, Wahlpflicht) *	200
PHM-0285: Method Course: Computational Biophysics (8 ECTS/LP, Wahlpflicht) *	203
MRM-0128: Bioinspired Composites (6 ECTS/LP, Wahlpflicht) *	205
MRM-0112: Finite element modeling of multiphysics phenomena (6 ECTS/LP, Wahlpflicht) *	207
MRM-0136: Mechanical Characterization of Materials (6 ECTS/LP, Wahlpflicht)	209
PHM-0264: Functional and Smart Macromolecular Materials (6 ECTS/LP, Wahlpflicht)	211
PHM-0267: Fundamentals of Materials for Energy (6 ECTS/LP, Wahlpflicht)	213

8) 6 Finals

Version 1 (since SoSe15)

PHM-0169: Masterthesis (26 ECTS/LP, Pflicht)	215
PHM-0170: Colloquium (4 ECTS/LP, Pflicht) *	216

9) 7 Functional Materials (International) – zweites Studienjahr Ausland

Version 1 (since WS16/17)

PHM-0208: Functional Materials (International) – second year (Institut National Polytechnique de Grenoble) (58 ECTS/LP)	217
PHM-0211: Functional Materials (International) – second year (Université Bordeaux I) (58 ECTS/LP)	218
PHM-0212: Functional Materials (International) – second year (Université Catholique de Louvain) (58 ECTS/LP)	219
PHM-0213: Functional Materials (International) – second year (Université de Liège) (58 ECTS/LP)	220
PHM-0214: Functional Materials (International) – second year (Universidade de Aveiro) (58 ECTS/LP)	221

10) 8 Functional Materials (International) – erstes Studienjahr Ausland

Version 1 (since WS16/17)

* = At least one course for this module is offered in the current semester

Table of Contents

PHM-0209: Functional Materials (International) – first year (Institut National Polytechnique de
Grenoble) (62 ECTS/LP).....222

* = At least one course for this module is offered in the current semester

Module PHM-0144: Materials Physics <i>Materials Physics</i>		6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Helmut Karl		
Contents: <ul style="list-style-type: none"> • Electrons in solids • Phonons • Properties of metals, semiconductors and insulators • Application in optical, electronic, and optoelectronic devices • Dielectric solids, optical properties 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students know the basic terms and concepts of solid state physics like the free electron gas, electronic band structure, charge carrier statistics, phonons, doping and optical properties, • are capable to apply derived approximations as the effective mass or the electron-hole concept to describe basic characteristics of semiconductor materials, • have the competence to apply these concepts for the description of electric, electro-optic and thermal properties of solids and to describe their functionalities, • understand size effects on material physical properties. • Integrated acquirement of soft skills: Working with specialist literature, literature search and interdisciplinary thinking. 		
Remarks: compulsory module		
Workload: Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
Conditions: basic knowledge of solid state physics		
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Materials Physics Mode of Instruction: lecture Language: English Contact Hours: 3
Learning Outcome: see module description

Contents:

- Electrons in solids: Free electron gas, band structure, effective mass
- Lattice dynamics: Phonons, phonon dispersion, acoustic and optical phonons
- Properties of metals: Electrical conductivity, Fermi surfaces, thermal properties
- Properties of semiconductors: Pure, intrinsic semiconductors, equilibrium conditions, doping
- Properties of dielectric materials: Propagation of electromagnetic waves, frequency dependent optical properties, polarization effects.
- Application in devices: Heterostructures, Schottky contact, pn-junction, solar cell, light emission and technological aspects

Literature:

- Hummel R. E. : Electronic Properties of Materials Springer 2001 (UP1000 H925)
- Burns G.: Solid State Physics Academic Press 1990 (UP1000 B967)
- Ashcroft N. W. , Mermin N.D. : Solid State Physics (UP1000 A 824)
- Kittel C. : Introduction to Solid State Physics (UP1000 K 62)

Part of the Module: Materials Physics (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Learning Outcome:

see module description

Examination**Materials Physics**

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Materials Physics

Module PHM-0110: Materials Chemistry <i>Materials Chemistry</i>		6 ECTS/LP
Version 1.2.0 (since WS09/10) Person responsible for module: Prof. Dr. Henning Höppe		
Contents: <ul style="list-style-type: none"> • Revision of basic chemical concepts • Solid state chemical aspects of selected materials, such as <ul style="list-style-type: none"> ◦ Thermoelectrics ◦ Battery electrode materials, ionic conductors ◦ Hydrogen storage materials ◦ Data storage materials ◦ Phosphors and pigments ◦ Heterogeneous catalysis ◦ nanoscale materials 		
Learning Outcomes / Competences: The students will <ul style="list-style-type: none"> • be able to apply basic chemical concepts on materials science problems, • broaden their ability to derive structure-property relations of materials combining their extended knowledge about symmetry-related properties, chemical bonding in solids and chemical properties of selected compound classes, • be able to assess synthetic approaches towards relevant materials, • acquire skills to perform literature research using online data bases. 		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: The lecture course is based on the Bachelor in Materials Science courses Chemie I and Chemie III (solid state chemistry).		
Frequency:	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Materials Chemistry Mode of Instruction: lecture Language: English Contact Hours: 3		
Learning Outcome: see description of module		
Contents: see description of module		

Literature:

- A. R. West, Solid State Chemistry, John Wiley, Chichester.
- U. Müller, Inorganic Structural Chemistry, Wiley-VCH.
- R. Dronskowski, Computational Chemistry of Solid State Materials, Wiley VCH.
- Textbooks on Basics of Inorganic Chemistry such as J. E. Huheey, E. Keiter, R. Keiter, Anorganische Chemie, de Gruyter, or equivalents.
- Moreover, selected reviews and journal articles will be cited on the slides.

Part of the Module: Materials Chemistry (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Learning Outcome:

see description of module

Contents:

see description of module

Literature:

see associated lecture

Examination

Materials Chemistry

written exam / length of examination: 90 minutes, graded

Test Frequency:

only in the winter semester

Examination Prerequisites:

Materials Chemistry

Description:

ab dem WiSe 2023/4 wird nur noch die Modulprüfung angeboten, jedoch keine Vorlesung mehr

from winter term 2023/4 on only the exam will be conducted, but no lecture anymore

Module PHM-0117: Surfaces and Interfaces <i>Surfaces and Interfaces</i>		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Manfred Albrecht		
Contents: Introduction <ul style="list-style-type: none"> The importance of surfaces and interfaces Some basic facts from solid state physics <ul style="list-style-type: none"> Crystal lattice and reciprocal lattice Electronic structure of solids Lattice dynamics Physics at surfaces and interfaces <ul style="list-style-type: none"> Structure of ideal and real surfaces Relaxation and reconstruction Transport (diffusion, electronic) on interfaces Thermodynamics of interfaces Electronic structure of surfaces Chemical reactions on solid state surfaces (catalysis) Interface dominated materials (nano scale materials) Methods to study chemical composition and electronic structure, application examples <ul style="list-style-type: none"> Scanning electron microscopy Scanning tunneling and scanning force microscopy Auger – electron – spectroscopy Photo electron spectroscopy 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> have knowledge of the structure, the electronical properties, the thermodynamics, and the chemical reactions on surfaces and interfaces, acquire the skill to solve problems of fundamental research and applied sciences in the field of surface and interface physics, have the competence to solve certain problems autonomously based on the thought physical basics. Integrated acquirement of soft skills. 		
Workload: Total: 180 h 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: The module "Physics IV - Solid State Physics" of the Bachelor of Physics / Materials Science program should be completed first.		
Frequency: each winter semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Surfaces and Interfaces Mode of Instruction: lecture Language: English Frequency: annually Contact Hours: 3
Learning Outcome: see module description
Contents: see module description
Literature: <ul style="list-style-type: none"> • Ertl, Küppers: Low Energy Electrons and Surface Chemistry (VCH) • Lüth: Surfaces and Interfaces of Solids (Springer) • Zangwill: Physics at Surfaces (Cambridge) • Feldmann, Mayer: Fundamentals of Surface and thin Film Analysis (North Holland) • Henzler, Göpel: Oberflächenphysik des Festkörpers (Teubner) • Briggs, Seah: Practical Surface Analysis I und II (Wiley)
Part of the Module: Surfaces and Interfaces (Tutorial) Mode of Instruction: exercise course Language: English Frequency: annually Contact Hours: 1
Examination Surfaces and Interfaces written exam / length of examination: 90 minutes, graded Examination Prerequisites: Surfaces and Interfaces

Module PHM-0287: Method Course: Spectroscopy of Organic Semiconductors <i>Method Course: Spectroscopy of Organic Semiconductors</i>		8 ECTS/LP
Version 1.2.0 (since SoSe22) Person responsible for module: Prof. Dr. Wolfgang Brütting Dr. Alexander Hofmann		
Contents: <ul style="list-style-type: none">• Growth and characterisation of thin films (vapor deposition, spin coating, surface profiling, atomic force microscopy)• Optical spectroscopy and photophysics (ellipsometry, transmission, steady-state and time-resolved photoluminescence, orientation anisotropy)• Charge transport (space-charge limited current, field-effect mobility, doping)• Light-emitting diodes (different emitter types, device efficiency measurement and simulation)• Solar cells (different device architectures, power and quantum efficiency measurements)		
Learning Outcomes / Competences: The students <ul style="list-style-type: none">• get familiar with the preparation of organic semiconductors as thin films and in devices and learn basic spectroscopic techniques to characterise them,• acquire skills to analyse properties of the materials taking into account their specific features,• and have the competence to comprehend and attend to current problems in the field of organic electronics.• Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to critically interpret experimental results.		
Workload: Total: 240 h		
Conditions: Basic knowledge of atomic and solid state physics, as well as elementary concepts of quantum physics.		Credit Requirements: Bestehen der Modulprüfung
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method Course: Spectroscopy of Organic Semiconductors Mode of Instruction: lecture Language: English / German Contact Hours: 2		
Lehr-/Lernmethoden: The basics for each topic will be taught in class, e.g. using black board and beamer presentation. For some topics, we will use videos for inverted classroom as well.		
Literature: <ul style="list-style-type: none">• M. Schwoerer, H. Ch. Wolf: Organic Molecular Solids (Wiley-VCH)• A. Köhler, H. Bässler: Electronic Processes in Organic Semiconductors (Wiley-VCH)• S.R. Forrest: Organic Electronics (Oxford Univ. Press)		
Assigned Courses: Method Course: Spectroscopy of Organic Semiconductors (lecture)		

**
Part of the Module: Method Course: Spectroscopy of Organic Semiconductors (Practical Course) Mode of Instruction: internship Language: English / German Contact Hours: 4
Lehr-/Lernmethoden: After teaching in class, the students will go to the lab to get practical experience with each topic and acquire/analyze their own data.
Assigned Courses: Method Course: Spectroscopy of Organic Semiconductors (Practical Course) (internship) **

Examination Method Course: Spectroscopy of Organic Semiconductors report, graded Test Frequency: when a course is offered
--

Module PHM-0297: Method Course: Methods in Bioanalytics <i>Method Course: Methods in Bioanalytics</i>		8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. Janina Bahnemann		
Contents: <ul style="list-style-type: none"> - Basic concepts of instrumental analytics, sensor technology, validation, quality assurance - Biological basics for sensor design and sample components - Biological markers, biomaterials and targets: bioreceptors: antibodies, enzymes, aptamers, cells, nanoparticles - Sensor principles / transducers: optical, thermal, electrochemical, electromechanical, colorimetric - Sensor materials (e.g., silicon, gold, plastics, polymers) - Immobilization of bioreceptors on sensor materials - Lateral flow assays, Point-of-Care diagnostics - Carbohydrate and lipid analysis: Chromatographic methods (HPLC, GC, DC, MS) - Amino acid analytics: HPLC, fluorescence spectroscopy - Nucleic acid analytics: PCR method, sequencing, electrophoresis, microarrays - Protein analytics: Chromatography, electrophoresis, spectroscopy, Bradford assay - Cell analytics: Flow cytometry and microscopy - Concepts and materials for sensor development and optimization: e.g., Microfluidics, additive manufacturing, nanoporous materials, nanoparticles, amplifiers 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • Students will be able to use acquired analytical expertise to adequately describe and correlate basic principles of bioanalysis and their applications. • Students will be able to transfer acquired knowledge from the lecture to practical applications in the experimental practical course. • Students will demonstrate self-competence of work organization as well as social competence by working in small groups. • Students will learn to identify proteins using various analytical methods, to set up biosensors for measuring glucose concentrations, and to scientifically evaluate, comprehensibly record in writing, and present the practical results. 		
Remarks: ELECTIVE COMPULSORY MODULE Number of students will be limited to 9.		
Workload: Total: 240 h		
Conditions: keine / none		Credit Requirements: Practical work and written report
Frequency: each semester	Recommended Semester: 1. - 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: none

Examination

Method Course: Methods in Bioanalytics

report, Practical work and written report on practical work, graded

Module PHM-0298: Method course: From macroscopic to microscopic ferroic properties <i>Method course: From macroscopic to microscopic ferroic properties</i>		8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. István Kézsmárki		
Contents: Within this course, the students will learn the basic concepts of ferroic properties, e.g. ferroelectricity and ferromagnetism, which play a key role in materials science and engineering, at cryogenic temperatures. This method course will teach the students to understand and perform experiments on ferroic materials first, on a macroscopic scale and, after having a fundamental understanding, microscopic measurements. Therefore, the students will be taught in preparing single crystals, planning complex measurement procedures, and evaluating the measured data. Magnetic Properties will be investigated via: <ul style="list-style-type: none">• Magnetization measurements• Susceptibility measurements• Magnetic force microscopy (MFM) Electric Properties will be investigated via: <ul style="list-style-type: none">• Linear and non-linear dielectric spectroscopy• SEM / EDX• Polarization measurements• Conductive atomic force microscopy (cAFM) / piezo force microscopy (PFM)		
Learning Outcomes / Competences: <ul style="list-style-type: none">• fundamental knowledge of properties in electric and magnetic materials• instruction in experimental methods for investigation of ferroic properties of condensed matter• perform experiments at cryogenic temperatures• trained in planning and performing complex experiments• learn to evaluate and analyze the collected data• combining knowledge of macroscopic measurements to understand microscopic data to fully understand electric and magnetic properties		
Remarks: ELECTIVE COMPULSORY MODULES		
Workload: Total: 240 h		
Conditions: Recommended: basic knowledge in solid state physics and ferroic properties		Credit Requirements: Participation in laboratory course and oral examination.
Frequency: each semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module

Language: English

Contact Hours: 4

Examination

Method course: From macroscopic to microscopic ferroic properties

oral exam / length of examination: 45 minutes, graded

Module PHM-0363: Method Course: Applying Theoretical Concepts from Non-equilibrium Statistical Physics <i>Method Course: Applying Theoretical Concepts from Non-equilibrium Statistical Physics</i>	8 ECTS/LP
Version 1.0.0 (since WS23/24) Person responsible for module: Prof. Dr. Christoph Alexander Weber	
Contents: <ul style="list-style-type: none"> • Phase separation kinetics of liquid mixtures • Dynamics of simple fluids • Kinetics of semi-dilute, elastic, and inelastic gases • Self-propelled, aligning gases • Motility-induced phase separation • Long-range polar order in two-dimensional active systems • Active Brownian motion • Mixtures of hot and cold particles • Stochastic chemical reaction kinetics at non-dilute conditions 	
Learning Outcomes / Competences: Students will learn the following hard skills: <ul style="list-style-type: none"> • fundamental non-equilibrium theories (hydrodynamic transport theories, kinetic theories, dynamic density functional theory, stochastic descriptions, and Ito's stochastic calculus) • coarse-graining methods (lattice-based, moment expansion, Mori-Zwanzig, ...) • analytical techniques (stability analysis, partial equilibria, multi-scale perturbation theories) • simulations techniques (lattice gas automaton, Monte-Carlo, agent-based, stochastic particle dynamics, stochastic rotational dynamics, ...), • discretization methods (Gillespie, spectral method, finite differences, finite elements) • programming in Python and/or C++ Students will learn the following soft skills: <ul style="list-style-type: none"> • Students learn how to apply theoretical concepts from non-equilibrium thermodynamics • They get trained to establish links between theoretical concepts and modern research problems • They will build links between lecture and textbook knowledge and applied research question, providing excellent preparation for Master's and Ph.D. research in theoretical physics • Students learn how to work in teams • They get trained in autonomous working with scientific literature in English, improving written and spoken English during lectures and exercises, • Students get stimulated to develop interdisciplinary thinking, and working 	
Remarks: It may be helpful if the students have participated or are simultaneously participating in one of the following Master's courses: "Non-equilibrium Statistical Physics" and "Introduction to Stochastic Processes". Please note that this is not a prerequisite since there will be introductory lectures before the application sessions.	
Workload: Total: 240 h 60 h studying of course content (self-study) 60 h studying of course content through exercises / case studies (self-study) 90 h lecture and exercise course (attendance) 30 h exam preparation (self-study)	
Conditions: Pronounced interest in theoretical physics and Statistical Physics	Credit Requirements: Bestehen der Modulprüfung

Frequency: each winter semester	Recommended Semester:	Minimal Duration of the Module: semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program

oral exam / length of examination: 1 hours, graded

Module PHM-0147: Method Course: Electron Microscopy <i>Method Course: Electron Microscopy</i>		8 ECTS/LP
Version 1.3.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider		
Contents: Scanning electron microscopy (SEM) <ul style="list-style-type: none">• Electron optical components• Detectors• EDX, EBSD Transmission electron microscopy (TEM) <ul style="list-style-type: none">• Diffraction• Contrast mechanisms• High resolution EM• Scanning TEM• Analytical TEM• Aberration correction		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none">• get introduced to the basics of scanning electron microscopy and transmission electron microscopy, using lectures to teach the theoretical basics, which are afterwards deepened using practical courses,• are able to operate SEM and TEM on a basic level• are able to characterize materials using different electron microscopy techniques• Acquire the competence to decide about a technique feasible for a certain problem.• acquire the competence to assess EM images, also regarding artefacts• learn to search for scientific literature and to formulate a scientific report		
Remarks: ELECTIVE COMPULSORY MODULE		
Workload: Total: 240 h 90 h lecture and exercise course (attendance) 150 h studying of course content using provided materials (self-study)		
Conditions: Recommended: knowledge of solid-state physics, reciprocal lattice		Credit Requirements: regular participation, oral presentation (10 min), written report (one report per group)
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method Course: Electron Microscopy Mode of Instruction: lecture Language: English Contact Hours: 2		

Contents:**SEM:**

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

TEM:

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM

Examination

Method Course: Electron Microscopy

report, graded

Examination Prerequisites:

Method Course: Electron Microscopy

Module PHM-0146: Method Course: Electronics for Physicists and Materials Scientists <i>Method Course: Electronics for Physicists and Materials Scientists</i>		8 ECTS/LP
Version 2.0.0 (since SoSe22) Person responsible for module: Andreas Hörner		
Contents: 1. Basics in electronic and electrical engineering 2. Quadrupole theory 3. Analog technique, transistor and opamp circuits 4. Boolean algebra and logic 5. Digital electronics and calculation circuits 6. Microprocessors and Networks 7. Basics in Electronic 8. Implementation of transistors 9. Operational amplifiers 10. Digital electronics 11. Practical circuit arrangement		
Learning Outcomes / Competences: The students: • know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the laboratory, • have skills in easy circuit design, measuring and control technology, analog and digital electronics, • have expertise in independent working on circuit problems. They can calculate and develop easy circuits.		
Remarks: ELECTIVE COMPULSORY MODULE Attendance in the Method Course: Electronics for Physicists and Materials Scientists (combined lab course AND lecture) excludes credit points for the lecture Electronics for Physicists and Materials Scientists .		
Workload: Total: 240 h 140 h studying of course content using provided materials (self-study) 60 h lecture (attendance) 10 h preparation of written term papers (self-study) 30 h internship / practical course (attendance)		
Conditions: none		Credit Requirements: written report (one per group)
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program

Examination

Method Course: Electronics for Physicists and Materials Scientists

written exam / length of examination: 90 minutes, graded

Test Frequency:

each semester

Module PHM-0172: Method Course: Functional Silicate-analogous Materials <i>Method Course: Functional Silicate-analogous Materials</i>		8 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Henning Höppe		
Contents: Synthesis and characterization of functional materials according to the topics: 1. Silicate-analogous compounds 2. Luminescent materials / phosphors 3. Pigments 4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis		
Learning Outcomes / Competences: The students will know how to: • develop functional materials based on silicate-analogous materials, • apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules), • work under non-ambient atmospheres (e.g. reducing, inert conditions), • solve and refine crystal structures from single-crystal data, • describe and classify these structures properly.		
Remarks: ELECTIVE COMPULSORY MODULE		
Workload: Total: 240 h 120 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Recommended: attendance to the lecture "Advanced Solid State Materials"		Credit Requirements: written report (protocol)
Frequency: each semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method Course: Functional Silicate-analogous Materials (Practical Course) Mode of Instruction: laboratory course Language: English Contact Hours: 6		

Learning Outcome:

The students will know how to:

- develop functional materials based on silicate-analogous materials,
- apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),
- work under non-ambient atmospheres (e.g. reducing, inert conditions),
- solve and refine crystal structures from single-crystal data,
- describe and classify these structures properly.

Contents:

Synthesis and characterization of functional materials according to the topics:

1. Silicate-analogous compounds
2. Luminescent materials / phosphors
3. Pigments
4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis

Examination**Method Course: Functional Silicate-analogous Materials**

seminar, graded

Examination Prerequisites:

Method Course: Functional Silicate-analogous Materials

Module PHM-0148: Method Course: Optical Properties of Solids <i>Method Course: Optical Properties of Solids</i>		8 ECTS/LP
Version 1.4.0 (since SoSe15) Person responsible for module: Prof. Dr. Joachim Deisenhofer		
Contents: Electrodynamics of solids <ul style="list-style-type: none"> • Maxwell equations • Electromagnetic waves • Refraction and interference, Fresnel equations FTIR spectroscopy <ul style="list-style-type: none"> • Fourier transformation • Michelson-Morley and Genzel interferometer • Sources and detectors Terahertz Time Domain spectroscopy <ul style="list-style-type: none"> • Generation of pulsed THz radiation • Gated detection, Austin switches Elementary excitations in solid materials <ul style="list-style-type: none"> • Rotational-vibrational bands • Infrared-active phonons • Interband excitations • Crystal-field excitations 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students know the basic principles of far-infrared spectroscopy and terahertz time-domain-spectroscopy, • The students know about fundamental optical excitations in condensed matter materials that can be studied by these spectroscopic methods, • The students obtain the competence to plan and carry out complex experiments, • The students have the skills to evaluate and analyze optical data. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Remarks:		
Workload: Total: 240 h 30 h studying of course content using provided materials (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study) 90 h lecture and exercise course (attendance)		
Conditions: Recommended: basic knowledge in solid-state physics, basic knowledge in electrodynamics and optics		Credit Requirements: written report
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Module PHM-0224: Method Course: Theoretical Concepts and Simulation <i>Method Course: Theoretical Concepts and Simulation</i>		8 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Liviu Chioncel		
Contents: This module covers Monte-Carlo methods (computational algorithms) for classical and quantum problems. Python as programming language will be employed. The following common applications will be discussed: <ul style="list-style-type: none"> • Monte-Carlo integration, stochastic optimization, inverse problems • Feynman path integrals: the connection between classical and quantum systems • Order and disorder in spin systems, fermions, and boson 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students are capable of obtaining numerical solutions to problems too complicated to be solved analytically • The students are able to present (graphically), discuss and analyze the results • The students gain experience in formulating and carrying out a collaborative project 		
Remarks: The number of students will be limited to 8.		
Workload: Total: 240 h 90 h preparation of presentations (self-study) 60 h preparation of written term papers (self-study) 60 h studying of course content (self-study) 90 h (attendance)		
Conditions: Knowledge of the programming language Python is expected on the level taught in the modul PHM-0041. Requirements to understand basic concepts in physics: Classical Mechanics (Newton, Lagrange), Electrodynamics, Thermodynamics and Quantum Mechanics.		Credit Requirements: Passing the module exam
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module	
Part of the Module: Method Course: Theoretical Concepts and Simulation Mode of Instruction: lecture Language: English / German Contact Hours: 2	
Contents: Concepts of classical and quantum statistical physics: <ul style="list-style-type: none"> • the meaning of sampling, random variables, ergodicity • equidistribution, pressure, temperature • path integrals, quantum statistics, enumeration, cluster algorithms

Examination

Method Course: Theoretical Concepts and Simulation

report / work period for assignment: 4 weeks, graded

Description:

The requirement for the credit points is based on a programming project carried out in a team of 2-3 students. The final report contains the formulation and a theoretical introduction into the problem, the numerical implementation, and the presentation of the results.

Module PHM-0223: Method Course: Tools for Scientific Computing <i>Method Course: Tools for Scientific Computing</i>	8 ECTS/LP
Version 1.6.0 (since SoSe18) Person responsible for module: Prof. Dr. Gert-Ludwig Ingold	
Contents: Important tools for scientific computing are taught in this module and applied to specific scientific problems by the students. As far as tools depend on a particular programming language, Python will be employed. Tools to be discussed include: <ul style="list-style-type: none"> • numerical libraries like NumPy and SciPy • visualisation of numerical results • use of a version control system like git and its application in collaborative work • testing of code • profiling • documentation of programs 	
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students are capable of solving a physical problem of some complexity by means of numerical techniques. They are able to visualize the results and to adequately document their program code. • The students know examples of numerical libraries and are able to apply them to solve scientific problems. • The students know methods for quality assurance like the use of unit tests and can apply them to their code. They know techniques to identify run-time problems. • The students know a distributed version control system and are able to use it in a practical problem. • The students have gained practical experience in a collaborative project work. They are able to plan and carry out a programming project in a small group. • The students understand the relevance of the tools taught in the method course for good scientific practice. 	
Remarks: The number of students will be limited to 12.	
Workload: Total: 240 h 60 h studying of course content (self-study) 90 h (attendance) 30 h preparation of presentations (self-study) 60 h preparation of written term papers (self-study)	
Conditions: Knowledge of the programming language Python is expected on the level taught in the module PHM-0295 "Einführung in Prinzipien der Programmierung".	Credit Requirements: The module examination needs to be passed which is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Frequency: irregular	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module**Part of the Module: Method Course: Tools for Scientific Computing****Mode of Instruction:** lecture**Language:** English / German**Contact Hours:** 2**Learning Outcome:**

- The students know the numerical libraries NumPy and SciPy and selected tools for the visualization of numerical results.
- The students know fundamental techniques for the quality assurance of programs like the use of unit tests, profiling and the use of the version control system git. They are able to adequately document their code.
- The students understand the relevance of the tools taught in the method course for good scientific practice.

Contents:

- numerical libraries NumPy and SciPy
- graphics with matplotlib
- version control system Git and workflow for Gitlab/Github
- unit tests
- profiling
- documentation using docstrings and Sphinx

Literature:

- A. Scopatz, K. D. Huff, *Effective Computation in Physics* (O'Reilly, 2015)
- lecture notes are freely available at <https://gertgold.github.io/tools4scicomp>

Assigned Courses:**Method Course: Tools for Scientific Computing** (lecture)

**

Part of the Module: Method Course: Tools for Scientific Computing (Practical Course)**Mode of Instruction:** internship**Language:** English / German**Contact Hours:** 4**Learning Outcome:**

- The students are capable of solving a physical problem of some complexity by means of numerical techniques and to visualize the results.
- They have gained some experience in the application of methods for quality assurance of their code and are able to appropriately document their programs.
- The students are able to work in a team and know how to make use of tools like Gitlab/Github.
- The students are able to present the status of their work, to critically assess it and to accept suggestions from others.

Contents:

The tools discussed in the lecture will be applied to specific scientific problems by small teams of 2-3 students under supervision. The teams regularly inform the other teams in oral presentations on their progress, the tools employed as well as encountered problems and their solution.

Assigned Courses:**Method Course: Tools for Scientific Computing (Practical Course)** (internship)

**

Examination

Method Course: Tools for Scientific Computing

report / work period for assignment: 4 weeks, graded

Test Frequency:

when a course is offered

Description:

The requirement for credit points is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Module PHM-0258: Method course: Charge doping effects in semiconductors <i>Method course: Charge doping effects in semiconductors</i>		8 ECTS/LP
Version 1.0.0 (since SoSe21) Person responsible for module: Prof. Dr. István Kézsmárki Dr. Lilian Prodan, Dr. Somnath Ghara		
Contents: The goal of the method course is to make students familiar with the concept of controlling the type and the concentration of charge carriers in semiconductors, which is widely used approach in electronics and various fields of materials science. For this purpose, the current method course will be dealing with the preparation of various electron-doped and / or hole-doped narrow-gap semiconductors and investigation of the influence of charge doping on transport and magnetic properties. The following techniques will be involved: <ul style="list-style-type: none">• Synthesis of electron and hole doped narrow-gap semiconductors, such as Zn- and Ge-doped GaV4S8, in polycrystalline forms using solid state reaction;• Refining the structure and checking phase purity by X-ray powder diffraction;• Resistivity and magneto-transport measurements;• Hall effect measurements to quantify carrier concentration;• Investigation of the doping-induced changes in the magnetic properties by magnetization measurements.		
Learning Outcomes / Competences: <ul style="list-style-type: none">• The students gain basic knowledge how to tailor the bulk properties of narrow-gap semiconductors via different doping techniques.• The students have detailed knowledge in performing XRD and magnetization experiments and know how to analyze the data.• The students acquire the competence to plan and perform Hall effect and magnetoresistance experiments and evaluate the obtained experimental results.• The students have the skill to distinguish between an n-type and p-type semiconductor.• The students know how to calculate the charge, mobility, and charge carrier density of a semiconductor using information obtained from the Hall effect experiments.		
Remarks: ELECTIVE COMPULSORY MODULES		
Workload: Total: 240 h		
Conditions: Recommended: basic knowledge in solid state physics and semiconductors;		Credit Requirements: Written report on the experiments (editing time 2 weeks)
Frequency: each semester	Recommended Semester:	Minimal Duration of the Module: semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method course: Charge doping effects in semiconductors (Practical Course) Mode of Instruction: internship Language: English Contact Hours: 4		

Contents:

The following techniques will be involved:

- Synthesis of electron and hole doped narrow-gap semiconductors, such as Zn- and Ge-doped GaV₄S₈, in poly-crystalline forms using solid state reaction;
- Refining the structure and checking phase purity by X-ray powder diffraction;
- Resistivity and magneto-transport measurements;
- Hall effect measurements to quantify carrier concentration;
- Investigation of the doping-induced changes in the magnetic properties by magnetization measurements.

Assigned Courses:

Method course: Charge doping effects in semiconductors

report, graded

Module PHM-0285: Method Course: Computational Biophysics <i>Method Course: Computational Biophysics</i>		8 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. Dr. Nadine Schwierz-Neumann		
Contents: Life relies on the interactions of proteins, nucleic acids, lipids and other biomolecules. This course introduces computational methods to study the structure, dynamics and mechanics of these biomolecules. In the first part of the course, the physics behind biomolecular simulations is explained and the basic principles of classical and statistical mechanics are reviewed. In the second part, different simulation techniques are introduced including molecular dynamics simulations and Monte Carlo simulations. Subsequently the methods are applied to biological systems consisting of proteins, nucleic acids and lipids		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • Students develop an active understanding of the principles, the capacity and limitations of biomolecular simulations • Students learn to solve typical biophysical problems analytically and numerically • Students learn how to run and analyze computer simulations of biological matter • Students learn to visualize, document and present their simulation results 		
Remarks: Number of students will be limited to 15.		
Workload: Total: 240 h 90 h exam preparation (self-study) 60 h studying of course content (self-study) 90 h (attendance)		
Conditions: Knowledge of classical mechanics on the bachelor level is expected.		Credit Requirements: Passing of the module exam
Frequency: every 4th semester ab SoSe2022	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method Course: Computational Biophysics Mode of Instruction: lecture Language: English / German Contact Hours: 2		
Learning Outcome: <ul style="list-style-type: none"> • Theoretical background of biomolecular simulations • Computational methods to describe the structure, dynamics and mechanics of biomolecules 		

Contents:

- Introduction to classical mechanics in phase space
- Probability and information theory
- Connection to statistical mechanics
- Molecular dynamics basics
- Monte Carlo Simulations
- Forces and force fields in biomolecular systems
- Simulations in different ensembles
- Calculating macroscopic thermodynamic properties from simulations

Literature:

Biophysics and Biomaterials

Module PHM-0059: Magnetism <i>Magnetism</i>		6 ECTS/LP
Version 1.3.0 (since WS09/10) Person responsible for module: Dr. Hans-Albrecht Krug von Nidda		
Contents: <ul style="list-style-type: none"> • History, basics • Magnetic moments, classical and quantum phenomenology • Exchange interaction and mean-field theory • Magnetic anisotropy and magnetoelastic effects • Thermodynamics of magnetic systems and applications • Magnetic domains and domain walls • Magnetization processes and micro magnetic treatment • AC susceptibility and ESR • Spintransport / spintronics • Recent problems of magnetism 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • know the basic properties and phenomena of magnetic materials and the most important methods and concepts for their description, like mean-field theory, exchange interactions and micro magnetic models, • have the ability to classify different magnetic phenomena and to apply the corresponding models for their interpretation, and • have the competence independently to treat fundamental and typical topics and problems of magnetism. • Integrated acquirement of soft skills. 		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study)		
Conditions: basics of solid-state physics and quantum mechanics		
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Magnetism Mode of Instruction: lecture Language: English Contact Hours: 3

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Magnetism

Module PHM-0048: Physics and Technology of Semiconductor Devices <i>Physics and Technology of Semiconductor Devices</i>		6 ECTS/LP
Version 1.0.0 (since SoSe23) Person responsible for module: apl. Prof. Dr. Helmut Karl		
Contents: <ol style="list-style-type: none"> 1. Basic properties of semiconductors (electronic bandstructure, doping, carrier excitations and carrier transport) 2. Semiconductor diodes and transistors 3. Semiconductor technology 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • Basic knowledge of solid-state and semiconductor physics such as electronic bandstructure, doping, carrier excitations, and carrier transport. • Application of developed concepts (effective mass, quasi-Fermi levels) to describe the basic properties of semiconductors. • Application of these concepts to describe and understand the operation principles of semiconductor devices such as diodes and transistors • Knowledge of the technologically relevant methods and tools in semiconductor micro- and nanofabrication. • Integrated acquisition of soft skills: autonomous working with specialist literature in English, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working. 		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: recommended prerequisites: basic knowledge in solid state physics, statistical physics and quantum mechanics.		
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module

Examination

Physics and Technology of Semiconductor Devices

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Physics and Technology of Semiconductor Devices

Module PHM-0049: Nanostructures / Nanophysics <i>Nanostructures / Nanophysics</i>		6 ECTS/LP
Version 1.2.0 (since WS09/10) Person responsible for module: Prof. Dr. István Kézsmárki		
Contents: <ol style="list-style-type: none"> 1. Semiconductor quantum wells, wires and dots, low dimensional electron systems 2. Magnetotransport in low-dimensional systems, Quantum-Hall-Effect, Quantized conductance 3. Optical properties of nanostructures and their application in modern optoelectronic devices, Nanophotonics 4. Fabrication and detection techniques of nanostructures 5. Ferroic properties of nanostructures (Ferroelectricity, Magnetism, Multiferroicity) 6. Nano-bio-magnetism (magnetotactic bacteria, magnetoreception, malaria) 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students gain basic knowledge of the fundamental concepts in modern nanoscale science. • The students have detailed knowledge of low-dimensional semiconductor structures and how these systems can be applied for novel functional devices for high-frequency electronics and optoelectronics • The students gain competence in selecting different fabrication and characterization approaches for specific nanostructures. • The students are able apply these concepts to tackle present problems in nanophysics. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload: Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study)		
Conditions: recommended prerequisites: basic knowledge in solid-state physics and quantum mechanics.		
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Nanostructures / Nanophysics (lecture)

**(online/digital) **

Examination

Nanostructures / Nanophysics

oral exam / length of examination: 30 minutes, graded

Examination Prerequisites:

Nanostructures / Nanophysics

Module PHM-0203: Physics of Cells <i>Physics of Cells</i>		6 ECTS/LP
Version 1.3.0 (since SoSe22) Person responsible for module: Dr. Christoph Westerhausen		
Contents: <ul style="list-style-type: none"> Physical principles in Biology Cell components and their material properties: cell membrane, organelles, cytoskeleton Thermodynamics of proteins and biological membranes Physical methods and techniques for studying cells Cell adhesion – interplay of specific, universal and elastic forces Tensile strength and elasticity of tissue - macromolecules of the extra cellular matrix Micro mechanics and properties of the cell as a biomaterial Cell adhesion Cell migration Cell actuation, cell-computer-communication, and cell stimulation 		
Learning Outcomes / Competences: The students <ul style="list-style-type: none"> know basic physical properties of human cells, as building blocks of living organisms and their material properties. know the basic functionality of mechanical and optical methods to study living cells know physical descriptions of fundamental biological processes and properties of biomaterials. are able to express biophysical questions and define model systems to answer these questions. The students improve the key competences: <ul style="list-style-type: none"> self-dependent working with English specialist literature. processing of experimental data. interdisciplinary thinking and working. 		
Workload: 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Mechanics, Thermodynamics		Credit Requirements: Bestehen der Modulprüfung
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Learning Outcome: see module description
Contents: see module description
Literature: see module description
Examination Physics of Cells oral exam / length of examination: 30 minutes, graded

Module MRM-0155: Resource and Waste Mineralogy <i>Rohstoff- und Abfallmineralogie</i>		6 ECTS/LP
Version 1.17.0 Person responsible for module: Prof. Dr. Daniel Vollprecht		
Contents: 1. Introduction: What is Mineralogy? 2. General Mineralogy 3. Special Mineralogy 4. Economic Geology 5. Mineral Processing 6. Technical Mineralogy 7. Archaeometry 8. Waste Mineralogy 9. Environmental Mineralogy		
Learning Outcomes / Competences: The students • know the research subject and research methods of mineralogy • are able to determine the most important minerals by their diagnostic properties • understand the processes of formation of deposits • know mineral property and element raw materials • understand mineral reactions in technical processes of metallurgy and ceramics • understand the principles of hydraulic and alkali-activated binders • understand the inorganic-chemical reactions in thermal waste treatment plants • know mineral by-products and wastes • know the application of mineralogical methods in archaeology • are able to apply mineralogical methods to mineral resources and wastes • understand the interactions between natural and synthetic mineral phases and their environment		
Remarks: Registration via Digicampus required		
Workload: Total: 180 h		
Conditions: Comprehensive knowledge of chemistry		Credit Requirements: Participation in the exercises Passing the module exam
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Assigned Courses: Rohstoff- und Abfallmineralogie / Resource & Waste Mineralogy (lecture + exercise) **
Examination Rohstoff- und Abfallmineralogie portfolio exam, graded
Parts of the Module
Part of the Module: Übung zu Rohstoff- und Abfallmineralogie Mode of Instruction: exercise course Language: English / German Contact Hours: 2
Learning Outcome: see module description
Contents: Determination excercises, lab experiments, field trips, industrial excursions
Assigned Courses: Rohstoff- und Abfallmineralogie / Resource & Waste Mineralogy (lecture + exercise) **

Module PHM-0270: Computational Chemistry and Material Modeling <i>Computerchemie/Materialmodellierung</i>		6 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: PD Georg Eickerling		
Contents: The lecture provides advanced insights into computational chemistry and modeling of molecular and solid-state materials: <ul style="list-style-type: none">• advanced introduction into the methods and concepts of quantum-chemical calculations• <i>mean-field</i> and <i>Density Functional Theory</i> methods• methods for describing electronic correlation• modeling chemical reactions of molecular compounds• from molecules to solids: modeling materials employing periodic boundary conditions• modeling dynamic and spectroscopic properties of molecules and solids (IR, Raman, NMR UV/VIS)• modeling materials under pressure• modeling surfaces		
Learning Outcomes / Competences: The students <ul style="list-style-type: none">• know advanced concepts for modeling molecular and solid state compounds• are able to evaluate the applicability of these concepts to a range of questions that might occur within the scope of materials chemistry and are thus able to evaluate the required and achievable accuracy of the selected computational method• are able to apply the obtained knowledge of the theoretical concepts within the scope of hands-on quantum chemical calculations and under guidance develop strategies for investigating theoretical aspects of materials chemistry• have the expertise to analyze, understand and evaluate the results obtained from different quantum chemical calculation methods and are competent to develop strategies for an advanced analysis of thus problems		
Workload: Total: 180 h 45 h lecture (attendance) 15 h exercise course (attendance) 30 h studying of course content using literature (self-study) 60 h studying of course content through exercises / case studies (self-study) 30 h (self-study)		
Conditions: It is recommended to attend module PHM-0248 first.		Credit Requirements: passing the module examination
Frequency: each summer semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Examination

Moderne Diffraktionsmethoden in den Materialwissenschaften

written exam / length of examination: 90 minutes, graded

Module PHM-0301: Supramolecules and molecular design in materials science <i>Supramoleküle und molekulares Design in den Materialwissenschaften</i>		6 ECTS/LP
Version 1.0.0 (since SoSe23) Person responsible for module: Dr. Hana Bunzen		
Contents: <ul style="list-style-type: none"> An introduction and historical overview (supramolecular chemistry, self-assembly, supramolecular materials, molecular machines, etc.) Non-covalent interactions (e.g. H-bonds, electrostatic interactions, hydrophobic effect), thermodynamics Host-guest chemistry and typical hosts (e.g. calixarenes, resorcinarenes, crown ethers, cucurbiturils, cyclodextrins) Concepts of supramolecular synthesis (e.g. template, self-organization, self-sorting, cooperative binding) Methods for characterization of supramolecular compounds (e.g. NMR, UV/Vis titrations, mass spectrometry) Functional molecules (e.g. molecular switches, rotaxanes, sensors, molecular machines) Supramolecular materials (non-covalent polymers, gelators, liquid crystals) Supramolecular interactions in biological molecules (protein folding, ion channels, cell membranes) 		
Learning Outcomes / Competences: The students <ul style="list-style-type: none"> know the basic concepts of supramolecular chemistry and typical host molecules, and have a detailed understanding of non-covalent interactions between molecules, can apply the concepts of supramolecular synthesis to unknown compounds and find ways to prepare them, are familiar with methods for analyzing non-covalent interactions and for structural characterization of supramolecular compounds, know the importance of supramolecular chemistry for functional molecules, in materials science and in living systems, acquire scientific skills to search for scientific literature and to evaluate scientific content, are able to independently acquire further knowledge of the scientific topic using various forms of information 		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study)		
Conditions: Recommended: basic knowledge in organic chemistry, basic knowledge in coordination chemistry		Credit Requirements: one written examination, 90 min.
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Part of the Module: Supramolecules and molecular design in materials science Mode of Instruction: lecture Language: English Contact Hours: 3
Contents: see module description
Literature: J. Steed, J. Atwood: Supramolecular Chemistry (Wiley) W. Jones, C.N.R. Rao, Supramolecular Organization and Materials Design (Cambridge University Press)
Assigned Courses: Supramolecules and molecular design in materials science (lecture) **
Part of the Module: Supramolecules and molecular design in materials science (Tutorial) Mode of Instruction: exercise course Language: English Contact Hours: 1
Assigned Courses: Übung zu Supramolecules and molecular design in materials science (exercise course) **
Examination Supramolecules and molecular design in materials science written exam / length of examination: 90 minutes, graded Examination Prerequisites: Supramolecules and molecular design in materials science

Module PHM-0361: Catalysis <i>Catalysis</i>		6 ECTS/LP
Version 1.0.0 (since WS23/24) Person responsible for module: Prof. Dr. Wolfgang Scherer		
Contents: Introduction to catalysis (history and milestones) Basic principles of <i>homogeneous</i> and <i>heterogeneous</i> catalysis Homogeneous and heterogeneous <i>catalytic processes</i> Examples: <ul style="list-style-type: none">• Activation and utilization of carbon dioxide in catalytic processes• Methane conversion to methanol, hydrogen and ammonia• Carbonylation of methanol• Carbon monoxide conversion• Nitrogen fixation• Polymerization of olefines• Hydrogenation and hydroformylation of olefins, Fischer-Tropsch synthesis, C1 chemistry• Metathesis		
Learning Outcomes / Competences: By completing this course, the students <ul style="list-style-type: none">• gain the <i>knowledge</i> in fundamental concepts of homogeneous and heterogeneous catalysis to <i>understand</i> complex reaction mechanisms, the chemical bonding, structural chemistry and chemical properties of homogeneous and heterogeneous catalysts.• they gain <i>practical skills</i> to synthesize and characterize homogeneous and heterogeneous catalysts by means of spectroscopic techniques (UV-Vis, NMR, IR und Raman spectroscopy).• they gain the <i>intellectual skills</i> to design/optimize catalysts with regard to external control parameters (pressure, temperature, solvents) and intrinsic factors (steric request/electronic structure of the catalytically active sites).• they obtain the <i>transferrable skills</i> to extract relevant information from scientific literature.		
Remarks: The module can be studied in the MSc programs "Materialchemie", "Materials Science" and "Materials Science and Engineering"		
Workload: Total: 180 h		
Conditions: Basic knowledge in inorganic and organic chemistry		Credit Requirements: Passing the module exam
Frequency: each winter semester each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Examination**Functional and Smart Macromolecular Materials**

written exam / length of examination: 90 minutes, graded

Module MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) <i>CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering)</i>		6 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr.-Ing. Dietmar Koch		
Contents: The development of ceramic fiber composite components is an iterative product development process due to the component-specific material properties. These iterations serve to assess feasibility or material characterization and are often associated with time-, cost-, and resource-intensive testing programs, feature prototypes, or demonstrator components. Therefore, this approach is heuristic (trial and error). In contrast, CMC (Ceramic Matrix Composite) product development through ICME (Integrated Computational Materials Engineering) aims to partially shift the development process into the virtual space using ICME tools, thereby minimizing real sample and component testing through the use of digital models. The ICME approach originally developed for metallic materials can be applied particularly to fiber-reinforced composites due to their pronounced dependence on material properties on the manufacturing process and component geometry.		
Learning Outcomes / Competences: In the lecture on CMC (Ceramic Matrix Composite) product development using ICME (Integrated Computational Materials Engineering), students are provided with an overview of the current state of technology, the currently available ICME tools in the field of fiber-reinforced composites, and their application through case studies.		
Conditions: Keine		Credit Requirements: Bestehen der Modulprüfung
Frequency: each winter semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Übung zu CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering) Mode of Instruction: exercise course Language: German Contact Hours: 1		
Parts of the Module		
Part of the Module: CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering) Mode of Instruction: lecture Language: German Contact Hours: 3		
Lehr-/Lernmethoden: Die Vorlesung findet im seminaristischen Stil statt und wird mit Fallstudien ergänzt. Die Übungen bestehen aus Übungsaufgaben zum aktuellen Vorlesungsinhalt. Zum Lösen der Aufgaben werden neben den Vorlesungsunterlagen und Musterlösungen auch eigens hierfür erstellte Kurzvideos bereitgestellt. Fragen zu den Aufgaben werden gemeinsam in der Vorlesung besprochen und geklärt.		
Examination CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering) written exam / length of examination: 60 minutes, graded		

Module PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties <i>Fiber Reinforced Composites: Processing and Materials Properties</i>		6 ECTS/LP
Version 1.2.0 (since SoSe15) Person responsible for module: Dr. Judith Moosburger-Will		
Contents: <ul style="list-style-type: none"> • Production of fibers (e.g. glass, carbon, or ceramic fibers) • Physical and chemical properties of fibers and their precursor materials • Physical and chemical properties of commonly used polymeric and ceramic matrix materials • Semi-finished products • Composite production technologies • Application of fiber reinforced materials 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • know the physical and chemical properties of fibers, matrices, and fiber-reinforced materials. • know the basics of production technologies of fibers, polymeric, ceramic matrices, and fiber-reinforced materials. • know the application areas of composite materials. • have the competence to explain material properties of fibers, matrices, and composites. • have the competence to choose the right materials according to application relevant conditions. • are able to independently acquire further knowledge of the scientific topic using various forms of information. 		
Remarks: ELECTIVE COMPULSORY MODULE		
Workload: Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Recommended: basic knowledge in materials science, basic lectures in organic chemistry		
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Module MRM-0089: Recycling of composites <i>Recycling von Verbundwerkstoffen (Composites)</i>		6 ECTS/LP
Version 4.0.0 (since SoSe24) Person responsible for module: Dr. Kunzmann		
Learning Outcomes / Competences: The students know various composite materials and their composition and can classify them into different categories. They learn the most important basic principles of material separation with regard to chemical, physical and mechanical processing and can name important analyses for assessing the quality of recyclates. Using examples, students will learn how these processes can be used for different composite materials and what approaches are available for processing them into recycled products. The students are confronted with the challenges for research and industry.		
Workload: Total: 180 h		
Conditions: Recommended: basic knowledge in chemistry and materials science		Credit Requirements: Passing the module exam
Frequency: each summer semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]

Module MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) <i>CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering)</i>		6 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr.-Ing. Dietmar Koch		
Contents: The development of ceramic fiber composite components is an iterative product development process due to the component-specific material properties. These iterations serve to assess feasibility or material characterization and are often associated with time-, cost-, and resource-intensive testing programs, feature prototypes, or demonstrator components. Therefore, this approach is heuristic (trial and error). In contrast, CMC (Ceramic Matrix Composite) product development through ICME (Integrated Computational Materials Engineering) aims to partially shift the development process into the virtual space using ICME tools, thereby minimizing real sample and component testing through the use of digital models. The ICME approach originally developed for metallic materials can be applied particularly to fiber-reinforced composites due to their pronounced dependence on material properties on the manufacturing process and component geometry.		
Learning Outcomes / Competences: In the lecture on CMC (Ceramic Matrix Composite) product development using ICME (Integrated Computational Materials Engineering), students are provided with an overview of the current state of technology, the currently available ICME tools in the field of fiber-reinforced composites, and their application through case studies.		
Conditions: Keine		Credit Requirements: Bestehen der Modulprüfung
Frequency: each winter semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Lehr-/Lernmethoden: Die Vorlesung findet im seminaristischen Stil statt und wird mit Fallstudien ergänzt. Die Übungen bestehen aus Übungsaufgaben zum aktuellen Vorlesungsinhalt. Zum Lösen der Aufgaben werden neben den Vorlesungsunterlagen und Musterlösungen auch eigens hierfür erstellte Kurzvideos bereitgestellt. Fragen zu den Aufgaben werden gemeinsam in der Vorlesung besprochen und geklärt.		
Examination CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering) written exam / length of examination: 60 minutes, graded		

Module PHM-0252: Optical Excitations in Materials <i>Optical Excitations in Materials</i>		6 ECTS/LP
Version 1.9.0 (since SoSe20) Person responsible for module: Prof. Dr. Joachim Deisenhofer		
Contents: 1. Classical Light-Matter Interaction in Solids: <ul style="list-style-type: none"> • Introduction: Typical Optical Response of Metals and Semiconductors • Classical electromagnetic wave propagation in linear optical media (Maxwell Equations, refractive index, reflection, transmission, absorption) • Anisotropic media, birefringence, longitudinal solutions • Classical Drude-Lorentz oscillator model • Spectroscopic techniques: Fourier-Transform-Spectroscopy, Time-domain Spectroscopy, Ellipsometry 2. Quantum Aspects of Light-Matter interaction <ul style="list-style-type: none"> • qm approach to absorption and emission: Lorentzian lineshape, Fermi's Golden Rule • Electric-dipole and magnetic-dipole approximation • Rabi-oscillations and the need for quantum optical approaches • A glimpse of non-linear optics 3. Excitations in different material classes <ul style="list-style-type: none"> • Optical properties of semiconductors/insulators, molecular materials, metals • Absorption and Luminescence, excitons, luminescence centers • Optoelectronics, detectors, light emitting devices • Quantum confined structures: tuning of absorption and emission 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students gain basic knowledge of the fundamental concepts of light-matter interaction in solids. • The students have detailed knowledge of classical models of light-propagation and absorption and get the competence to choose adequate spectroscopic techniques for measuring the optical properties of different material classes. • The students have a basic understanding of quantum aspects of optical processes in different materials. • The students are able to apply these concepts to understand and analyse optical properties of different materials. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload: Total: 180 h 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Basic knowledge of classical electrodynamics, atomic and solid state physics.		
Frequency: each semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Examination**Optical Excitations in Materials**

written exam / length of examination: 90 minutes, graded

Module PHM-0253: Dielectric Materials <i>Dielectric Materials</i>		6 ECTS/LP
Version 2.0.0 (since SoSe23) Person responsible for module: PD Dr. Peter Lunkenheimer		
Contents: <ul style="list-style-type: none"> • Experimental techniques: quantities, broadband dielectric spectroscopy, nonlinear and polarization measurements • Dynamic processes in dielectric materials: relaxation processes, phenomenological models • Dielectric properties of disordered matter: liquids, glasses, plastic crystals • Charge transport: hopping conductivity, universal dielectric response • Ionic conductivity: conductivity mechanism, dielectric properties, advanced electrolytes for energy-storage devices • Maxwell-Wagner relaxations: equivalent-circuits, applications (supercapacitors), colossal-dielectric-constant materials • Electroceramics: Materials, Properties (relaxor ferroelectric, ferroelectric, antiferroelectric and multiferroic), Applications 		
Learning Outcomes / Competences: Students know the fundamentals of electromagnetic wave propagation and have a sound background for a broad spectrum of dielectric phenomena. They are able to analyze materials requirements and to interpret dielectric spectra in a broad frequency range. They have the competence to select materials for different kinds of applications and to critically assess experimental results on dielectric properties.		
Remarks: Elective compulsory module		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Basic knowledge of solid state physics		Credit Requirements: Pass of module exam
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]

Dielectric Materials

Module PHM-0270: Computational Chemistry and Material Modeling <i>Computerchemie/Materialmodellierung</i>		6 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: PD Georg Eickerling		
Contents: The lecture provides advanced insights into computational chemistry and modeling of molecular and solid-state materials: <ul style="list-style-type: none">• advanced introduction into the methods and concepts of quantum-chemical calculations• <i>mean-field</i> and <i>Density Functional Theory</i> methods• methods for describing electronic correlation• modeling chemical reactions of molecular compounds• from molecules to solids: modeling materials employing periodic boundary conditions• modeling dynamic and spectroscopic properties of molecules and solids (IR, Raman, NMR UV/VIS)• modeling materials under pressure• modeling surfaces		
Learning Outcomes / Competences: The students <ul style="list-style-type: none">• know advanced concepts for modeling molecular and solid state compounds• are able to evaluate the applicability of these concepts to a range of questions that might occur within the scope of materials chemistry and are thus able to evaluate the required and achievable accuracy of the selected computational method• are able to apply the obtained knowledge of the theoretical concepts within the scope of hands-on quantum chemical calculations and under guidance develop strategies for investigating theoretical aspects of materials chemistry• have the expertise to analyze, understand and evaluate the results obtained from different quantum chemical calculation methods and are competent to develop strategies for an advanced analysis of thus problems		
Workload: Total: 180 h 45 h lecture (attendance) 15 h exercise course (attendance) 30 h studying of course content using literature (self-study) 60 h studying of course content through exercises / case studies (self-study) 30 h (self-study)		
Conditions: It is recommended to attend module PHM-0248 first.		Credit Requirements: passing the module examination

Module PHM-0298: Method course: From macroscopic to microscopic ferroic properties <i>Method course: From macroscopic to microscopic ferroic properties</i>		8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. István Kézsmárki		
Contents: Within this course, the students will learn the basic concepts of ferroic properties, e.g. ferroelectricity and ferromagnetism, which play a key role in materials science and engineering, at cryogenic temperatures. This method course will teach the students to understand and perform experiments on ferroic materials first, on a macroscopic scale and, after having a fundamental understanding, microscopic measurements. Therefore, the students will be taught in preparing single crystals, planning complex measurement procedures, and evaluating the measured data. Magnetic Properties will be investigated via: <ul style="list-style-type: none">• Magnetization measurements• Susceptibility measurements• Magnetic force microscopy (MFM) Electric Properties will be investigated via: <ul style="list-style-type: none">• Linear and non-linear dielectric spectroscopy• SEM / EDX• Polarization measurements• Conductive atomic force microscopy (cAFM) / piezo force microscopy (PFM)		
Learning Outcomes / Competences: <ul style="list-style-type: none">• fundamental knowledge of properties in electric and magnetic materials• instruction in experimental methods for investigation of ferroic properties of condensed matter• perform experiments at cryogenic temperatures• trained in planning and performing complex experiments• learn to evaluate and analyze the collected data• combining knowledge of macroscopic measurements to understand microscopic data to fully understand electric and magnetic properties		
Remarks: ELECTIVE COMPULSORY MODULES

Module PHM-0058: Organic Semiconductors <i>Organic Semiconductors</i>		6 ECTS/LP
Version 1.6.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Brütting		
Contents: Basic concepts and applications of organic semiconductors Introduction <ul style="list-style-type: none"> • Materials and preparation • Structural properties • Electronic structure • Optical and electrical properties Devices and Applications <ul style="list-style-type: none"> • Organic metals • Light-emitting diodes • Solar cells • Field-effect transistors 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • know the basic structural and electronic properties of organic semiconductors as well as the essential function of organic semiconductor devices, • have acquired skills for the classification of the materials taking into account their specific features in the functioning of components, • and have the competence to comprehend and attend to current problems in the field of organic electronics. • Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to interpret experimental results 		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 40 h studying of course content through exercises / case studies (self-study) 40 h studying of course content using provided materials (self-study) 40 h studying of course content using literature (self-study)		
Conditions: It is strongly recommended to complete the module solid-state physics first. In addition, knowledge of molecular physics is desired.		
Frequency: Sommersemester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 5	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Organic Semiconductors Mode of Instruction: lecture Lecturers: Prof. Dr. Wolfgang Brütting Language: English Contact Hours: 3

when a course is offered

Examination Prerequisites:

Organic Semiconductors

Module PHM-0066: Superconductivity <i>Superconductivity</i>		6 ECTS/LP
Version 1.0.0 (since WS11/12) Person responsible for module: Prof. Dr. Philipp Gegenwart		
Contents: <ul style="list-style-type: none"> • Introductory Remarks and Literature • History and Main Properties of the Superconducting State, an Overview • Phenomenological Thermodynamics and Electrodynamics of the SC • Ginzburg-Landau Theory • Microscopic Theories • Fundamental Experiments on the Nature of the Superconducting State • Josephson-Effects • High Temperature Superconductors • Application of Superconductivity 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • will get an introduction to superconductivity, • by a presentation of experimental results they will learn the fundamental properties of the superconducting state, • are informed about the most important technical applications of superconductivity. • Special attention will be drawn to the basic concepts of the main phenomeno-logical and microscopic theories of the superconducting state, to explain the experimental observations. • For self-studies a comprehensive list of further reading will be supplied. 		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study)		
Conditions: <ul style="list-style-type: none"> • Physik IV – Solid-state physics • Theoretical physics I-III 		
Frequency: each summer semester not in summer term 2023	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]

Superconductivity

oral exam / length of examination: 30 minutes, graded

Examination Prerequisites:

Superconductivity

Module PHM-0060: Low Temperature Physics <i>Low Temperature Physics</i>		6 ECTS/LP
Version 1.2.0 (since WS09/10) Person responsible for module: Prof. Dr. Philipp Gegenwart		
Contents: <ul style="list-style-type: none"> • Introduction • Properties of matter at low temperatures • Cryoliquids and superfluidity • Cryogenic engineering • Thermometry • Quantum transport, criticality and entanglement in matter 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • know the basic properties of matter at low temperatures and the corresponding experimental techniques, • have acquired the theoretical knowledge to perform low-temperature measurements, • and know how to experimentally investigate current problems in low-temperature physics. 		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Physik IV - Solid-state physics		
Frequency: each winter semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Low Temperature Physics Mode of Instruction: lecture Language: English Contact Hours: 3		
Learning Outcome: see module description		

Contents:

- Introduction (temperature scale, history of low temperature physics)
- Properties of matter at low temperatures (specific heat, thermal expansion, electrical resistance, thermal conductivity)
- Cryoliquids and superfluidity (nitrogen, hydrogen, 4-He and 3-He: phase diagrams, superfluidity)
- Cryogenic engineering (liquefaction of gases, helium cryostats, dilution refrigerator, adiabatic demagnetization, further techniques)
- Thermometry (primary and secondary thermometers at different temperature regimes)
- Quantum Matter (quantum Transport, Quantum phase transitions, Quantum spin liquids)

Literature:

Examination**Low Temperature Physics**

oral exam / length of examination: 30 minutes, graded

Examination Prerequisites:

Low Temperature Physics

Module PHM-0068: Spintronics <i>Spintronics</i>		6 ECTS/LP
Version 1.8.0 (since SoSe14) Person responsible for module: PD Dr. German Hammerl		
Contents: <ul style="list-style-type: none"> • Basic micromagnetic interactions (exchange, anisotropy, DMI, stray fields, external fields) and where they come from • Emergence of spin textures such as domain walls and bubbles/skyrmions • Torques acting on the local magnetization (magnetic field torque, current in-plane spin-transfer torque, spin-Hall effect and spin-orbit torques) • Switching • Motion of spin textures, 1D model and Thiele equation • Magneto-resistance and Hall effects and their utility in electrical readout • Ultrafast effects • Device applications • Experimental techniques in the field of spintronics 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • know the fundamental interactions in magnetic materials, the basic spintronic effects, and the related device structures, • have the competence to deal with current problems in the field of spintronics largely autonomously, • are able to choose materials in order to achieve demanding properties in spintronic applications, • are able to design device components to achieve spin polarization, • acquire scientific skills in finding and understanding current literature dealing with spintronic devices and applications, identifying suitable materials and material combinations with respect to their applicability for spintronic devices. 		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study)		
Conditions: none

Examination**Spintronics**

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Spintronics

Module PHM-0057: Physics of Thin Films <i>Physics of Thin Films</i>		6 ECTS/LP
Version 1.8.0 (since WS09/10) Person responsible for module: PD Dr. German Hammerl		
Contents: <ul style="list-style-type: none"> • Thin film growth: basics, thermodynamic considerations, surface kinetics, growth mechanisms • Thin film growth techniques: vacuum technology, physical vapor deposition, chemical vapor deposition • Analysis and characterization of thin films: in-sit methods, ex-situ methods, direct methods • Properties and applications of thin films 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • know a broad spectrum of methods of thin film technology and material properties and applications of thin films, • have the competence to deal with current problems in the field of thin film technology largely autonomous, • are able to choose the right substrates and thin film materials for epitaxial thin film growth to achieve desired application conditions, • acquire skills of combining the various technologies for growing thin layers with respect to their properties and applications, and • acquire scientific soft skills to search for scientific literature, understand technical english, work with literature in the field of thin films, interpret experimental results. 		
Workload: Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study)

Literature: 1. M. H. Levitt, Spin Dynamics, John Wiley and Sons, Ltd., 2008. 2. H. Günther, NMR spectroscopy, Wiley 2001. 3. M.Duer, Introduction to Solid-State NMR spectroscopy, Blackwell Publishing Ltd., 2004. 4. D. Canet: NMR - concepts and methods, Springer, 1994.		
Examination Novel Methods in Solid State NMR Spectroscopy written exam / length of examination: 90 minutes, graded		

Module PHM-0167: Oxidation and Corrosion <i>Oxidation and Corrosion</i>	6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider	
Contents: Introduction Review of thermodynamics Chemical equilibria Electrochemistry Electrode kinetics High temperature oxidation Localized corrosion <ul style="list-style-type: none"> • Shallow pit corrosion • Pitting corrosion • Crevice corrosion • Intercrystalline corrosion • Stress corrosion cracking • Fatigue corrosion • Erosion corrosion • Galvanic corrosion Water and seawater corrosion Corrosion monitoring Corrosion properties of specific materials Specific corrosion problems in certain branches <ul style="list-style-type: none"> • Oil and Gas industry • Automobile industry • Food industry Corrosion protection <ul style="list-style-type: none"> • Passive layers • Reaction layers (Diffusion layers ...) • Coatings (organic, inorganic) • Cathodic, anodic protection • Inhibitors 	
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • know the the fundamental basics, mechanics, types of corrosion processes and their electrochemical explanation • obtain the skill to understand typical electrochemical quantification of corrosion processes. • aquire the competence to assess corrosion phenomena from typical damage patterns 	
Remarks: Scheduled every second summer semster.	
Workload: Total: 180 h 60 h lecture and exercise course (attendance)	

120 h studying of course content using provided materials (self-study)		
Conditions: Recommended: good knowledge in materials science, basic knowledge in physical chemistry		Credit Requirements: written exam (90 min)
Frequency: each summer semester alternating with PHM-0168	Recommended Semester: from 3.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Oxidation and Corrosion

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Oxidation and Corrosion

Module PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties <i>Fiber Reinforced Composites: Processing and Materials Properties</i>		6 ECTS/LP
Version 1.2.0 (since SoSe15) Person responsible for module: Dr. Judith Moosburger-Will		
Contents: <ul style="list-style-type: none"> • Production of fibers (e.g. glass, carbon, or ceramic fibers) • Physical and chemical properties of fibers and their precursor materials • Physical and chemical properties of commonly used polymeric and ceramic matrix materials • Semi-finished products • Composite production technologies • Application of fiber reinforced materials 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • know the physical and chemical properties of fibers, matrices, and fiber-reinforced materials. • know the basics of production technologies of fibers, polymeric, ceramic matrices, and fiber-reinforced materials. • know the application areas of composite materials. • have the competence to explain material properties of fibers, matrices, and composites. • have the competence to choose the right materials according to application relevant conditions. • are able to independently acquire further knowledge of the scientific topic using various forms of information. 		
Remarks: ELECTIVE COMPULSORY MODULE		
Workload: Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Recommended: basic knowledge in materials science, basic lectures in organic chemistry		
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Module PHM-0196: Surfaces and Interfaces II: Joining processes <i>Surfaces and Interfaces II: Joining processes</i>		6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: Dr. Judith Moosburger-Will		
Learning Outcomes / Competences: The students <ul style="list-style-type: none"> - know the application areas of composite materials - know the basics of cohesion and adhesion - know the basics of joining techniques - are introduced to physical and chemical properties metal-metal, metal-polymer and polymer-polymer interfaces - Are able to independently acquire further knowledge of the scientific topic using various forms of information. 		
Workload: Total: 180 h		
Conditions: Basic knowledge on materials science, lecture "Surfaces and Interfaces I" Module Surfaces and Interfaces (PHM-0117) - recommended		Credit Requirements: Bestehen der Modulprüfung
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: any	

Parts of the Module
Part of the Module: Surfaces and Interfaces II: Joining processes Mode of Instruction: lecture Lecturers: Prof. Dr. Siegfried Horn Language: German Contact Hours: 3
Contents: The following topics are treated: <ul style="list-style-type: none"> - Introduction to adhesion - Role of surface and interface properties - Introduction to interactions at surfaces and interfaces - Adhesion theories - Surface and interface energy - Surface treatment techniques - Joining techniques - Physical and chemical properties of joints - Applications
Lehr-/Lernmethoden: Lecture: Beamer presentation and Blackboard Exercise: Exercises on recent topics, specialization of lecture contents
Literature: Literature, including actual scientific papers and reviews, will be announced at the beginning of the lecture.

Examination**Surfaces and Interfaces II: Joining processes**

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Surfaces and Interfaces II: Joining processes

Non-Destructive Testing

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Non-Destructive Testing

Module PHM-0203: Physics of Cells <i>Physics of Cells</i>		6 ECTS/LP
Version 1.3.0 (since SoSe22) Person responsible for module: Dr. Christoph Westerhausen		
Contents: <ul style="list-style-type: none"> Physical principles in Biology Cell components and their material properties: cell membrane, organelles, cytoskeleton Thermodynamics of proteins and biological membranes Physical methods and techniques for studying cells Cell adhesion – interplay of specific, universal and elastic forces Tensile strength and elasticity of tissue - macromolecules of the extra cellular matrix Micro mechanics and properties of the cell as a biomaterial Cell adhesion Cell migration Cell actuation, cell-computer-communication, and cell stimulation 		
Learning Outcomes / Competences: The students <ul style="list-style-type: none"> know basic physical properties of human cells, as building blocks of living organisms and their material properties. know the basic functionality of mechanical and optical methods to study living cells know physical descriptions of fundamental biological processes and properties of biomaterials. are able to express biophysical questions and define model systems to answer these questions. The students improve the key competences: <ul style="list-style-type: none"> self-dependent working with English specialist literature. processing of experimental data. interdisciplinary thinking and working. 		
Workload: 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Mechanics, Thermodynamics		Credit Requirements: Bestehen der Modulprüfung
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Part of the Module: Surfaces and Interfaces (Tutorial) Mode of Instruction: exercise course Language: English Frequency: annually Contact Hours: 1
Examination Surfaces and Interfaces written exam / length of examination: 90 minutes, graded Examination Prerequisites: Surfaces and Interfaces

Module PHM-0146: Method Course: Electronics for Physicists and Materials Scientists <i>Method Course: Electronics for Physicists and Materials Scientists</i>		8 ECTS/LP
Version 2.0.0 (since SoSe22) Person responsible for module: Andreas Hörner		
Contents: 1. Basics in electronic and electrical engineering 2. Quadrupole theory 3. Analog technique, transistor and opamp circuits 4. Boolean algebra and logic 5. Digital electronics and calculation circuits 6. Microprocessors and Networks 7. Basics in Electronic 8. Implementation of transistors 9. Operational amplifiers 10. Digital electronics 11. Practical circuit arrangement		
Learning Outcomes / Competences: The students: • know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the laboratory, • have skills in easy circuit design, measuring and control technology, analog and digital electronics, • have expertise in independent working on circuit problems. They can calculate and develop easy circuits.		
Remarks: ELECTIVE COMPULSORY MODULE Attendance in the Method Course: Electronics for Physicists and Materials Scientists (combined lab course AND lecture) excludes credit points for the lecture Electronics for Physicists and Materials Scientists .		
Workload: Total: 240 h 140 h studying of course content using provided materials (self-study) 60 h lecture (attendance) 10 h preparation of written term papers (self-study) 30 h internship / practical course (attendance)		
Conditions: none		Credit Requirements: written report (one per group)
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program

Module PHM-0147: Method Course: Electron Microscopy <i>Method Course: Electron Microscopy</i>		8 ECTS/LP
Version 1.3.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider		
Contents: Scanning electron microscopy (SEM) <ul style="list-style-type: none">• Electron optical components• Detectors• EDX, EBSD Transmission electron microscopy (TEM) <ul style="list-style-type: none">• Diffraction• Contrast mechanisms• High resolution EM• Scanning TEM• Analytical TEM• Aberration correction		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none">• get introduced to the basics of scanning electron microscopy and transmission electron microscopy, using lectures to teach the theoretical basics, which are afterwards deepened using practical courses,• are able to operate SEM and TEM on a basic level• are able to characterize materials using different electron microscopy techniques• Acquire the competence to decide about a technique feasible for a certain problem.• acquire the competence to assess EM images, also regarding artefacts• learn to search for scientific literature and to formulate a scientific report		
Remarks: ELECTIVE COMPULSORY MODULE		
Workload: Total: 240 h 90 h lecture and exercise course (attendance) 150 h studying of course content using provided materials (self-study)		
Conditions: Recommended: knowledge of solid-state physics, reciprocal lattice		Credit Requirements: regular participation, oral presentation (10 min), written report (one report per group)
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method Course: Electron Microscopy Mode of Instruction: lecture Language: English Contact Hours: 2		

Contents:**SEM:**

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

TEM:

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM

Module PHM-0154: Method Course: Modern Solid State NMR Spectroscopy <i>Method Course: Modern Solid State NMR Spectroscopy</i>		8 ECTS/LP
Version 2.0.0 (since SoSe17) Person responsible for module: Prof. Dr. Leo van Wüllen		
Contents: Physical foundations of NMR spectroscopy Internal interactions in NMR spectroscopy <ul style="list-style-type: none">• Chemical shift interaction• Dipole interaction and• Quadrupolar interaction Magic Angle Spinning techniques Modern applications of NMR in materials science Experimental work at the Solid-State NMR spectrometers, computer-aided analysis and interpretation of acquired data		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none">• gain basic knowledge of the physical foundations of modern Solid-State NMR spectroscopy,• gain basic practical knowledge of operating a solid-state NMR spectrometer,• can -- under guidance -- plan, perform, and analyze modern solid-state NMR experiments for the structural characterization of advanced materials.		
Remarks: ELECTIVE COMPULSORY MODULE		
Workload: Total: 240 h 30 h studying of course content using literature (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using provided materials (self-study) 90 h lecture and exercise course (attendance)		
Conditions: The attendance of the lecture "NOVEL METHODS IN SOLID STATE NMR SPECTROSCOPY" is highly recommended.		Credit Requirements: Bestehen der Modulprüfung
Frequency: irregular	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method Course: Modern Solid State NMR Spectroscopy Mode of Instruction: seminar Language: English Contact Hours: 2		

Literature:

- M. H. Levitt, spin Dynamics, John Wiley and Sons, Ltd., 2008.
- H. Günther NMR spectroscopy, Wiley, 2001.
- M. Duer, Introduction to Solid-State NMR spectroscopy, Blackwell Publishing Ltd., 2004.
- D. Canet, NMR - concepts and methods, Springer, 1994.

Part of the Module: Method Course: Modern Solid State NMR Spectroscopy (Practical Course)

Mode of Instruction: laboratory course

Language: English

Contact Hours: 4

Literature:

1. M. H. Levitt, Spin Dynamics, John Wiley and Sons, Ltd., 2008.
2. H. Günther, NMR spectroscopy, Wiley 2001.
3. M.Duer, Introduction to Solid-State NMR spectroscopy, Blackwell Publishing Ltd., 2004.
4. D. Canet: NMR - concepts and methods, Springer, 1994.

Examination

Method Course: Modern Solid State NMR Spectroscopy

report / work period for assignment: 2 weeks, graded

Examination Prerequisites:

Method Course: Modern Solid State NMR Spectroscopy

Module PHM-0206: Method Course: Infrared Microspectroscopy under Pressure <i>Method Course: Infrared Microspectroscopy under Pressure</i>		8 ECTS/LP
Version 1.0.0 (since WS16/17) Person responsible for module: Prof. Dr. Christine Kuntscher		
Contents: Electrodynamics of solids Maxwell equations and electromagnetic waves in matter Optical variables Theories for dielectric function: i. Free carriers in metals and semiconductors (Drude) ii. Interband absorptions in semiconductors and insulators iii. Vibrational absorptions iv. Multilayer systems FTIR microspectroscopy Components of FTIR spectrometers i. Light sources ii. Interferometers iii. Detectors Microscope components High pressure experiments Equipments Pressure calibration Experimental techniques under high pressure i. IR spectroscopy ii. Raman scattering iii. Magnetic measurements iv. Transport measurements		
Learning Outcomes / Competences: The students Learn about the basics of the light interaction with various materials and the fundamentals of FTIR microspectroscopy, Are introduced to the high pressure equipments used in infrared spectroscopy, Learn to carry out infrared microspectroscopy experiments under pressure, Learn to analyze the measured optical spectra.		
Workload: Total: 240 h		
Conditions: none		Credit Requirements: Written report
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Method Course: Infrared Microspectroscopy under Pressure Mode of Instruction: lecture Language: English Contact Hours: 2
Assigned Courses: Method Course: Infrared Microspectroscopy under Pressure (lecture) **
Part of the Module: Method Course: Infrared Microspectroscopy under Pressure (Practical Course) Mode of Instruction: laboratory course Language: English Contact Hours: 4
Assigned Courses: Method Course: Infrared Microspectroscopy under Pressure (Practical Course) (internship) **
Examination Method Course: Infrared Microspectroscopy under Pressure report, graded

Module PHM-0216: Method Course: Thermal Analysis <i>Method Course: Thermal Analysis</i>		8 ECTS/LP
Version 1.0.0 (since WS16/17) Person responsible for module: Prof. Dr. Ferdinand Haider Dr. Robert Horny		
Contents: Methods of thermal analysis: - Differential Scanning Calorimetry: DSC, DTA - Thermo-gravimetric Analysis: TGA - Dilatometry: DIL - Dynamic-mechanical Analysis: DMA -Rheology: RHEO Advanced Methods: - Modulated Differential Scanning Calorimetry: MDSC - Evolved Gas Analysis: EGA (GCMS, FTIR)		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • get to know the basic principles of thermal analysis • learn about fundamental thermal processes in condensed matter ,e.g. phase transitions and relaxation processes (metals, polymers, ceramics) • learn to plan and carry out complex experiments and the usage of advanced measurement techniques • learn how to evaluate and analyze thermal data • are aware of common raw data artefacts leading to misinterpretation 		
Remarks:		
Workload: Total: 240 h 90 h lecture and exercise course (attendance) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study) 30 h studying of course content using provided materials (self-study)		
Conditions: Recommended: basic knowledge in solid-state physics		Credit Requirements: regular participation, oral presentation (10 min), written report
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program

report, graded

Module PHM-0193: Plasma Material Interaction <i>Plasma-Material-Wechselwirkung</i>		6 ECTS/LP
Version 2.4.0 (since WS17/18) Person responsible for module: apl. Prof. Dr.-Ing. Ursel Fantz Dr. Armin Manhard		
Contents: <ul style="list-style-type: none"> Fundamentals of plasma material interactions (winter term) High heat load components in nuclear fusion devices (summer term) 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> Knowledge: The students know the fundamental plasma material interaction processes and their implication for nuclear fusion research in light of the technological boundary conditions and challenges. Skills: The students are proficient in a differentiated analysis of complex systems, based on learning from examples of power exhaust in fusion devices. Competencies: The students are competent in elaborating current topics of plasma material interaction. Integrated achievement of key qualifications: Acquirement of interdisciplinary knowledge, independent work with English literature, abstraction and approximation of complex processes using numerical models, application-oriented thinking and ability to contemplate about experimental results. 		
Remarks: <ul style="list-style-type: none"> The two lectures of this module can be followed in an arbitrary order. Thus, the module can be started at a summer or winter term. The oral exam (30 min, 6 CP) covers both lectures of the module, i.e. 'Fundamentals of plasma material interactions' (winter term) and 'High heat load components in nuclear fusion devices' (summer term). It can be taken at any time (registration in Studis necessary during the registration period, for an exam appointment contact the lecturer). 		
Workload: Total: 180 h 60 h studying of course content using provided materials (self-study) 60 h studying of course content using literature (self-study) 60 h lecture (attendance)		
Conditions: recommended: module "Plasmaphysik und Fusionsforschung"		Credit Requirements: general examination for entire module
Frequency: each semester	Recommended Semester: from 2.	Minimal Duration of the Module: 2 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Fundamentals of plasma material interactions Mode of Instruction: lecture Language: English / German Frequency: each winter semester Contact Hours: 2		
Learning Outcome: see description of module		

Contents:

Fundamental plasma boundary physics, erosion processes: physical sputtering, chemical erosion, radiation induced sublimation, arcs, experimental observation of surface processes in plasmas, methods for characterizing surfaces, coating techniques, hydrogen retention, surface modification by plasmas.

Literature:

- P. Stangeby: The plasma boundary of magnetic fusion devices (IOP, 2000)
- R. Clark, D. Reiter (Eds.): Nuclear Fusion Research, Understanding Plasma-Surface Interactions (Springer, 2005)
- O. Auciello, D. L. Flamm (Eds.): Plasma Diagnostics, Volume 2: Surface Analysis and Interactions (Plasma-Materials Interactions) (Academic Press, 1989)
- M. Turnyanskiy et al.: European roadmap to the realization of fusion energy: Mission for solution on heat-exhaust systems (Fusion Engineering and Design, 2015)

Part of the Module: High heat load components in nuclear fusion devices

Mode of Instruction: lecture

Language: English / German

Frequency: each summer semester

Contact Hours: 2

Learning Outcome:

see description of module

Contents:

Interdependency of material choices and fusion performance, material choices and technologies for power exhaust in a fusion power plant, migration of materials in a fusion plasma, diagnostics for plasma material interaction in fusion devices (in situ and post mortem), numerical methods for studying plasma material interaction.

Literature:

- P. Stangeby: The plasma boundary of magnetic fusion devices (IOP, 2000)
- R. Clark, D. Reiter (Eds.): Nuclear Fusion Research, Understanding Plasma-Surface Interactions (Springer, 2005)

- A. R. Raffray et al.: High heat flux components - Readiness to proceed from near term fusion systems to power plants, Fusion Eng. Des. 85, 93 (2010)

Assigned Courses:

High heat load components in nuclear fusion devices (lecture)

**

Examination**Plasma Material Interaction**

oral exam, One exam on both lectures of the module / length of examination: 30 minutes, graded

Test Frequency:

each semester

Description:

The exam can be taken at any time (registration in Studis necessary during the registration period, for an exam appointment contact the lecturer).

Module PHM-0224: Method Course: Theoretical Concepts and Simulation <i>Method Course: Theoretical Concepts and Simulation</i>		8 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Liviu Chioncel		
Contents: This module covers Monte-Carlo methods (computational algorithms) for classical and quantum problems. Python as programming language will be employed. The following common applications will be discussed: <ul style="list-style-type: none"> • Monte-Carlo integration, stochastic optimization, inverse problems • Feynman path integrals: the connection between classical and quantum systems • Order and disorder in spin systems, fermions, and boson 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students are capable of obtaining numerical solutions to problems too complicated to be solved analytically • The students are able to present (graphically), discuss and analyze the results • The students gain experience in formulating and carrying out a collaborative project 		
Remarks: The number of students will be limited to 8.		
Workload: Total: 240 h 90 h preparation of presentations (self-study) 60 h preparation of written term papers (self-study) 60 h studying of course content (self-study) 90 h (attendance)		
Conditions: Knowledge of the programming language Python is expected on the level taught in the modul PHM-0041. Requirements to understand basic concepts in physics: Classical Mechanics (Newton, Lagrange), Electrodynamics, Thermodynamics and Quantum Mechanics.		Credit Requirements: Passing the module exam
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Method Course: Theoretical Concepts and Simulation Mode of Instruction: lecture Language: English / German Contact Hours: 2
Contents: Concepts of classical and quantum statistical physics: <ul style="list-style-type: none"> • the meaning of sampling, random variables, ergodicity • equidistribution, pressure, temperature • path integrals, quantum statistics, enumeration, cluster algorithms
Literature: <ol style="list-style-type: none"> 1. Werner Krauth, Algorithms and Computations (Oxford University Press, 2006) 2. R. H. Landau, A Survey of Computational Physics (Princeton Univ. Press, 2010)

Module PHM-0223: Method Course: Tools for Scientific Computing <i>Method Course: Tools for Scientific Computing</i>	8 ECTS/LP
Version 1.6.0 (since SoSe18) Person responsible for module: Prof. Dr. Gert-Ludwig Ingold	
Contents: Important tools for scientific computing are taught in this module and applied to specific scientific problems by the students. As far as tools depend on a particular programming language, Python will be employed. Tools to be discussed include: <ul style="list-style-type: none"> • numerical libraries like NumPy and SciPy • visualisation of numerical results • use of a version control system like git and its application in collaborative work • testing of code • profiling • documentation of programs 	
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students are capable of solving a physical problem of some complexity by means of numerical techniques. They are able to visualize the results and to adequately document their program code. • The students know examples of numerical libraries and are able to apply them to solve scientific problems. • The students know methods for quality assurance like the use of unit tests and can apply them to their code. They know techniques to identify run-time problems. • The students know a distributed version control system and are able to use it in a practical problem. • The students have gained practical experience in a collaborative project work. They are able to plan and carry out a programming project in a small group. • The students understand the relevance of the tools taught in the method course for good scientific practice. 	
Remarks: The number of students will be limited to 12.	
Workload: Total: 240 h 60 h studying of course content (self-study) 90 h (attendance) 30 h preparation of presentations (self-study) 60 h preparation of written term papers (self-study)	
Conditions: Knowledge of the programming language Python is expected on the level taught in the module PHM-0295 "Einführung in Prinzipien der Programmierung".	Credit Requirements: The module examination needs to be passed which is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Frequency: irregular	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module**Part of the Module: Method Course: Tools for Scientific Computing****Mode of Instruction:** lecture**Language:** English / German**Contact Hours:** 2**Learning Outcome:**

- The students know the numerical libraries NumPy and SciPy and selected tools for the visualization of numerical results.
- The students know fundamental techniques for the quality assurance of programs like the use of unit tests, profiling and the use of the version control system git. They are able to adequately document their code.
- The students understand the relevance of the tools taught in the method course for good scientific practice.

Contents:

- numerical libraries NumPy and SciPy
- graphics with matplotlib
- version control system Git and workflow for Gitlab/Github
- unit tests
- profiling
- documentation using docstrings and Sphinx

Literature:

- A. Scopatz, K. D. Huff, *Effective Computation in Physics* (O'Reilly, 2015)
- lecture notes are freely available at <https://gertingold.github.io/tools4scicomp>

Assigned Courses:**Method Course: Tools for Scientific Computing** (lecture)

**

Part of the Module: Method Course: Tools for Scientific Computing (Practical Course)**Mode of Instruction:** internship**Language:** English / German**Contact Hours:** 4**Learning Outcome:**

- The students are capable of solving a physical problem of some complexity by means of numerical techniques and to visualize the results.
- They have gained some experience in the application of methods for quality assurance of their code and are able to appropriately document their programs.
- The students are able to work in a team and know how to make use of tools like Gitlab/Github.
- The students are able to present the status of their work, to critically assess it and to accept suggestions from others.

Contents:

The tools discussed in the lecture will be applied to specific scientific problems by small teams of 2-3 students under supervision. The teams regularly inform the other teams in oral presentations on their progress, the tools employed as well as encountered problems and their solution.

Assigned Courses:**Method Course: Tools for Scientific Computing (Practical Course)** (internship)

**

Examination

Method Course: Tools for Scientific Computing

report / work period for assignment: 4 weeks, graded

Test Frequency:

when a course is offered

Description:

The requirement for credit points is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Module PHM-0285: Method Course: Computational Biophysics <i>Method Course: Computational Biophysics</i>		8 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. Dr. Nadine Schwierz-Neumann		
Contents: Life relies on the interactions of proteins, nucleic acids, lipids and other biomolecules. This course introduces computational methods to study the structure, dynamics and mechanics of these biomolecules. In the first part of the course, the physics behind biomolecular simulations is explained and the basic principles of classical and statistical mechanics are reviewed. In the second part, different simulation techniques are introduced including molecular dynamics simulations and Monte Carlo simulations. Subsequently the methods are applied to biological systems consisting of proteins, nucleic acids and lipids		
Learning Outcomes / Competences: <ul style="list-style-type: none">• Students develop an active understanding of the principles, the capacity and limitations of biomolecular simulations• Students learn to solve typical biophysical problems analytically and numerically• Students learn how to run and analyze computer simulations of biological matter• Students learn to visualize, document and present their simulation results		
Remarks: Number of students will be limited to 15.		
Workload: Total: 240 h 90 h exam preparation (self-study) 60 h studying of course content (self-study) 90 h (attendance)		
Conditions: Knowledge of classical mechanics on the bachelor level is expected.		Credit Requirements: Passing of the module exam
Frequency: every 4th semester ab SoSe2022	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method Course: Computational Biophysics Mode of Instruction: lecture Language: English / German Contact Hours: 2		
Learning Outcome: <ul style="list-style-type: none">• Theoretical background of biomolecular simulations• Computational methods to describe the structure, dynamics and mechanics of biomolecules		

Contents:

- Introduction to classical mechanics in phase space
- Probability and information theory
- Connection to statistical mechanics
- Molecular dynamics basics
- Monte Carlo Simulations
- Forces and force fields in biomolecular systems
- Simulations in different ensembles
- Calculating macroscopic thermodynamic properties from simulations

Literature:

Module MRM-0112: Finite element modeling of multiphysics phenomena <i>Finite-Elemente-Modellierung von Multiphysik-Phänomenen</i>		6 ECTS/LP
Version 2.9.0 (since WS19/20) Person responsible for module: Prof. Dr. Markus Sause Dozenten: Prof. Dr. Sause / Prof. Dr Peter		
Learning Outcomes / Competences: The students <ul style="list-style-type: none">• get to know existing numerical methods for modeling and simulation of physical processes and systems• Learn the use and application of numerical methods for realistic problems• Are able to apply basic functional principles of a FEM program by using "COMSOL Multiphysics".		
Remarks: This module is offered by faculty from MRM and Mathematics. It is intended for physics, MSE and WING students, who want to get an insight into a modern FEM program as it is used in academic and industrial applications.		
Workload: Total: 180 h		
Conditions: Recommended: MTH-6110 - Numerische Verfahren für Materialwissenschaftler, Physiker und Wirtschaftsingenieure		Credit Requirements: Bestehen der Modulprüfung
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Finite-Elemente-Modellierung von Multiphysik-Phänomenen Mode of Instruction: lecture Lecturers: Prof. Dr. Malte Peter, Prof. Dr. Markus Sause Language: German Contact Hours: 2		
Contents: The following content will be presented: <ul style="list-style-type: none">• Modeling and simulation of physical processes and systems.• Basic concepts of FEM programs• Generation of meshes• Optimization strategies• Selection of solver lgorithms• Example applications from electrodynamics• Example applications from thermodynamics• Example applications from continuum mechanics• Example applications from fluid dynamics• Coupling of differential equations for the solution of multiphysics phenomena		
Lehr-/Lernmethoden: Slide presentation, classroom discussion

Assigned Courses:**Finite element modeling of multiphysics phenomena (lecture)**

**

Examination**Finite-Elemente-Modellierung von Multiphysik-Phänomenen**

written/oral exam / length of examination: 60 minutes, graded

Parts of the Module**Part of the Module: Übung zu Finite-Elemente-Modellierung von Multiphysik-Phänomenen****Mode of Instruction:** exercise course**Language:** German**Contact Hours:** 2**Lehr-/Lernmethoden:**

Independent reflection of topics to deepen the lecture content

Assigned Courses:**Finite element modeling of multiphysics phenomena (tutorial) (exercise course)**

**

Module MRM-0136: Mechanical Characterization of Materials <i>Mechanical Characterization of Materials</i>		6 ECTS/LP
Version 1.2.0 (since SoSe21) Person responsible for module: Prof. Dr. Markus Sause		
Contents: The following topics are presented: <ul style="list-style-type: none"> • Introduction to material characterization • Linear material behaviour • Non-linear material behaviour • Material failure • Measurement technologies • Tensile testing • Compression testing • Shear testing • Other static testing concepts • Fracture mechanics • Assembly testing • Surface mechanics • Creep testing • Fatigue testing • High-Velocity testing • Component testing 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • Acquire knowledge in the field of materials testing and evaluation of materials. • Are introduced to important concepts in measurement techniques, and material models. • Are able to independently acquire further knowledge of the scientific topic using various forms of information. 		
Workload: Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 60 h lecture and exercise course (attendance)		
Conditions: None		Credit Requirements: Passing the module exam
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Module PHM-0264: Functional and Smart Macromolecular Materials	6 ECTS/LP
Version 1.2.0 (since WS21/22) Person responsible for module: PD Dr. Klaus Ruhland	
<p>Contents:</p> <p><u>Electro-active polymeric materials</u></p> <ul style="list-style-type: none"> • Intrinsically electric conducting polymers (ICPs) • Working principles of ICPs in selected applications • Red/Ox-responsive ICPs • Electrochromism • Electroactive Actuators • Non-electric-conducting electrically functional polymers • Ferroelectric polymers • Piezoelectric polymers • Dielectric elastomers <p><u>Thermo-active polymeric materials</u></p> <ul style="list-style-type: none"> • Difference between invertibility and reversibility • Pyro-electric effect vs electro-caloric effect • High-temperature-stabile polymers • Thermochromic polymers <p><u>Mechano-active polymeric materials</u></p> <ul style="list-style-type: none"> • Shape-Memory-polymers • Self-healing polymers <p><u>Photo-active polymeric materials</u></p> <ul style="list-style-type: none"> • Important chromophors and switching mechanisms • Photo-responsive polymerization initiators and catalysts <p><u>Smart polymer gels</u></p> <ul style="list-style-type: none"> • Thermo-responsive polymer gels (LCST/UCST) • Electrically charged polymer gels • pH-responsive polymer gels 	
<p>Learning Outcomes / Competences:</p> <p>The Students get to know which functional properties can be implemented into macromolecular materials by action of which external stimulus.</p> <p>They reach the ability to differentiate between different mechanisms to introduce smart behaviour into polymeric materials and to decide about dependences between different external stimuli.</p> <p>They will be competent to design smart functional multi-responsive macromolecular materials that serve specific application needs time- and space-dependent.</p> <p>Examples for applications of this type of material design will be discussed.</p>	
<p>Workload:</p> <p>Total: 180 h</p> <p>80 h studying of course content using provided materials (self-study)</p> <p>20 h studying of course content using literature (self-study)</p> <p>60 h lecture (attendance)</p> <p>20 h exercise course (attendance)</p>	
<p>Conditions:</p> <p>none</p>	<p>Credit Requirements:</p> <p>passing the final examination</p>

Examination**Functional and Smart Macromolecular Materials**

written exam / length of examination: 90 minutes, graded

Module PHM-0267: Fundamentals of Materials for Energy <i>Fundamentals of Materials for Energy</i>		6 ECTS/LP
Version 2.2.0 (since SoSe23) Person responsible for module: Prof. Dr. Wolfgang Brütting		
Contents: This class teaches fundamentals of conventional as well as renewable energy conversion. The following topics will be addressed: <ul style="list-style-type: none"> • Basics facts on energy conversion and climate change • Fossil energy • Nuclear energy • Renewable energy • Energy storage and transport 		
Learning Outcomes / Competences: Students know the fundamentals of different energy technologies. They are able to assess their respective efficiency and their potential for covering current and future energy demand. They are able to deal with a specific problem using up-to-date literature and participate in the ongoing discussion about how to cover our increasing need for various forms of energy.		
Conditions: Sound background in physics, in particular solid state physics and thermodynamics.		Credit Requirements: Seminar presentation + written handout.
Frequency: Wintersemester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 5	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Fundamentals of Materials for Energy Mode of Instruction: lecture Lecturers: Prof. Dr. Wolfgang Brütting Language: English / German Frequency: each winter semester Contact Hours: 3

Module PHM-0169: Masterthesis <i>Masterthesis</i>		26 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
Contents: According to chosen topic		
Remarks: The master's thesis will be offered in SoSe 2020 as soon as the current situation allows.		
COMPULSORY MODULE		
Workload: Total: 780 h 260 h studying of course content using provided materials (self-study) 520 h lecture and exercise course (attendance)		
Conditions: To begin with the Masterthesis students must have acquired 72 CP from modules consisting of the modulgroups 1a - 5. Recommended: according to the respective advisor		Credit Requirements: written thesis
Frequency: each semester Siehe Bemerkungen	Recommended Semester: from 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 1	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Masterthesis Language: English
Learning Outcome: see description of module
Contents: see description of module

Examination Masterthesis Master's thesis, graded Examination Prerequisites: Masterthesis

Module PHM-0170: Colloquium <i>Colloquium</i>		4 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
Contents: According to the respective Masterthesis		
Remarks: The Colloquium will be offered in SoSe 2020 as soon as the current situation allows.		
COMPULSORY MODULE		
Workload: Total: 120 h 40 h studying of course content using provided materials (self-study) 80 h lecture and exercise course (attendance)		
Conditions: submission of the masterthesis		
Frequency: each semester Siehe Bemerkungen	Recommended Semester: from 4.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 1	Repeat Exams Permitted: according to the examination regulations of the study program
