University of Augsburg

Module Catalogue

Master Program Materials Science (PO 2016)

Faculty of Mathematics, Natural Sciences, and Materials Engineering

Examination regulations as of 11.05.2016

You can see the other use cases of the modules in Digicampus.

Important additional information due to the corona pandemic:

Please note that due to the ongoing development of the coronavirus pandemic, the details relating to the format of examinations for each module within the module catalogue may not be up to date. The examination formats for each module will be clarified and determined during the course of the semester.

Index by Module Groups

1) 1a Basics of Materials Science I

2) 1b Basics of Materials Science II

3) 2 Methods in Materials Science

c) Engineering of Materials

7) 5 Materials Science Elective Topic (PO16)

8) 6 Finals

9) 7 Functional Materials (International) – zweites Studienjahr Ausland

10) 8 Functional Materials (International) – erstes Studienjahr Ausland

Module PHM-0144: Materials Physics *Materials Physics*	6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Helmut Karl	

Contents:

- Electrons in solids
- Phonons
- Properties of metals, semiconductors and insulators
- Application in optical, electronic, and optoelectronic devices
- Dielectric solids, optical properties

Learning Outcomes / Competences:

- The students know the basic terms and concepts of solid state physics like the free electron gas, electronic band structure, charge carrier statistics, phonons, doping and optical properties,
- are capable to apply derived approximations as the effective mass or the electron-hole concept to describe basic characteristics of semiconductor materials,
- have the competence to apply these concepts for the description of electric, electro-optic and thermal properties of solids and to describe their functionalities,
- understand size effects on material physical properties.
- Integrated acquirement of soft skills: Working with specialist literature, literature search and interdisciplinary thinking.

Remarks:
compulsory module

Workload:
Total: 180 h
120 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions: basic knowledge of solid state physics		
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Materials Physics
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:
see module description

Contents:

- Electrons in solids: Free electron gas, band structure, effective mass
- Lattice dynamics: Phonons, phonon dispersion, acoustic and optical phonons
- Properties of metals: Electrical conductivity, Fermi surfaces, thermal properties
- Properties of semiconductors: Pure, intrinsic semiconductors, equilibrium conditions, doping
- Properties of dielectric materials: Propagation of electromagnetic waves, frequency dependent optical properties, polarization effects.
- Application in devices: Heterostructures, Schottky contact, pn-junction, solar cell, light emission and technological aspects

Literature:

- Hummel R. E. : Electronic Properties of Materials Springer 2001 (UP1000 H925)
- Burns G.: Solid State Physics Academic Press 1990 (UP1000 B967)
- Ashcroft N. W. , Mermin N.D. : Solid State Physics (UP1000 A 824)
- Kittel C. : Introduction to Solid State Physics (UP1000 K 62)

Assigned Courses:

Materials Physics (lecture)

Part of the Module: Materials Physics (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Learning Outcome:

see module description

Assigned Courses:

Materials Physics (Tutorial) (exercise course)

Examination

Materials Physics

written exam / length of examination: 90 minutes

Examination Prerequisites:

Materials Physics

Module PHM-0110: Materials Chemistry

Materials Chemistry

6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Henning Höppe

Contents:

- Revision of basic chemical concepts
- Solid state chemical aspects of selected materials, such as
  - Thermoelectrics
  - Battery electrode materials, ionic conductors
  - Hydrogen storage materials
  - Data storage materials
  - Phosphors and pigments
  - Heterogeneous catalysis
  - nanoscale materials

Learning Outcomes / Competences:

The students will

- be able to apply basic chemical concepts on materials science problems,
- broaden their ability to derive structure-property relations of materials combining their extended knowledge about symmetry-related properties, chemical bonding in solids and chemical properties of selected compound classes,
- be able to assess synthetic approaches towards relevant materials,
- acquire skills to perform literature research using online data bases.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions:

The lecture course is based on the Bachelor in Materials Science courses Chemie I and Chemie III (solid state chemistry).

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Materials Chemistry

Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:

see description of module

Contents:

see description of module

Literature:

- A. R. West, Solid State Chemistry, John Wiley, Chichester.
- U. Müller, Inorganic Structural Chemistry, Wiley-VCH.
- R. Dronskowski, Computational Chemistry of Solid State Materials, Wiley VCH.
- Textbooks on Basics of Inorganic Chemistry such as J. E. Huheey, E. Keiter, R. Keiter, Anorganische Chemie, de Gruyter, or equivalents.
- Moreover, selected reviews and journal articles will be cited on the slides.

Examination

Materials Chemistry

written exam / length of examination: 90 minutes

Examination Prerequisites:

Materials Chemistry

Module PHM-0117: Surfaces and Interfaces *Surfaces and Interfaces*	6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Manfred Albrecht	

Contents:

Introduction

- The importance of surfaces and interfaces

Some basic facts from solid state physics

- Crystal lattice and reciprocal lattice
- Electronic structure of solids
- Lattice dynamics

Physics at surfaces and interfaces

- Structure of ideal and real surfaces
- Relaxation and reconstruction
- Transport (diffusion, electronic) on interfaces
- Thermodynamics of interfaces
- Electronic structure of surfaces
- Chemical reactions on solid state surfaces (catalysis)
- Interface dominated materials (nano scale materials)

Methods to study chemical composition and electronic structure, application examples

- Scanning electron microscopy
- Scanning tunneling and scanning force microscopy
- Auger – electron – spectroscopy
- Photo electron spectroscopy

Learning Outcomes / Competences:

The students:

- have knowledge of the structure, the electronical properties, the thermodynamics, and the chemical reactions on surfaces and interfaces,
- acquire the skill to solve problems of fundamental research and applied sciences in the field of surface and interface physics,
- have the competence to solve certain problems autonomously based on the thought physical basics.
- Integrated acquirement of soft skills.

Workload:

Total: 180 h
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
60 h lecture and exercise course (attendance)

Conditions: The module "Physics IV - Solid State Physics" of the Bachelor of Physics / Materials Science program should be completed first.		
Frequency: each winter semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Surfaces and Interfaces
Mode of Instruction: lecture
Language: English
Frequency: annually
Contact Hours: 3

Learning Outcome:
see module description

Contents:

Examination
Surfaces and Interfaces
written exam / length of examination: 90 minutes
Examination Prerequisites:
Surfaces and Interfaces

Module PHM-0053: Chemical Physics I *Chemical Physics I*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Wolfgang Scherer

Contents:

- Basics of quantum chemical methods
- Molecular symmetry and group theory
- The electronical structure of transition metal complexes

Learning Outcomes / Competences:
The students:

- know the basics of the extended-Hückel-method and the density functional theory,
- know the basics of group theory,
- are able to apply the knowledge gained through consideration of symmetry from vibration-, NMR-, and UV/VIS-spectroscopy, and
- are able to interpret and predict the basical geometric, electronical and magnetical properties of transition metal complexes.
- Integrated acquirement of soft skills: ability to specialize in a scientific topic and to apply the acquired knowledge for solving scientific problems.

Remarks:
It is possible for students to do EHM calculations autonomously and analyze electronical structures of molecules on a computer cluster within the scope of the tutorial.

Workload:
Total: 180 h
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions: It is recommended to complete the experiments FP11 (IR-spectroscopy) and FP17 (Raman-spectroscopy) of the module "Physikalisches Fortgeschrittenenpraktikum".	

Frequency: each winter semester not in winter term 22/23	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Chemical Physics I
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:
see module description

Contents:

- Basics of quantum chemical methods
  - Extended Hueckel method (EHM)
  - Modern quantum chemical methods of chemical physics
  - Application: exemplary calculations and interpretation of simple electronical structures
- Molecular symmetry and group theory
  - Symmetry operations and matrix transformations
  - Point groups
  - Reducible and irreducible representations
  - Character tables
  - Application: infrared- and raman-spectroscopy, NMR-spectroscopy
- The electronical structure of transition metal complexes
  - Ligand field theory and angular-overlap model (AOM)
  - The physical basics of the spectrochemical series
  - Molecular orbital theory of transition metal complexes
  - Application: UV/VIS-spectroscopy, molecular magnetism

Literature:

- J. Reinhold, Quantentheorie der Moleküle (Teubner)
- H.-H. Schmidtke, Quantenchemie (VCH)
- D. C. Harris und M. D. Bertolucci, Symmetry and Spectroscopy (Dover Publications)
- D. M. Bishop, Group Theory and Chemistry (Dover Publications)
- J. K. Burdett, Chemical Bonds: A Dialog (Wiley)
- F. A. Kettle, Physical Inorganic Chemistry (Oxford University Press)
- A. Frisch, Exploring Chemistry with Electronic Structure Methods (Gaussian Inc. Pittsburg, PA)

Part of the Module: Chemical Physics I (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Examination

Chemical Physics I

written exam / length of examination: 90 minutes

Examination Prerequisites:

Chemical Physics I

Module PHM-0287: Method Course: Spectroscopy of Organic Semiconductors

8 ECTS/LP

Method Course: Spectroscopy of Organic Semiconductors

Version 1.0.0 (since SoSe22)
Person responsible for module: Prof. Dr. Wolfgang Brütting
Dr. Alexander Hofmann

Contents:

- Growth and characterisation of thin films (vapor deposition, spin coating, surface profiling, atomic force microscopy)
- Optical spectroscopy and photophysics (ellipsometry, transmission, steady-state and time-resolved photoluminescence, orientation anisotropy)
- Charge transport (space-charge limited current, field-effect mobility, doping)
- Light-emitting diodes (different emitter types, device efficiency measurement and simulation)
- Solar cells (different device architectures, power and quantum efficiency measurements)

Learning Outcomes / Competences:
The students

- get familar with the preparation of organic semiconductors as thin films and in devices and learn basic spectroscopic techniques to characterise them,
- acquire skills to analyse properties of the materials taking into account their specific features,
- and have the competence to comprehend and attend to current problems in the field of organic electronics.
- Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to critically interpret experimental results.

Workload:
Total: 240 h

Conditions:	**Credit Requirements:**
Basic knowledge of atomic and solid state physics, as well as elementary concepts of quantum physics.	Bestehen der Modulprüfung

Frequency: annually	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Spectroscopy of Organic Semiconductors
Mode of Instruction: lecture
Language: English / German
Contact Hours: 2

Lehr-/Lernmethoden:
The basics for each topic will be tought in class, e.g. using black board and beamer presentation.

Literature:

- M. Schwoerer, H. Ch. Wolf: Organic Molecular Solids (Wiley-VCH)
- A. Köhler, H. Bässler: Electronic Processes in Organic Semiconductors (Wiley-VCH)
- S.R. Forrest: Organic Electronics (Oxford Univ. Press)

Assigned Courses:

Method Course: Spectroscopy of Organic Semiconductors (internship)

Part of the Module: Method Course: Spectroscopy of Organic Semiconductors (Practical Course)
Mode of Instruction: internship
Language: English / German
Contact Hours: 4

Lehr-/Lernmethoden:
After teaching in class, the students with go the lab to get practical experience with each topic.

Assigned Courses:

Method Course: Spectroscopy of Organic Semiconductors (internship)

Examination
Method Course: Spectroscopy of Organic Semiconductors
report

Module PHM-0297: Method Course: Methods in Bioanalytics *Method Course: Methods in Bioanalytics*	8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. Janina Bahnemann	

Contents:

- Basic concepts of instrumental analytics, sensor technology, validation, quality assurance
- Biological basics for sensor design and sample components
- Biological markers, biomaterials and targets: bioreceptors: antibodies, enzymes, aptamers, cells, nanoparticles
- Sensor principles / transducers: optical, thermal, electrochemical, electromechanical, colorimetric
- Sensor materials (e.g., silicon, gold, plastics, polymers)
- Immobilization of bioreceptors on sensor materials
- Lateral flow assays, Point-of-Care diagnostics
- Carbohydrate and lipid analysis: Chromatographic methods (HPLC, GC, DC, MS)
- Amino acid analytics: HPLC, fluorescence spectroscopy
- Nucleic acid analytics: PCR method, sequencing, electrophoresis, microarrays
- Protein analytics: Chromatography, electrophoresis, spectroscopy, Bradford assay
- Cell analytics: Flow cytometry and microscopy
- Concepts and materials for sensor development and optimization:

  e.g., Microfluidics, additive manufacturing, nanoporous materials, nanoparticles, amplifiers

Learning Outcomes / Competences:

- Students will be able to use acquired analytical expertise to adequately describe and correlate basic principles of bioanalysis and their applications.
- Students will be able to transfer acquired knowledge from the lecture to practical applications in the experimental practical course.
- Students will demonstrate self-competence of work organization as well as social competence by working in small groups.
- Students will learn to identify proteins using various analytical methods, to set up biosensors for measuring glucose concentrations, and to scientifically evaluate, comprehensibly record in writing, and present the practical results.

Remarks:

ELECTIVE COMPULSORY MODULE

Number of students will be limited to 9.

Workload:

Total: 240 h

Conditions: keine / none		**Credit Requirements:** Practical work and written report
Frequency: nach Bedarf WS und SoSe	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** none	

Parts of the Module

Part of the Module: Method Course: Methods in Bioanalytics
Language: German / English
Contact Hours: 2

Literature:

Examination
Method Course: Methods in Bioanalytics
report, Practical work and written report on practical work

Module PHM-0298: Method course: From macroscopic to microscopic ferroic properties *Method course: From macroscopic to microscopic ferroic properties*	8 ECTS/LP

Version 1.0.0 (since WS22/23)
Person responsible for module: Prof. Dr. István Kézsmárki

Contents:
Within this course, the students will learn the basic concepts of ferroic properties, e.g. ferroelectricity and ferromagnetism, which play a key role in materials science and engineering, at cryogenic temperatures. This method course will teach the students to understand and perform experiments on ferroic materials first, on a macroscopic scale and, after having a fundamental understanding, microscopic measurements. Therefore, the students will be taught in preparing single crystals, planning complex measurement procedures, and evaluating the measured data.

Magnetic Properties will be investigated via:

- Magnetization measurements
- Susceptibility measurements
- Magnetic force microscopy (MFM)

Electric Properties will be investigated via:

- Linear and non-linear dielectric spectroscopy
- SEM / EDX
- Polarization measurements
- Conductive atomic force microscopy (cAFM) / piezo force microscopy (PFM)

Learning Outcomes / Competences:

- fundamental knowledge of properties in electric and magnetic materials
- instruction in experimental methods for investigation of ferroic properties of condensed matter
- perform experiments at cryogenic temperatures
- trained in planning and performing complex experiments
- learn to evaluate and analyze the collected data
- combining knowledge of macroscopic measurements to understand microscopic data to fully understand electric and magnetic properties

Remarks:
ELECTIVE COMPULSORY MODULES

Workload:
Total: 240 h

Conditions: Recommended: basic knowledge in solid state physics and ferroic properties		**Credit Requirements:** Participation in laboratory course and oral examination.
Frequency: each semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method course: From macroscopic to microscopic ferroic properties
Language: English
Contact Hours: 2

Literature:

- N.W. Ashcroft, N.D. Mermin, Festkörperphysik (Oldenbourg)
- Ch. Kittel, Einführung in die Festkörperphysik (Oldenbourg)
- V. K. Wadhawan, Introduction to ferroic materials (CRC Press)
- S. Kalinin, A. Gruverman, Scanning Probe Microscopy - Electrical and electromechanical phenomena at the nanoscale (Springer)
- A. K. Tagantsev, Domains in Ferroic Crystals and Thin films (Springer)

Assigned Courses:

Method course: From macroscopic to microscopic ferroic properties (lecture)

Part of the Module: Method course: From macroscopic to microscopic ferroic properties (Practical Course)
Language: English
Contact Hours: 4

Assigned Courses:

Method course: From macroscopic to microscopic ferroic properties (lecture)

Examination
Method course: From macroscopic to microscopic ferroic properties
oral exam / length of examination: 45 minutes

Module PHM-0171: Method Course: Coordination Materials *Method Course: Coordination Materials*	8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer
Dr. Hana Bunzen

Contents:

1. Synthesis of metal complexes:
2. Analytical characterization of metal complexes (thermal analysis, UV/vis spectroscopy, IR spectroscopy, X-ray diffraction)
3. Material composition and stability studies
4. Functional coordination materials (spin-crossover materials, oxygen-carrying materials)

Learning Outcomes / Competences:
The students will learn how to:

- prepare transition metal complexes employing modern preparation techniques (e.g. microwave synthesis), inert synthesis conditions (Schlenk technique),
- characterize coordination compounds by selected analytical techniques,
- develop functional coordination materials based on organic / inorganic hybrid compounds,
- employ X-ray diffraction methods for structural analysis.

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 240 h
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
120 h lecture and exercise course (attendance)

Conditions: none		**Credit Requirements:** written report (protocols)
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Part of the Module: Method Course: Coordination Materials (Practical Course)
Mode of Instruction: laboratory course
Language: English
Contact Hours: 4

Part of the Module: Method Course: Coordination Materials (Seminar)
Mode of Instruction: seminar
Language: English
Contact Hours: 2

Literature:

- Chemical databases
- Primary literature

Examination

Method Course: Coordination Materials (Seminar)

seminar

Examination Prerequisites:

Method Course: Coordination Materials (Seminar)

Module PHM-0147: Method Course: Electron Microscopy *Method Course: Electron Microscopy*	8 ECTS/LP

Version 1.3.0 (since SoSe15)
Person responsible for module: Prof. Dr. Ferdinand Haider

Contents:
Scanning electron microscopy (SEM)

- Electron optical components
- Detectors
- EDX, EBSD

Transmission electron microscopy (TEM)

- Diffraction
- Contrast mechanisms
- High resolution EM
- Scanning TEM
- Analytical TEM
- Aberration correction

Learning Outcomes / Competences:
The students:

- get introduced to the basics of scanning electron microscopy and transmission electron microscopy, using lectures to teach the theoretical basics, which are afterwards deepened using practical courses,
- are able to operate SEM and TEM on a basic level
- are able to characterize materials using different electron microscopy techniques
- Aquire the competence to decide about a technique feasible for a certain problem.
- aquire the competence to assess EM images, also regarding artefacts
- learn to search for scientific literature and to formulate a scientific report

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 240 h
90 h lecture and exercise course (attendance)
150 h studying of course content using provided materials (self-study)

Conditions:		**Credit Requirements:**
Recommended: knowledge of solid-state physics, reciprocal lattice		regular participation, oral presentation (10 min), written report (one report per group)
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Electron Microscopy
Mode of Instruction: lecture
Language: English
Contact Hours: 2

Contents:

SEM:

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

TEM:

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM

Part of the Module: Method Course: Electron Microscopy (Practical Course)

Mode of Instruction: laboratory course

Language: English

Contact Hours: 4

Examination

Method Course: Electron Microscopy

report

Examination Prerequisites:

Method Course: Electron Microscopy

Module PHM-0146: Method Course: Electronics for Physicists and Materials Scientists *Method Course: Electronics for Physicists and Materials Scientists*	8 ECTS/LP

Version 2.0.0 (since SoSe22)
Person responsible for module: Andreas Hörner

Contents:

1. Basics in electronic and electrical engineering
2. Quadrupole theory
3. Analog technique, transistor and opamp circuits
4. Boolean algebra and logic
5. Digital electronics and calculation circuits
6. Microprocessors and Networks
7. Basics in Electronic
8. Implementation of transistors
9. Operational amplifiers
10. Digital electronics
11. Practical circuit arrangement

Learning Outcomes / Competences:
The students:

- know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the laboratory,
- have skills in easy circuit design, measuring and control technology, analog and digital electronics,
- have expertise in independent working on circuit problems. They can calculate and develop easy circuits.

Remarks:
ELECTIVE COMPULSORY MODULE

Attendance in the **Method Course: Electronics for Physicists and Materials Scientists (combined lab course AND lecture)** excludes credit points for the lecture **Electronics for Physicists and Materials Scientists.**

Workload:
Total: 240 h
140 h studying of course content using provided materials (self-study)
60 h lecture (attendance)
10 h preparation of written term papers (self-study)
30 h internship / practical course (attendance)

Conditions: none		**Credit Requirements:** written report (one per group)
Frequency: each semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Electronics for Physicists and Materials Scientists
Mode of Instruction: lecture
Language: English

Method Course: Electronics for Physicists and Materials Scientists (Practical Course) (internship)

Examination

Method Course: Electronics for Physicists and Materials Scientists

written exam / length of examination: 90 minutes

Module PHM-0172: Method Course: Functional Silicate-analogous Materials *Method Course: Functional Silicate-analogous Materials*	8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Henning Höppe

Contents:
Synthesis and characterization of functional materials according to the topics:

1. Silicate-analogous compounds
2. Luminescent materials / phosphors
3. Pigments
4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis

Learning Outcomes / Competences:
The students will know how to:

- develop functional materials based on silicate-analogous materials,
- apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),
- work under non-ambient atmospheres (e.g. reducing, inert conditions),
- solve and refine crystal structures from single-crystal data,
- describe and classify these structures properly.

Remarks:
ELECTIVE COMPULSORY MODULE

80 h studying of course content through exercises / case studies (self-study)

Conditions: Recommended: attendance to the lecture "Advanced Solid State Materials"		**Credit Requirements:** written report (protocol)
Frequency: each semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Functional Silicate-analogous Materials (Practical Course)
Mode of Instruction: laboratory course
Language: English
Contact Hours: 6

Learning Outcome:

The students will know how to:

- develop functional materials based on silicate-analogous materials,
- apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),
- work under non-ambient atmospheres (e.g. reducing, inert conditions),
- solve and refine crystal structures from single-crystal data,
- describe and classify these structures properly.

Contents:

Synthesis and characterization of functional materials according to the topics:

1. Silicate-analogous compounds
2. Luminescent materials / phosphors
3. Pigments
4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis

Examination

Method Course: Functional Silicate-analogous Materials

seminar

Examination Prerequisites:

Method Course: Functional Silicate-analogous Materials

Module PHM-0148: Method Course: Optical Properties of Solids *Method Course: Optical Properties of Solids*	8 ECTS/LP

Version 1.4.0 (since SoSe15)
Person responsible for module: Prof. Dr. Joachim Deisenhofer

Contents:

Electrodynamics of solids

- Maxwell equations
- Electromagnetic waves
- Refraction and interference, Fresnel equations

FTIR spectroscopy

- Fourier transformation
- Michelson-Morley and Genzel interferometer
- Sources and detectors

Terahertz Time Domain spectroscopy

- Generation of pulsed THz radiation
- Gated detection, Austin switches

Elementary excitations in solid materials

- Rotational-vibrational bands
- Infrared-active phonons
- Interband excitations
- Crystal-field excitations

Learning Outcomes / Competences:

- The students know the basic principles of far-infrared spectroscopy and terahertz time-domain-spectroscopy,
- The students know about fundamental optical excitations in condensed matter materials that can be studied by these spectroscopic methods,
- The students obtain the competence to plan and carry out complex experiments,
- The students have the skills to evaluate and analyze optical data.
- The students acquire scientific skills to search for scientific literature and to evaluate scientific content.

Remarks:

Workload:

Total: 240 h
30 h studying of course content using provided materials (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)
90 h lecture and exercise course (attendance)

Conditions:	**Credit Requirements:**
Recommended: basic knowledge in solid-state physics, basic knowledge in electrodynamics and optics	written report

Frequency: each semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Optical Properties of Solids
Mode of Instruction: lecture
Language: English
Contact Hours: 2

Literature:

Examination
Method Course: Optical Properties of Solids

report

Examination Prerequisites:

Method Course: Optical Properties of Solids

Module PHM-0149: Method Course: Methods in Biophysics

8 ECTS/LP

Method Course: Methods in Biophysics

Version 2.0.0 (since SoSe22)
Person responsible for module: Dr. Christoph Westerhausen

Contents:

Unit Membrane biophysics

- Preparation of synthetic lipid membranes
- Size, fluorescence and phase transition characterization of lipid membranes
- Nanoparticle uptake synthetic membrane

Unit microfluidic

- Microfluidic systems
- Fabrication of microfluidic systems
- Calculation of microfluidic problems

Unit live cell experiments

- Cell culture
- Cell couting and separation using microfluidics

Unit analysis

Learning Outcomes / Competences:

The students:

- know basic terms, concepts and phenomena in biophysics
- acquire basic knowledge of fluidic and biophysical phenomena on small length scales and applications and technologies of microfluidic manipulation and analysis systems,
- learn skills in tissue culture and immun-histochemical staining procedures,
- learn skills in fluorescence microscopy,
- learn skills to calculate fluidic problems on small length scales,
- learn skills to handle microfluidic channel systems.

Remarks:

Examination Prerequisites:
Method Course: Methods in Biophysics

Module PHM-0151: Method Course: Porous Materials - Synthesis and Characterization *Method Course: Porous Materials - Synthesis and Characterization*	8 ECTS/LP

Version 1.0.0 (since SoSe15 to WS21/22)
Person responsible for module: Prof. Dr. Dirk Volkmer

Contents:
Synthesis of porous functional materials (e.g. aerogels, mesoporous silica materials, zeolites, Metal-Organic Frameworks)

Characterization methods

- Structure and composition (XRD, UV/VIS, IR, ESEM, EDX)
- Thermal analysis (TGA)
- Adsorption and diffusion (BET, pore size distribution, pulse chemisorption)
- Catalytic properties (GC/MS, TPO, TPR)

Learning Outcomes / Competences:
The students will learn how to

- use modern solid state preparation techniques (e.g. hydrothermal, solvothermal, microwave synthesis),
- employ analytical methods dedicated to porous materials.

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 240 h
120 h internship / practical course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:	**Credit Requirements:**
Recommended: lecture Functional Porous Materials	written report (editing time 3 weeks) + written exam Please note that final grade of the Method Course consists of the maximum point score of of the exam and the grade of the report of the practical part which are weighted (40:60).

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Method Course: X-ray Diffraction Techniques
written exam / length of examination: 90 minutes

Module PHM-0153: Method Course: Magnetic and Superconducting Materials *Method Course: Magnetic and Superconducting Materials*	8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Philipp Gegenwart

Contents:
Methods of growth and characterization:

Sample preparation (bulk materials and thin films), e.g.,

- arcmelting
- flux-growth
- sputtering and evaporation

Sample characterization, e.g.,

- X-ray diffraction
- electron microscopy, scanning tunneling microscopy
- magnetic susceptibility, electrical resistivity
- specific heat

Learning Outcomes / Competences:
The students

- get to know the basic methods of materials growth and characterization, such as poly- and single crystal growth, thin-film growth, X-ray diffraction, magnetic susceptibility, dc-conductivity, and specific heat measurements
- are trained in planning and performing complex experiments
- learn to evaluate and analyze the collected data, are taught to work on problems in experimental solid state physics, including analysis of measurement results and their interpretation in the framework of models and theories

Workload:
Total: 240 h
90 h lecture and exercise course (attendance)
30 h studying of course content using provided materials (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)

Conditions: Recommended: basic knowledge in solid state physics and quantum mechanics		**Credit Requirements:** presentation and written report on the experiments (editing time 3 weeks, max. 30 pages)
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]

Module PHM-0154: Method Course: Modern Solid State NMR Spectroscopy *Method Course: Modern Solid State NMR Spectroscopy*	8 ECTS/LP

Version 2.0.0 (since SoSe17)
Person responsible for module: Prof. Dr. Leo van Wüllen

Contents:
Physical foundations of NMR spectroscopy

Internal interactions in NMR spectroscopy

- Chemical shift interaction
- Dipole interaction and
- Quadrupolar interaction

Magic Angle Spinning techniques

Modern applications of NMR in materials science

Experimental work at the Solid-State NMR spectrometers, computer-aided analysis and interpretation of acquired data

Learning Outcomes / Competences:
The students:

- gain basic knowledge of the physical foundations of modern Solid-State NMR spectroscopy,
- gain basic practical knowledge of operating a solid-state NMR spectrometer,
- can -- under guidance -- plan, perform, and analyze modern solid-state NMR experiments for the structural characterization of advanced materials.

Remarks:

Method Course: Modern Solid State NMR Spectroscopy

report / work period for assignment: 2 weeks

Examination Prerequisites:

Method Course: Modern Solid State NMR Spectroscopy

Module PHM-0206: Method Course: Infrared Microspectroscopy under Pressure *Method Course: Infrared Microspectroscopy under Pressure*	8 ECTS/LP
Version 1.0.0 (since WS16/17) Person responsible for module: Prof. Dr. Christine Kuntscher	

Contents:

Electrodynamics of solids

Maxwell equations and electromagnetic waves in matter

Optical variables

Theories for dielectric function:

i. Free carriers in metals and semiconductors (Drude)

ii. Interband absorptions in semiconductors and insulators
iii. Vibrational absorptions
iv. Multilayer systems

FTIR microspectroscopy

Components of FTIR spectrometers
i. Light sources
ii. Interferometers
iii. Detectors

Microscope components
High pressure experiments Equipments

Pressure calibration

Experimental techniques under high pressure
i. IR spectroscopy
ii. Raman scattering
iii. Magnetic measurements
iv. Transport measurements

Learning Outcomes / Competences:

The students

Learn about the basics of the light interaction with various materials and the fundamentals of FTIR microspectroscopy,

Are introduced to the high pressure equipments used in infrared spectroscopy,

Learn to carry out infrared microspectroscopy experiments under pressure,

Learn to analyze the measured optical spectra.

Workload:

Module PHM-0224: Method Course: Theoretical Concepts and Simulation

8 ECTS/LP

Method Course: Theoretical Concepts and Simulation

Version 1.0.0 (since WS15/16)
Person responsible for module: Prof. Dr. Liviu Chioncel

Contents:
This module covers Monte-Carlo methods (computational algorithms) for classical and quantum problems. Python as programing language will be employed. The following common applications will be discussed:

- Monte-Carlo integration, stochastic optimization, inverse problems
- Feynman path integrals: the connection between classical and quantum systems
- Oder and disorder in spin systems, fermions, and boson

Learning Outcomes / Competences:
- The students are capable of obtaining numerical solutions to problems too complicated to be solved analytically
- The students are able to present (graphically), discuss and analyze the results
- The students gain experience in formulatind and carrying out a collaborative project

Remarks:
The number of students will be limited to 8.

Workload:
Total: 240 h
90 h preparation of presentations (self-study)
60 h preparation of written term papers (self-study)
60 h studying of course content (self-study)
90 h (attendance)

Conditions:	**Credit Requirements:**
Knowledge of the programming language Phython is expected on the level taught in the modul PHM-0041. Requirements to understand basic concepts in physics: Classical Mechanics (Newton, Lagrange), Electrodynamics, Thermodynamics and Quantum Mechanics.	Bestehen der Modulprüfung

Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Theoretical Concepts and Simulation
Mode of Instruction: lecture
Language: English / German

Examination
Method Course: Theoretical Concepts and Simulation
report / work period for assignment: 4 weeks
Description:
The requirement for the credit points is based on a programming project carried out in a team of 2-3 students. The final report contains the formulation and a theoretical introduction into the problem, the numerical implementation, and the presentation of the results.

Module PHM-0223: Method Course: Tools for Scientific Computing *Method Course: Tools for Scientific Computing*	8 ECTS/LP
Version 1.5.0 (since SoSe18) Person responsible for module: Prof. Dr. Gert-Ludwig Ingold	

Contents:

Important tools for scientific computing are taught in this module and applied to specific scientific problems by the students. As far as tools depend on a particular programming language, Python will be employed. Tools to be discussed include:

- numerical libraries like NumPy and SciPy
- visualisation of numerical results
- use of a version control system like git and its application in collaborative work
- testing of code
- profiling
- documentation of programs

Learning Outcomes / Competences:

- The students are capable of solving a physical problem of some complexity by means of numerical techniques. They are able to visualize the results and to adequately document their program code.
- The students know examples of numerical libraries and are able to apply them to solve scientific problems.
- The students know methods for quality assurance like the use of unit tests and can apply them to their code. They know techniques to identify run-time problems.
- The students know a distributed version control system and are able to use it in a practical problem.
- The students have gained practical experience in a collaborative project work. They are able to plan and carry out a programming project in a small group.
- The students understand the relevance of the tools taught in the method course for good scientific practice.

Remarks:

The number of students will be limited to 12.

Workload:

Total: 240 h
60 h studying of course content (self-study)
90 h (attendance)
30 h preparation of presentations (self-study)
60 h preparation of written term papers (self-study)

Conditions:	**Credit Requirements:**
Knowledge of the programming language Python is expected on the level taught in the module PHM-0243 "Einführung in Prinzipien der Programmierung".	The module examination needs to be passed which is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Frequency: irregular	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Tools for Scientific Computing
Mode of Instruction: lecture
Language: English / German
Contact Hours: 2

Learning Outcome:

- The students know the numerical libraries NumPy and SciPy and selected tools for the visualization of numerical results.
- The students know fundamental techniques for the quality assurance of programs like the use of unit tests, profiling and the use of the version control system git. They are able to adequately document their code.
- The students understand the relevance of the tools taught in the method course for good scientific practice.

Contents:

- numerical libraries NumPy and SciPy
- graphics with matplotlib
- version control system Git and workflow for Gitlab/Github
- unit tests
- profiling
- documentation using docstrings and Sphinx

Literature:

- A. Scopatz, K. D. Huff, *Effective Computation in Physics* (O'Reilly, 2015)
- lecture notes are freely available at https://gertingold.github.io/tools4scicomp

Part of the Module: Method Course: Tools for Scientific Computing (Practical Course)
Mode of Instruction: internship
Language: English / German
Contact Hours: 4

Learning Outcome:

- The students are capable of solving a physical problem of some complexity by means of numerical techniques and to visualize the results.
- They have gained some experience in the application of methods for quality assurance of their code and are able to appropriately document their programs.
- The students are able to work in a team and know how to make use of tools like Gitlab/Github.
- The students are able to present the status of their work, to critically assess it and to accept suggestions from others.

Contents:

The tools discussed in the lecture will be applied to specific scientific problems by small teams of 2-3 students under supervision. The teams regularly inform the other teams in oral presentations on their progress, the tools employed as well as encountered problems and their solution.

Examination

Method Course: Tools for Scientific Computing

report / work period for assignment: 4 weeks

Description:

The requirement for credit points is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. Module PHM-0258: Method course: Charge doping effects in semiconductors *Method course: Charge doping effects in semiconductors*	8 ECTS/LP

Version 1.0.0 (since SoSe21)
Person responsible for module: Prof. Dr. István Kézsmárki
Dr. Lilian Prodan, Dr. Somnath Ghara

Contents:
The goal of the method course is to make students familiar with the concept of controlling the type and the concentration of charge carriers in semiconductors, which is widely used approach in electronics and various fields of materials science. For this purpose, the current method course will be dealing with the preparation of various electron-doped and / or hole-doped narrow-gap semiconductors and investigation of the influence of charge doping on transport and magnetic properties.

The following techniques will be involved:

- Synthesis of electron and hole doped narrow-gap semiconductors, such as Zn- and Ge-doped GaV4S8, in poly-crystalline forms using solid state reaction;
- Refining the structure and checking phase purity by X-ray powder diffraction;
- Resistivity and magneto-transport measurements;
- Hall effect measurements to quantify carrier concentration;
- Investigation of the doping-induced changes in the magnetic properties by magnetization measurements.

Learning Outcomes / Competences:

- The students gain basic knowledge how to tailor the bulk properties of narrow-gap semiconductors via different doping techniques.
- The students have detailed knowledge in performing XRD and magnetization experiments and know how to analyze the data.
- The students acquire the comptence to plan and perform Hall effect and magnetoresistance experiments and evaluate the obtained experimental results.
- The students have the skill to distinguish between an n-type and p-type semiconductor.
- The students know how to calculate the charge, mobility, and charge carrier density of a semiconductor using information obtained from the Hall effect experiments.

Remarks:

Module PHM-0285: Method Course: Computational Biophysics *Method Course: Computational Biophysics*	8 ECTS/LP

Version 1.0.0 (since SoSe22)
Person responsible for module: Prof. Dr. Nadine Schwierz-Neumann

Contents:
Life relies on the interactions of proteins, nucleic acids, lipids and other biomolecules. This course introduces computational methods to study the structure, dynamics and mechanics of these biomolecules. In the first part of the course, the physics behind biomolecular simulations is explained and the basic principles of classical and statistical mechanics are reviewed. In the second part, different simulation techniques are introduced including molecular dynamics simulations and Monte Carlo simulations. Subsequently the methods are applied to biological systems consisting of proteins, nucleic acids and lipids

Learning Outcomes / Competences:

- Students develop an active understanding of the principles, the capacity and limitations of biomolecular simulations
- Students learn to solve typical biophysical problems analytically and numerically
- Students learn how to run and analyze computer simulations of biological matter
- Students learn to visualize, document and present their simulation results

Remarks:
Number of students will be limited to 15.

Workload:
Total: 240 h
90 h exam preparation (self-study)
60 h studying of course content (self-study)
90 h (attendance)

Learning Outcome:

- Theoretical background of biomolecular simulations
- Computational methods to describe the structure, dynamics and mechanics of biomolecules

Contents:

- Introduction to classical mechanics in phase space
- Probability and information theory
- Connection to statistical mechanics
- Molecular dynamics basics
- Monte Carlo Simulations
- Forces and force fields in biomolecular systems
- Simulations in different ensembles
- Calculating macroscopic thermodynamic properties from simulations

Literature:

- Ken Dill and Sarina Bromberg, *Molecular Driving Forces* (2012 by Taylor and Francis Inc; 2nd edition)
- Daan Frenkel and Berend Smit, *Understanding Molecular Simulation* (2002 by Elsevier, 2nd edition)

Part of the Module: Method Course: Computational Biophysics (Practical Course)

Mode of Instruction: internship

Language: English / German

Contact Hours: 4

Learning Outcome:

- Students learn to solve typical biophysical problems analytically and numerically
- Students learn to run and analyze computer simulations of biological matter
- Students learn to visualization, documentation and presentation of results

Contents:

The methods and tools discussed in the lecture will be applied to typical biophysical problems and biological systems. The students work individually or in small teams under supervision. The students present their solutions, document their simulations and summarize their results in a final report.

Examination

Method Course: Computational Biophysics

written exam / length of examination: 2 hours

Module PHM-0158: Introduction to Materials (= Seminar) *Introduction to Materials*	4 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider	
Contents: Varying topics for each year, giving an overview into scope, application, requirements and preparation of all types of modern materials.	
Learning Outcomes / Competences: The students: • know the major principles, applications and processes of modern materials, • acquire the competence to compile knowledge for examples of material specific topics and to present this knowledge in given time to an audience.	
Remarks: **COMPULSORY MODULE**	
Workload: Total: 120 h	

Conditions: Recommended: basic knowledge in materials science		**Credit Requirements:** regular participation, oral presentation with term paper (30 - 45 minutes)
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 2	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Introduction to Materials (Seminar)
Mode of Instruction: seminar
Language: English
Contact Hours: 2

Literature:

Examination Prerequisites:
Introduction to Materials

Module PHM-0159: Laboratory Project *Laboratory Project*	10 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer	
Contents: Experimental or theoretical work in a laboratory / research group in the Institute of Physics. Has to be conducted within 3 months.	
Learning Outcomes / Competences: The students: • know the basic terms, skills and concepts to pursuit a real research project in the existing laboratories within the research groups, • experience the day to day life in a research group from within, • prepare themselves to conduct a research project during their Masters thesis.	
Remarks: The Laboratory Project will be offered in SoSe 2020 as soon as the current situation allows. **COMPULSORY MODULE**	
Workload: Total: 300 h	
Conditions: Recommended: solid knowledge in (solid state) Physics, Chemistry and Materials Science, both experimentally and theoretically	**Credit Requirements:** 1 written report (editing time 2 weeks)

Frequency: each semester Siehe Bemerkungen	**Recommended Semester:** from 3.	**Minimal Duration of the Module:** 0 semester[s]
Contact Hours: 8	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination Prerequisites:
Laboratory Project

Module PHM-0057: Physics of Thin Films *Physics of Thin Films*	6 ECTS/LP
Version 1.6.0 (since WS09/10) Person responsible for module: PD Dr. German Hammerl	

Contents:

- Thin film growth: basics, thermodynamic considerations, surface kinetics, growth mechanisms
- Thin film growth techniques: vacuum technology, physical vapor deposition, chemical vapor deposition
- Analysis and characterization of thin films: in-sit methods, ex-situ methods, direct methods
- Properties and applications of thin films

Learning Outcomes / Competences:

The students:

- know a broad spectrum of methods of thin film technology and material properties and applications of thin films,
- have the competence to deal with current problems in the field of thin film technology largely autonomous,
- are able to choose the right substrates and thin film materials for epitaxial thin film growth to achieve desired application conditions,
- aquire skills of combining the various technologies for growing thin layers with respect to their properties and applications, and
- aquire scientific soft skills to search for scientific literature, unterstand technical english, work with literature in the field of thin films, interpret experimental results.

Workload:

Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)

Conditions: none		
Frequency: each winter semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

written exam / length of examination: 90 minutes

Examination Prerequisites:

Physics of Thin Films

Module PHM-0058: Organic Semiconductors *Organic Semiconductors*	6 ECTS/LP
Version 1.3.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Brütting	

Contents:

Basic concepts and applications of organic semiconductors

Introduction

- Materials and preparation
- Structural properties
- Electronic structure
- Optical and electrical properties

Devices and Applications

- Organic metals
- Light-emitting diodes
- Solar cells
- Field-effect transistors

Learning Outcomes / Competences:

The students:

- know the basic structural and electronic properties of organic semiconductors as well as the essential function of organic semiconductor devices,
- have acquired skills for the classification of the materials taking into account their specific features in the functioning of components,
- and have the competence to comprehend and attend to current problems in the field of organic electronics.
- Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to interpret experimental results

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
40 h studying of course content through exercises / case studies (self-study)
40 h studying of course content using provided materials (self-study)
40 h studying of course content using literarture (self-study)

Conditions: It is strongly recommended to complete the module solid-state physics first. In addition, knowledge of molecular physics is desired.		
Frequency: annually	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module PHM-0060: Low Temperature Physics *Low Temperature Physics*		6 ECTS/LP
Version 1.1.0 (since WS09/10) Person responsible for module: Prof. Dr. Philipp Gegenwart		
Contents: • Introduction • Properties of matter at low temperatures • Cryoliquids and superfluidity • Cryogenic engineering • Thermometry • Quantum transport, criticality and entanglement in matter		
Learning Outcomes / Competences: The students: • know the basic properties of matter at low temperatures and the corresponding experimental techniques, • have acquired the theoretical knowledge to perform low-temperature measurements, • and know how to experimentally investigate current problems in low-temperature physics.		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Physik IV - Solid-state physics		
Frequency: every 3rd semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Low Temperature Physics **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3
Learning Outcome: see module description

Contents:

- Introduction (temperature scale, history of low temperature physics)
- Properties of matter at low temperatures (specific heat, thermal expansion, electrical resistance, thermal conductivity)
- Cryoliquids and superfluidity (nitrogen, hydrogen, 4-He and 3-He: phase diagrams, superfluidity)
- Cryogenic engineering (liquefaction of gases, helium cryostats, dilution refrigerator, adiabatic demagnetization, further techniques)
- Thermometry (primary and secondary thermometers at different temperature regimes)
- Quantum Matter (quantum Transport, Quantum phase transitions, Quantum spin liquids)

Literature:

oral exam / length of examination: 30 minutes
Examination Prerequisites:
Low Temperature Physics

Module PHM-0066: Superconductivity *Superconductivity*	6 ECTS/LP
Version 1.0.0 (since WS11/12) Person responsible for module: Prof. Dr. Philipp Gegenwart	

Contents:

- Introductory Remarks and Literature
- History and Main Properties of the Superconducting State, an Overview
- Phenomenological Thermodynamics and Electrodynamics of the SC
- Ginzburg-Landau Theory
- Microscopic Theories
- Fundamental Experiments on the Nature of the Superconducting State
- Josephson-Effects
- High Temperature Superconductors
- Application of Superconductivity

Learning Outcomes / Competences:

The students:

- will get an introduction to superconductivity,
- by a presentation of experimental results they will learn the fundamental properties of the superconducting state,
- are informed about the most important technical applications of superconductivity.
- Special attention will be drawn to the basic concepts of the main phenomeno-logical and microscopic theories of the superconducting state, to explain the experimental observations.
- For self-studies a comprehensive list of further reading will be supplied.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:

- Physik IV – Solid-state physics
- Theoretical physics I-III

Frequency: every 3rd semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Superconductivity

oral exam / length of examination: 30 minutes

Examination Prerequisites:

Superconductivity

Module PHM-0252: Optical Excitations in Materials *Optical Excitations in Materials*	6 ECTS/LP
Version 1.9.0 (since SoSe20) Person responsible for module: Prof. Dr. Joachim Deisenhofer	

Contents:

1. Classical Light-Matter Interation in Solids:

- Introduction: Typical Optical Response of Metals and Semiconductors
- Classical electromagnetic wave propagation in linear optical media (Maxwell Equations, refractive index, reflection, transmission, absorption)
- Anisotropic media, birefringence, longitudinal solutions
- Classical Drude-Lorentz oscillator model
- Spectroscopic techniques: Fourier-Transform-Spectroscopy, Time-domain Spectroscopy, Ellipsometry

2. Quantum Aspects of Light-Matter interaction

- qm approach to absorption and emission: Lorentzian lineshape, Fermi's Golden Rule
- Electric-dipole and magnetic-dipole approximation
- Rabi-oscillations and the need for quantum optical approaches
- A glimpse of non-linear optics

3. Exitations in different material classes

- Optical properties of semiconductors/insulators, molecular materials, metals
- Absorption and Luminescence, excitons, luminescence centers
- Optoelectronics, detectors, light emitting devices
- Quantum confined structures: tuning of absorption and emission

Learning Outcomes / Competences:

- The students gain basic knowledge of the fundamental concepts of light-matter interaction in solids.
- The students have detailed knowledge of classical models of light-propagation and absorption and get the competence to choose adequate spectroscopic techniques for measuring the optical properties of different material classes.
- The students have a basic understanding of quantum aspects of optical processes in different materials.
- The students are able apply these concepts to understand and analyse optical properties of different materials.
- The students acquire scientific skills to search for scientific literature and to evaluate scientific content.

Workload:

Total: 180 h
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions: Basic knowledge of classical electrodynamics, atomic and solid state physics.	

Frequency: each semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Optical Excitations in Materials (lecture)

Examination

Optical Excitations in Materials

written exam / length of examination: 90 minutes

Module PHM-0253: Dielectric Materials *Dielectric Materials*	6 ECTS/LP
Version 1.2.0 (since SoSe20) Person responsible for module: PD Dr. Peter Lunkenheimer	

Contents:

- Experimental techniques: quantities, broadband dielectric spectroscopy, nonlinear and polarization measurements
- Dynamic processes in dielectric materials: relaxation processes, phenomenological models
- Dielectric properties of disordered matter: liquids, glasses, plastic crystals
- Charge transport: hopping conductivity, universal dielectric response
- Ionic conductivity: conductivity mechanism, dielectric properties, advanced electrolytes for energy-storage devices
- Maxwell-Wagner relaxations: equivalent-circuits, applications (supercapacitors), colossal-dielectric-constant materials
- Electroceramics: Materials, Properties (relaxor ferroelectric, ferroelectric, antiferroelectric and multiferroic), Applications

Learning Outcomes / Competences:
Students know the fundamentals of electromagnetic wave propagation and have a sound background for a broad spectrum of dielectric phenomena. They are able to analyze materials requirements and to interpret dielectric spectra in a broad frequency range. They have the competence to select materials for different kinds of applications and to critically assess experimental results on dielectric properties.

Remarks:
Elective compulsory module

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions: Basic knowledge of solid state physics		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module PHM-0051: Biophysics and Biomaterials *Biophysics and Biomaterials*	6 ECTS/LP

Version 1.1.0 (since SoSe22)
Person responsible for module: Dr. Stefan Thalhammer
Westerhausen, Christoph, Dr.

Contents:

- Transcription and translation
- Membranes
- DNA and proteins
- Enabling technologies
- Microfluidics
- Radiation Biophysics

Learning Outcomes / Competences:

The students know:

· basic terms, concepts and phenomena of biological physics

· models of the (bio)polymer-theory, microfluidics, radiation biophysics, nanobiotechnology, sequencing strategies, membranes and proteins

The students obtain skills

· for independent processing of problems and dealing with current literature.

· to translate a biological observation into a physical question.

The students improve the key competences:

· self-dependent working with English specialist literature.

· processing and interpretation of experimental data.

· interdisciplinary thinking and working.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)

Biophysics and Biomaterials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Biophysics and Biomaterials

Module PHM-0059: Magnetism *Magnetism*	6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Dr. Hans-Albrecht Krug von Nidda	

Contents:

- History, basics
- Magnetic moments, classical and quantum phenomenology
- Exchange interaction and mean-field theory
- Magnetic anisotropy and magnetoelastic effects
- Thermodynamics of magnetic systems and applications
- Magnetic domains and domain walls
- Magnetization processes and micro magnetic treatment
- AC susceptibility and ESR
- Spintransport / spintronics
- Recent problems of magnetism

Learning Outcomes / Competences:

The students:

- know the basic properties and phenomena of magnetic materials and the most important methods and concepts for their description, like mean-field theory, exchange interactions and micro magnetic models,
- have the ability to classify different magnetic phenomena and to apply the corresponding models for their interpretation, and
- have the competence independently to treat fundamental and typical topics and problems of magnetism.
- Integrated acquirement of soft skills.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions: basics of solid-state physics and quantum mechanics

Module PHM-0048: Physics and Technology of Semiconductor Devices *Physics and Technology of Semiconductor Devices*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: apl. Prof. Dr. Helmut Karl

Contents:

1. Basic properties of semiconductors (electronic bandstructure, doping, carrier excitations and carrier transport)
2. Semiconductor diodes and transistors
3. Semiconductor technology

Learning Outcomes / Competences:

- Basic knowledge of solid-state and semiconductor physics such as electronic bandstructure, doping, carrier excitations, and carrier transport.
- Application of developed concepts (effective mass, quasi-Fermi levels) to describe the basic properties of semiconductors.
- Application of these concepts to describe and understand the operation principles of semiconductor devices such as diodes and transistors
- Knowledge of the technologically relevant methods and tools in semiconductor micro- and nanofabrication.
- Integrated acquisition of soft skills: autonomous working with specialist literature in English, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.

Workload:
Total: 180 h
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
60 h lecture and exercise course (attendance)

Conditions:

Examination

Physics and Technology of Semiconductor Devices

written exam / length of examination: 90 minutes

Examination Prerequisites:

Physics and Technology of Semiconductor Devices

Module PHM-0049: Nanostructures / Nanophysics *Nanostructures / Nanophysics*	6 ECTS/LP

Version 1.2.0 (since WS09/10)
Person responsible for module: Prof. Dr. István Kézsmárki

Contents:

1. Semiconductor quantum wells, wires and dots, low dimensional electron systems
2. Magnetotransport in low-dimensional systems, Quantum-Hall-Effect, Quantized conductance
3. Optical properties of nanostructures and their application in modern optoelectonic devices, Nanophotonics
4. Fabrication and detection techniques of nanostructures
5. Ferroic properties of nanostructures (Ferroelectricity, Magnetism, Multiferroicity)

Learning Outcomes / Competences:

- The students gain basic knowledge of the fundamental concepts in modern nanoscale science.
- The students have detailed knowledge of low-dimensional semiconductor structures and how these systems can be applied for novel functional devices for high-frequency electronics and optoelectronics
- The students gain competence in selecting different fabrication and characterization approaches for specific nanostructures.
- The students are able apply these concepts to tackle present problems in nanophysics.
- The students acquire scientific skills to search for scientific literature and to evaluate scientific content.

Workload:
Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)

Nanostructures / Nanophysics

Module PHM-0203: Physics of Cells

Physics of Cells

6 ECTS/LP

Version 1.3.0 (since SoSe22)
Person responsible for module: Dr. Christoph Westerhausen

Contents:

- Physical principles in Biology
- Cell components and their material properties: cell membrane, organelles, cytoskeleton
- Thermodynamics of proteins and biological membranes
- Physical methods and techniques for studying cells
- Cell adhesion – interplay of specific, universal and elastic forces
- Tensile strength and elasticity of tissue - macromolecules of the extra cellular matrix
- Micro mechanics and properties of the cell as a biomaterial
- Cell adhesion
- Cell migration
- Cell actuation, cell-computer-communication, and cell stimulatiion

Learning Outcomes / Competences:

The students

- know basic physical properties of human cells, as building blocks of living organisms and their material properties.
- know the basic functionality of mechanical and optical methods to study living cells
- know physical descriptions of fundamental biological processes and properties of biomaterials.
- are able to express biophysical questions and define model systems to answer these questions.

The students improve the key competences:

- self-dependent working with English specialist literature.
- processing of experimental data.
- interdisciplinary thinking and working.

Workload:

60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)

Physics of Cells (Tutorial) (exercise course)

Examination
Physics of Cells
oral exam / length of examination: 30 minutes

Module PHM-0054: Chemical Physics II *Chemical Physics II*	6 ECTS/LP
Version 1.3.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Scherer PD Dr. Georg Eickerling	
Contents: • Introduction to computational chemistry • Hartree-Fock Theory • DFT in a nutshell • Prediction of reaction mechanisms • calculation of physical and chemical properties	
Learning Outcomes / Competences: The students: • know the basic quantum chemical methods of chemical physics to interpret the electronic structures in molecules and solid-state compounds, • have therefore the competence to autonomously perform simple quantum chemical calculations using Hartree-Fock and Density Functional Theory (DFT) and to interpret the electronic structure of functional molecules and materials with regard to their chemical and physical properties • Integrated acquirement of soft skills: ability to specialize in a scientific topic and to apply the acquired knowledge for solving scientific problems.	
Remarks: It is possible for students to do quantum chemical calculations autonomously and analyze electronical structures of molecules on a computer cluster within the scope of the tutorial.	
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study)	
Conditions: It is highly recommended to complete the module Chemical Physics I first.	

Frequency: each summer semester not in summer term 23	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Chemical Physics II **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3
Learning Outcome: see module description

Literature:

- I. N. Levine, Quantum Chemistry, Pearson, 7th ed **2013**.
- A. Szabo, N. S. Ostlund, Modern Quantum Chemistry, Dover, **1996** (EbookCentral ebook).

Part of the Module: Chemical Physics II (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Learning Outcome:

see module description

Examination

Chemical Physics II

written exam / length of examination: 90 minutes

Examination Prerequisites:

Chemical Physics II

Module PHM-0161: Coordination Materials *Coordination Materials*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer
Dr. Hana Bunzen

Contents:

A) Basics of coordination Chemistry

- Historical development of coordination chemistry [2]
- Structures and nomenclature rules [2]
- Chemical bonds in transition metal coordination compounds [3]
- Stability of transition metal coordination compounds [2]
- Characteristic reactions [3]

B) Selected classes of functional materials

- Bioinorganic chemistry [3]
- Coordination polymers / metal-organic frameworks [3]
- Coordination compounds in medical applications [3]
- Photochemistry of coordination compounds [3]

Learning Outcomes / Competences:

The students

- shall acquire knowledge about concepts of chemical bonding in coordination chemistry (main emphasis: d-block transition metal compounds),
- broaden their capabilities to interpret UV/vis absorption spectra and to predict stability and reactivity of coordination compounds,
- learn how to transfer concepts of coordination chemistry onto topics of materials sciences.
- Integrated acquirement of soft skills.

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions:
Recommended: The lecture course is based on the courses "Chemistry I", "Chemistry II"

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Coordination Materials
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Literature:

- Joan Ribas Gisbert, Coordination Chemistry, Wiley-VCH
- Lutz H. Gade, Koordinationschemie, Wiley-VCH
- As well as selected reviews and journals articles cited on the slides

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Examination

Coordination Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Coordination Materials

Module PHM-0113: Advanced Solid State Materials *Advanced Solid State Materials*		6 ECTS/LP
Version 1.0.0 (since WS10/11) Person responsible for module: Prof. Dr. Henning Höppe		
Contents: • Repitition of concepts • Novel silicate-analogous materials • Luminescent materials • Pigments • Heterogeneous catalysis		
Learning Outcomes / Competences: • The students are aware of correlations between composition, structures and properties of functional materials, • acquire skills to predict the properties of chemical compounds, based on their composition and structures, • gain competence to evaluate the potential of functional materials for future technological developments, and • will know how to measure the properties of these materials. • Integrated acquirement of soft skills		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study)		
Conditions: Contents of the modules Chemie I, and Chemie II or Festkörperchemie (Bachelor Physik, Bachelor Materialwissenschaften)		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Advanced Solid State Materials **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3
Learning Outcome: see module description
Contents: see module description
Literature: • A. West, Solid State Chemistry and Its Applications • L. Smart, E. Moore, Solid State Chemistry • Scripts Solid State Chemistry and Chemistry I and II

Part of the Module: Advanced Solid State Materials (Tutorial)
Mode of Instruction: exercise course
Language: English

Examination
Advanced Solid State Materials
written exam / length of examination: 90 minutes
Examination Prerequisites:
Advanced Solid State Materials

Module PHM-0217: Advanced X-ray and Neutron Diffraction Techniques *Advanced X-ray and Neutron Diffraction Techniques*	6 ECTS/LP

Version 1.0.0 (since SoSe17)
Person responsible for module: Prof. Dr. Wolfgang Scherer
PD Dr. Georg Eickerling

Contents:
Subjects of the lecture are advanced X-ray and neutron diffraction techniques:

- The failure of the standard *I*ndependent *A*tom *M*odel (IAM) in X-ray diffraction
- Beyond the standard model: The multipolar model
- How to obtain and analyze experimental charge densities
- How to derive chemical and physical properties from diffraction data
- Applications of joined X-ray and neutron diffraction experiments

Learning Outcomes / Competences:
The students:

- gain basic theoretical knowledge on the reconstruction of accurate electron density maps from X-ray and neutron diffraction data
- know the basics of the *Quantum Theory of Atoms in Molecules*
- are competent to analyze the topology of the electron density and correlate it with the physical and chemical properties of materials

Remarks:
ELECTIVE COMPULSORY MODULE

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Assigned Courses:

Advanced X-ray and Neutron Diffraction Techniques (Tutorial) (exercise course)

Examination

Advanced X-ray and Neutron Diffraction Techniques

written exam / length of examination: 90 minutes

Examination Prerequisites:

Advanced X-ray and Neutron Diffraction Techniques

Module PHM-0114: Porous Functional Materials *Porous Functional Materials*	6 ECTS/LP
Version 1.0.0 (since SS11 to WS22/23) Person responsible for module: Prof. Dr. Dirk Volkmer	

Contents:

- Overview and historical developments
- Structural families of porous frameworks
- Synthesis strategies
- Adsorption and diffusion
- Thermal analysis methods
- Catalytic properties
- Advanced applications and current trends

Learning Outcomes / Competences:

- The students shall acquire knowledge about design principles and synthesis of porous functional materials,
- broaden their capabilities to characterize porous solid state materials with special emphasis laid upon sorption and thermal analysis,
- become introduced into typical technical applications of porous solids.
- Integrated acquirement of soft skills

Remarks:
This module and the exams for this module will be offered in WS 2022/23 for the last time !

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions: participation in the course Materials Chemistry		**Credit Requirements:** one written examination, 90 min
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Porous Functional Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Porous Functional Materials

Module PHM-0218: Novel Methods in Solid State NMR Spectroscopy *Novel Methods in Solid State NMR Spectroscopy*	6 ECTS/LP

Version 1.0.0 (since SoSe17)
Person responsible for module: Prof. Dr. Leo van Wüllen

Contents:

The physical basis of nuclear magnetic resonance

Pulsed NMR methods; Fourier Transform NMR

Internal interactions

Magic Angle Spinning

Modern pulse sequences or how to obtain specific information about the structure and dynamics of solid materials

Recent highlights of the application of modern solid state NMR in materials science

Workload:
Total: 180 h

Conditions: none		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Novel Methods in Solid State NMR Spectroscopy

Novel Methods in Solid State NMR spectroscopy (tutorial) (exercise course)

Examination
Novel Methods in Solid State NMR Spectroscopy
written exam / length of examination: 90 minutes

Module PHM-0167: Oxidation and Corrosion *Oxidation and Corrosion*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Ferdinand Haider

Contents:

Introduction

Review of thermodynamics

Chemical equilibria

Electrochemistry

Electrode kinetics

High temperature oxidation

Localized corrosion

- Shallow pit corrosion
- Pitting corrosion
- Crevice corrosion
- Intercrystalline corrosion
- Stress corrosion cracking
- Fatigue corrosion
- Erosion corrosion
- Galvanic corrosion

Water and seawater corrosion

Corrosion monitoring

Corrosion properties of specific materials

Specific corrosion problems in certain branches

- Oil and Gas industry
- Automobile industry
- Food industry

Corrosion protection

- Passive layers
- Reaction layers (Diffusion layers …)
- Coatings (organic, inorganic)
- Cathodic, anodic protection
- Inhibitors

Learning Outcomes / Competences:

The students:

- know the the fundamental basics, mechanics, types of corrosion processes and their electrochemical explanation
- obtain the skill to understand typical electrochemical quantification of corrosion processes.
- aquire the competence to assess corrosion phenomena from typical damage patterns

Remarks:

Scheduled every second summer semster.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)

120 h studying of course content using provided materials (self-study)		
Conditions: Recommended: good knowledge in materials science, basic knowledge in physical chemistry		**Credit Requirements:** written exam (90 min)
Frequency: each summer semester alternating with PHM-0168	**Recommended Semester:** from 3.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination Prerequisites:
Oxidation and Corrosion

Module PHM-0264: Functional and Smart Macromolecular Materials	6 ECTS/LP

Version 1.2.0 (since WS21/22)
Person responsible for module: PD Dr. Klaus Ruhland

Contents:

Electro-active polymeric materials

- Intrinsically electric conducting polymers (ICPs)
- Working principles of ICPs in selected applications
- Red/Ox-responsive ICPs
- Electrochromism
- Electroactive Actuators
- Non-electric-conducting electrically functional polymers
- Ferroelectric polymers
- Piezoelectric polymers
- Dielectric elastomers

Thermo-active polymeric materials

- Difference between invertibility and reversibility
- Pyro-electric effect vs electro-caloric effect
- High-temperature-stabile polymers
- Thermochromic polymers

Mechano-active polymeric materials

- Shape-Memory-polymers
- Self-healing polymers

Photo-active polymeric materials

- Important chromophors and switching mechanisms
- Photo-responsive polymerization initiators and catalysts

Smart polymer gels

- Thermo-responsive polymer gels (LCST/UCST)
- Electrically charged polymer gels
- pH-responsive polymer gels

Learning Outcomes / Competences:

The Students get to know which functional properties can be implemented into macromolecular marterials by action of which external stimulus.

They reach the ability to differentiate between different mechanisms to introduce smart behaviour into polymeric materials and to decide about dependences between different external stimuli.

They will be competent to design smart functional multi-resonsive macromolecular materials that serve specific application needs time- and space-dependent.

Examples for applications of this type of material design will be discussed.

Workload:

Total: 180 h
80 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture (attendance)
20 h exercise course (attendance)

Conditions:	**Credit Requirements:**
none	passing the final examination

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Assigned Courses:

Functional and Smart Macromolecular Materials (lecture)

Examination
Functional and Smart Macromolecular Materials
written exam / length of examination: 90 minutes

Module MRM-0126: Ceramic Matrix Composites

Keramische Faserverbundwerkstoffe

6 ECTS/LP

Version 3.0.0 (since WS21/22)
Person responsible for module: Prof. Dr.-Ing. Dietmar Koch

Contents:

- Introduction in ceramic matrix composites
- Basics of processing of technical ceramics
- Processing chain of ceramic matrix composites (CMC) from raw materials to product
- Processing and properties of ceramic fibers
- Principal mechanisms of reinforcement in CMC
- Properties of CMC
- Application of CMC

Learning Outcomes / Competences:

- The students know the basic concepts of mechanical behavior of ceramic matrix composites
- The students have the competence to explain processing of ceramic fibers and ceramic matrix composites and describe their specific properties
- The students know the Weibull statistics which describe the fiber strength distribution
- The students know how to describe mechanical interactions between fiber and matrix
- The students get the knowledge of application of ceramic matrix composites and are able to choose the according material for specific application.
- The students acquire scientific skills to search for scientific literature and to evaluate scientific content

Workload:
Total: 180 h
120 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions:		**Credit Requirements:**
Recommended: basic knowledge of materials		Bestehen der Modulprüfung

Module PHM-0164: Characterization of Composite Materials

Characterization of Composite Materials

6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Markus Sause

Contents:
The following topics are presented:

- Introduction to composite materials
- Applications of composite materials
- Mechanical testing
- Thermophysical testing
- Nondestructive testing

Learning Outcomes / Competences:
The students:

- acquire knowledge in the field of materials testing and evaluation of composite materials.
- are introduced to important concepts in measurement techniques, and material models applied to composites.
- are able to independently acquire further information of the scientific topic using various forms of information.

Workload:
Total: 180 h
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)

Conditions:
Recommended: basic knowledge in materials science, particularly in composite materials

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Characterization of Composite Materials
written exam / length of examination: 90 minutes
Examination Prerequisites:
Characterization of Composite Materials

Module PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties *Fiber Reinforced Composites: Processing and Materials Properties*	6 ECTS/LP
Version 1.2.0 (since SoSe15) Person responsible for module: Dr. Judith Moosburger-Will	
Contents: • Production of fibers (e.g. glass, carbon, or ceramic fibers) • Physical and chemical properties of fibers and their precursor materials • Physical and chemical properties of commonly used polymeric and ceramic matrix materials • Semi-finished products • Composite production technologies • Application of fiber reinforced materials	
Learning Outcomes / Competences: The students: • know the physical and chemical properties of fibers, matrices, and fiber-reinforced materials. • know the basics of production technologies of fibers, polymeric, ceramic matrices, and fiber-reinforced materials. • know the application areas of composite materials. • have the competence to explain material properties of fibers, matrices, and composites. • have the competence to choose the right materials according to application relevant conditions. • are able to independently acquire further knowledge of the scientific topic using various forms of information.	
Remarks: **ELECTIVE COMPULSORY MODULE**	
Workload: Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)	
Conditions: Recommended: basic knowledge in materials science, basic lectures in organic chemistry	

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Functional Polymers

written exam / length of examination: 90 minutes

Examination Prerequisites:

Functional Polymers

Module PHM-0122: Non-Destructive Testing *Non-Destructive Testing*	6 ECTS/LP
Version 1.0.0 (since WS14/15) Person responsible for module: Prof. Dr. Markus Sause	

Contents:

- Introduction to nondestructive testing methods
- Visual inspection
- Ultrasonic testing
- Guided wave testing
- Acoustic emission analysis
- Thermography
- Radiography
- Eddy current testing
- Specialized nondestructive methods

Learning Outcomes / Competences:

The students

- acquire knowledge in the field of nondestructive evaluation of materials,
- are introduced to important concepts in nondestructive measurement techniques,
- are able to independently acquire further knowledge of the scientific topic using various forms of information.
- Integrated acquirement of soft skills

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions: Basic knowledge on materials science, in particular composite materials		
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Non-Destructive Testing
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:
see module description

Contents:
see module description

Literature:

- Raj: Practical Non-destructive Testing
- Shull: Nondestructive Evaluation - Theory and Applications
- Krautkrämer: Ultrasonic testing of materials
- Grosse: Acoustic Emission Testing
- Rose: Ultrasonic waves in solid media
- Maldague: Nondestructive Evaluation of Materials by Infrared Thermography
- Herman: Fundamentals of Computerized Tomography

Further literature - actual scientific papers and reviews - will be announced at the beginning of the lecture.

Assigned Courses:

Non-Destructive Testing (lecture)

Part of the Module: Non-Destructive Testing (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Assigned Courses:

Non-Destructive Testing (Tutorial) (exercise course)

Examination

Non-Destructive Testing

written exam / length of examination: 90 minutes

Examination Prerequisites:

Non-Destructive Testing

Module PHM-0168: Modern Metallic Materials *Modern Metallic Materials*		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider		
Contents: Introduction Review of physical metallurgy Steels: • principles • common alloying elements • martensitic transformations • dual phase steels • TRIP and TWIP steels • maraging steel • electrical steel • production and processing Aluminium alloys: • 2xxx • 6xxx • 7xxx • Processing – creep forming, hydroforming, spinforming Titanium alloys Magnesium alloys Superalloys Intermetallics, high entropy alloys		
Learning Outcomes / Competences: Students • learn about relevant classes of actual metallic alloys and their properties • aquire the skill to derive alloy properties from physical metallurgy principles and concepts • have the competence to choose and to explain appropriate metallic materials for special applications		
Remarks: Scheduled every second summer semster.		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Recommended: Knowledge of physical metallurgy and physical chemistry		
Frequency: each summer semester alternating with PHM-0167	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Modern Metallic Materials

Mode of Instruction: lecture

Language: English

Contact Hours: 4

Literature:

Cahn-Haasen-Kramer: Materials Science and Technology

Original literature

Examination

Modern Metallic Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Modern Metallic Materials

Module PHM-0196: Surfaces and Interfaces II: Joining processes *Surfaces and Interfaces II: Joining processes*	6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: Dr. Judith Moosburger-Will	

Learning Outcomes / Competences:

The students

- know the application areas of composite materials
- know the basics of cohesion and adhesion
- know the basics of joining techniques
- are introduced to physical and chemical properties metal-metal, metal-polymer and polymer-polymer interfaces
- Are able to independently acquire further knowledge of the scientific topic using various forms of information.

Workload:

Total: 180 h

Conditions:	**Credit Requirements:**
Basic knowledge on materials science, lecture "Surfaces and Interfaces I" Module Surfaces and Interfaces (PHM-0117) - recommended	Bestehen der Modulprüfung

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Surfaces and Interfaces II: Joining processes

Mode of Instruction: lecture

Lecturers: Prof. Dr. Siegfried Horn

Language: German

Contact Hours: 3

Contents:

The following topics are treated:

- Introduction to adhesion
- Role of surface and interface properties
- Introduction to interactions at surfaces and interfaces
- Adhesion theories
- Surface and interface energy
- Surface treatment techniques
- Joining techniques
- Physical and chemical properties of joints
- Applications

Lehr-/Lernmethoden:

Lecture: Beamer presentation and Blackboard

Exercise: Exercises on recent topics, specialization of lecture contents

Literature:

Literature, including actual scientific papers and reviews, will be announced at the beginning of the lecture.

Examination

Surfaces and Interfaces II: Joining processes

written exam / length of examination: 90 minutes

Examination Prerequisites:

Surfaces and Interfaces II: Joining processes

Parts of the Module

Part of the Module: Übung zu Surfaces and Interfaces II: Joining processes

Mode of Instruction: exercise course

Language: German

Contact Hours: 1

Module MRM-0136: Mechanical Characterization of Materials *Mechanical Characterization of Materials*	6 ECTS/LP
Version 1.1.0 (since SoSe21) Person responsible for module: Prof. Dr. Markus Sause	

Contents:

The following topics are presented:

- Introduction to material characterization
- Linear material behaviour
- Non-linear material behaviour
- Material failure
- Measurement technologies
- Tensile testing
- Compression testing
- Shear testing
- Other static testing concepts
- Fracture mechanics
- Assembly testing
- Surface mechanics
- Creep testing
- Fatigue testing
- High-Velocity testing
- Component testing

Learning Outcomes / Competences:

The students:

- Acquire knowledge in the field of materials testing and evaluation of materials.
- Are introduced to important concepts in measurement techniques, and material models.
- Are able to independently acquire further knowledge of the scientific topic using various forms of information.

Workload:

Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)

Conditions: None		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]

Module MRM-0112: Finite element modeling of multiphysics phenomena

Finite-Elemente-Modellierung von Multiphysik-Phänomenen

6 ECTS/LP

Version 2.9.0 (since WS19/20)
Person responsible for module: Prof. Dr. Markus Sause
Dozenten: Prof. Dr. Sause / Prof. Dr Peter

Learning Outcomes / Competences:
The students

- get to know existing numerical methods for modeling and simulation of physical processes and systems
- Learn the use and application of numerical methods for realistic problems
- Are able to apply basic functional principles of a FEM program by using "COMSOL Multiphysics".

Remarks:
This module is offered by faculty from MRM and Mathematics. It is intended for physics, MSE and WING students, who want to get an insight into a modern FEM program as it is used in academic and industrial applications.

Workload:
Total: 180 h

Conditions:		**Credit Requirements:**
Recommended: MTH-6110 - Numerische Verfahren für Materialwissenschaftler, Physiker und Wirtschaftsingenieure		Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Finite-Elemente-Modellierung von Multiphysik-Phänomenen
Mode of Instruction: lecture
Lecturers: Prof. Dr. Malte Peter, Prof. Dr. Markus Sause
Language: German
Contact Hours: 2

Contents:
The following content will be presented:

- Modeling and simulation of physical processes and systems.
- Basic concepts of FEM programs
- Generation of meshes
- Optimization strategies
- Selection of solver lgorithms
- Example applications from electrodynamics
- Example applications from thermodynamics
- Example applications from continuum mechanics
- Example applications from fluid dynamics
- Coupling of differential equations for the solution of multiphysics phenomena

Lehr-/Lernmethoden:
Slide presentation, classroom discussion

Finite-Elemente-Modellierung von Multiphysik-Phänomenen

written/oral exam / length of examination: 60 minutes

Parts of the Module

Part of the Module: Übung zu Finite-Elemente-Modellierung von Multiphysik-Phänomenen

Mode of Instruction: exercise course

Language: German

Contact Hours: 2

Lehr-/Lernmethoden:

Independent reflection of topics to deepen the lecture content

Module MRM-0126: Ceramic Matrix Composites *Keramische Faserverbundwerkstoffe*	6 ECTS/LP
Version 3.0.0 (since WS21/22) Person responsible for module: Prof. Dr.-Ing. Dietmar Koch	

Contents:

- Introduction in ceramic matrix composites
- Basics of processing of technical ceramics
- Processing chain of ceramic matrix composites (CMC) from raw materials to product
- Processing and properties of ceramic fibers
- Principal mechanisms of reinforcement in CMC
- Properties of CMC
- Application of CMC

Learning Outcomes / Competences:

- The students know the basic concepts of mechanical behavior of ceramic matrix composites
- The students have the competence to explain processing of ceramic fibers and ceramic matrix composites and describe their specific properties
- The students know the Weibull statistics which describe the fiber strength distribution
- The students know how to describe mechanical interactions between fiber and matrix
- The students get the knowledge of application of ceramic matrix composites and are able to choose the according material for specific application.
- The students acquire scientific skills to search for scientific literature and to evaluate scientific content

Workload:
Total: 180 h
120 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions: Recommended: basic knowledge of materials		**Credit Requirements:** Bestehen der Modulprüfung

Module MRM-0142: Complex 3D Structures and Components from 2D Materials *Complex 3D Structures and Components from 2D Materials*	6 ECTS/LP

Version 1.0.0
Person responsible for module: Prof. Dr.-Ing. Suelen Barg

Contents:
Introduction:

- Complex Materials in Nature
- Motivations in assembling 2D Materials in 3D with an overview of their demands for future technological applications (from energy to aerospace)

Nano and 2D Materials:

- Introduction to nano and 2D Materials
- Scaling laws and the evolution of properties with size
- Graphene structure, properties, and characterization
- 2D Transition Metal Carbides (MXenes)
- 2D Materials synthesis routes: top-down and bottom-up approaches

From 2D to 3D:

- Motivations, Challenges, and opportunities
- Colloidal processing routes with 2D Materials: Principles of wet processing
- Self-assembly, templating, and additive manufacturing (AM) routes
- Extrusion-based AM with 2D Materials
- Functionalities and Applications
- Aerogel supports for functional composite development
- 3D architectures for energy storage

Learning Outcomes / Competences:
By completing this unit, the students should be able to:

Knowledge and understanding:

- Define the classes of nanomaterials depending on their dimensionality.
- Identify the different families of 2D materials beyond graphene, including transition metal dichalcogenides (TMDs), carbides and/or nitrides (MXenes).
- Summarize top-down and bottom-up synthesis strategies towards 2D materials.
- Select appropriate syntheses routes for a given application based on property requirements and cost efficiency of the approach.
- Explain the basic principles, advantages and disadvantages of innovative colloidal processing routes applied to 2D materials-based 3D structures.

Intellectual skills:

- Solve problems involving the evolution of properties with size in nanomaterials by the application of simple spherical cluster approximation models.
- Evaluate the effect of microstructure and composition to develop new materials properties and/or control device efficiency using real examples from the literature.

Transferable and practical skills:

- Evaluate English language scientific content in the specialist literature.
- Apply analytical methods to solve problems.

Workload:
Total: 180 h

Conditions: materials science basic knowledge		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each winter semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Complex 3D Structures and Components from 2D Materials

Mode of Instruction: lecture
Lecturers: Prof. Dr.-Ing. Suelen Barg
Language: English

Examination

Complex 3D Structures and Components from 2D Materials

written exam, written exam / length of examination: 1 hours

Module PHM-0252: Optical Excitations in Materials *Optical Excitations in Materials*	6 ECTS/LP
Version 1.9.0 (since SoSe20) Person responsible for module: Prof. Dr. Joachim Deisenhofer	

Contents:

1. Classical Light-Matter Interation in Solids:

- Introduction: Typical Optical Response of Metals and Semiconductors
- Classical electromagnetic wave propagation in linear optical media (Maxwell Equations, refractive index, reflection, transmission, absorption)
- Anisotropic media, birefringence, longitudinal solutions
- Classical Drude-Lorentz oscillator model
- Spectroscopic techniques: Fourier-Transform-Spectroscopy, Time-domain Spectroscopy, Ellipsometry

2. Quantum Aspects of Light-Matter interaction

- qm approach to absorption and emission: Lorentzian lineshape, Fermi's Golden Rule
- Electric-dipole and magnetic-dipole approximation
- Rabi-oscillations and the need for quantum optical approaches
- A glimpse of non-linear optics

3. Exitations in different material classes

- Optical properties of semiconductors/insulators, molecular materials, metals
- Absorption and Luminescence, excitons, luminescence centers
- Optoelectronics, detectors, light emitting devices
- Quantum confined structures: tuning of absorption and emission

Learning Outcomes / Competences:

- The students gain basic knowledge of the fundamental concepts of light-matter interaction in solids.
- The students have detailed knowledge of classical models of light-propagation and absorption and get the competence to choose adequate spectroscopic techniques for measuring the optical properties of different material classes.
- The students have a basic understanding of quantum aspects of optical processes in different materials.
- The students are able apply these concepts to understand and analyse optical properties of different materials.
- The students acquire scientific skills to search for scientific literature and to evaluate scientific content.

Workload:

Total: 180 h
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions: Basic knowledge of classical electrodynamics, atomic and solid state physics.	

Frequency: each semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Optical Excitations in Materials

Mode of Instruction: lecture

Language: English

Contact Hours: 4

ECTS Credits: 6.0

Literature:

2. Mark Fox, Quantum Optics: An Introduction, Oxford Master Series
3. David B. Tanner, Optical Effects in Solids, Cambridge University Press
4. Y. Toyozawa, Optical Processes in Solids, Cambridge University Press

Assigned Courses:

Optical Excitations in Materials (lecture)

Examination

Optical Excitations in Materials

written exam / length of examination: 90 minutes

Module PHM-0253: Dielectric Materials *Dielectric Materials*	6 ECTS/LP
Version 1.2.0 (since SoSe20) Person responsible for module: PD Dr. Peter Lunkenheimer	

Contents:

- Experimental techniques: quantities, broadband dielectric spectroscopy, nonlinear and polarization measurements
- Dynamic processes in dielectric materials: relaxation processes, phenomenological models
- Dielectric properties of disordered matter: liquids, glasses, plastic crystals
- Charge transport: hopping conductivity, universal dielectric response
- Ionic conductivity: conductivity mechanism, dielectric properties, advanced electrolytes for energy-storage devices
- Maxwell-Wagner relaxations: equivalent-circuits, applications (supercapacitors), colossal-dielectric-constant materials
- Electroceramics: Materials, Properties (relaxor ferroelectric, ferroelectric, antiferroelectric and multiferroic), Applications

Learning Outcomes / Competences:
Students know the fundamentals of electromagnetic wave propagation and have a sound background for a broad spectrum of dielectric phenomena. They are able to analyze materials requirements and to interpret dielectric spectra in a broad frequency range. They have the competence to select materials for different kinds of applications and to critically assess experimental results on dielectric properties.

Remarks:
Elective compulsory module

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions: Basic knowledge of solid state physics		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Dielectric Materials Dielectric Materials

presentation / length of examination: 45 minutes

Examination Prerequisites:

Dielectric Materials

Module PHM-0297: Method Course: Methods in Bioanalytics *Method Course: Methods in Bioanalytics*	8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. Janina Bahnemann	

Contents:

- Basic concepts of instrumental analytics, sensor technology, validation, quality assurance
- Biological basics for sensor design and sample components
- Biological markers, biomaterials and targets: bioreceptors: antibodies, enzymes, aptamers, cells, nanoparticles
- Sensor principles / transducers: optical, thermal, electrochemical, electromechanical, colorimetric
- Sensor materials (e.g., silicon, gold, plastics, polymers)
- Immobilization of bioreceptors on sensor materials
- Lateral flow assays, Point-of-Care diagnostics
- Carbohydrate and lipid analysis: Chromatographic methods (HPLC, GC, DC, MS)
- Amino acid analytics: HPLC, fluorescence spectroscopy
- Nucleic acid analytics: PCR method, sequencing, electrophoresis, microarrays
- Protein analytics: Chromatography, electrophoresis, spectroscopy, Bradford assay
- Cell analytics: Flow cytometry and microscopy
- Concepts and materials for sensor development and optimization:

  e.g., Microfluidics, additive manufacturing, nanoporous materials, nanoparticles, amplifiers

Learning Outcomes / Competences:

- Students will be able to use acquired analytical expertise to adequately describe and correlate basic principles of bioanalysis and their applications.
- Students will be able to transfer acquired knowledge from the lecture to practical applications in the experimental practical course.
- Students will demonstrate self-competence of work organization as well as social competence by working in small groups.
- Students will learn to identify proteins using various analytical methods, to set up biosensors for measuring glucose concentrations, and to scientifically evaluate, comprehensibly record in writing, and present the practical results.

Remarks:

ELECTIVE COMPULSORY MODULE

Number of students will be limited to 9.

Workload:

Total: 240 h

Conditions: keine / none		**Credit Requirements:** Practical work and written report
Frequency: nach Bedarf WS und SoSe	**Recommended Semester:** 1. - 4.	**Minimal Duration of the Module:** 1 semester[s]

Module PHM-0298: Method course: From macroscopic to microscopic ferroic properties *Method course: From macroscopic to microscopic ferroic properties*	8 ECTS/LP

Version 1.0.0 (since WS22/23)
Person responsible for module: Prof. Dr. István Kézsmárki

Contents:
Within this course, the students will learn the basic concepts of ferroic properties, e.g. ferroelectricity and ferromagnetism, which play a key role in materials science and engineering, at cryogenic temperatures. This method course will teach the students to understand and perform experiments on ferroic materials first, on a macroscopic scale and, after having a fundamental understanding, microscopic measurements. Therefore, the students will be taught in preparing single crystals, planning complex measurement procedures, and evaluating the measured data.

Magnetic Properties will be investigated via:

- Magnetization measurements
- Susceptibility measurements
- Magnetic force microscopy (MFM)

Electric Properties will be investigated via:

- Linear and non-linear dielectric spectroscopy
- SEM / EDX
- Polarization measurements
- Conductive atomic force microscopy (cAFM) / piezo force microscopy (PFM)

Learning Outcomes / Competences:

- fundamental knowledge of properties in electric and magnetic materials
- instruction in experimental methods for investigation of ferroic properties of condensed matter
- perform experiments at cryogenic temperatures
- trained in planning and performing complex experiments
- learn to evaluate and analyze the collected data
- combining knowledge of macroscopic measurements to understand microscopic data to fully understand electric and magnetic properties

Remarks:
ELECTIVE COMPULSORY MODULES

Workload:
Total: 240 h

Conditions: Recommended: basic knowledge in solid state physics and ferroic properties		**Credit Requirements:** Participation in laboratory course and oral examination.
Frequency: each semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module PHM-0166: Carbon-based functional Materials (Carboterials) *Carbon-based functional Materials (Carboterials)*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer

Contents:

1. Introduction to carbon allotropes and porous carbon materials [4]
2. Physical properties of fullerenes, carbon nanotubes and graphene [4]
3. Solid state NMR spectroscopy of carbon materials [4]
4. Metal carbides [4]
5. Carbon thin films and coatings [4]
6. Manufacturing and processing technology of carbon fibres [4]
7. Carbon-fibre reinforced polymer composites [4]
8. Carbon-fibre reinforced aluminium (Metal Matrix Composites, MMC) [4]
9. Energy storage in carbon materials [4]
10. Carbon-based materials for opto-electronics [4]
11. Quantum transport phenomena relating to carbon materials [4]
12. a) Manipulating heat flow with carbon-based electronic analogs: phononics in place of electronics [2]
12. b) Carbon-based spintronics [2]
13. Fabrication and processing of carbon-based nanostructures [4]

Learning Outcomes / Competences:

The students:

- know the basics of the chemistry and physics of carbon materials and their applications,
- acquire knowledge about the structural characterization, physical properties and engineering of functional materials and carbon based devices,
- learn to work with specialist literature in english.

Workload:

Total: 180 h
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
60 h lecture and exercise course (attendance)

Conditions: none

Part of the Module: Carbon-based functional Materials (Carboterials)
Mode of Instruction: lecture
Language: English
Contact Hours: 4

Literature:
will be announced by the lecturers

Examination
Carbon-based functional Materials (Carboterials)
written exam / length of examination: 120 minutes
Examination Prerequisites:
Carbon-based functional Materials (Carboterials)

Module PHM-0174: Theoretical Concepts and Simulation *Theoretical Concepts and Simulation*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Liviu Chioncel

Contents:

1. Introduction: operating systems, programming languages, data visualization tools
2. Basic numerical methods: interpolation, integration
3. Ordinary and Partial Differential Equations (e.g., diffusion equation, Schrödinger equation)
4. Molecular dynamics
5. Monte Carlo simulations

Learning Outcomes / Competences:
The students:

- know the principal concepts of thermodynamics and statistical physics as well as the numerical methods relevant in material science,
- are able to solve simple problems numerically. They are able to write the codes and to present the results,
- have the expertise to find the numerical method appropriate for the given problem and to judge the quality and validity of the numerical results,
- Integrated acquirement of soft skills: independent handling of hard- and software while using English documentations, ability to investigate abstract circumstances with the help of a computer and present the results in written and oral form, capacity for teamwork.

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:	**Credit Requirements:**
Recommended: basic knowledge of quantum mechanics, thermodynamics, and numerical methods as well as of a programming language	project work in small groups, including a written summary of the results (ca. 10-20 pages) as well as an oral presentation

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Theoretical Concepts and Simulation

Mode of Instruction: lecture

Language: English

Contact Hours: 3

Literature:

- Tao Pang, An Introduction to Computational Physics (Cambridge University Press)
- J. M. Thijssen, Computational Physics (Cambridge University Press)
- Koonin, Meredith, Computational Physics (Addison-Weseley)
- D. C. Rapaport, The Art of Molecular Dynamics Simulation, (Cambridge University Press)
- W. H. Press et al, Numerical Recipes (Cambridge University Press)

Part of the Module: Theoretical Concepts and Simulation (Project)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Examination

Theoretical Concepts and Simulation

seminar / length of examination: 30 minutes

Examination Prerequisites:

Theoretical Concepts and Simulation

Module PHM-0058: Organic Semiconductors *Organic Semiconductors*		6 ECTS/LP
Version 1.3.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Brütting		
Contents: Basic concepts and applications of organic semiconductors Introduction • Materials and preparation • Structural properties • Electronic structure • Optical and electrical properties Devices and Applications • Organic metals • Light-emitting diodes • Solar cells • Field-effect transistors		
Learning Outcomes / Competences: The students: • know the basic structural and electronic properties of organic semiconductors as well as the essential function of organic semiconductor devices, • have acquired skills for the classification of the materials taking into account their specific features in the functioning of components, • and have the competence to comprehend and attend to current problems in the field of organic electronics. • Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to interpret experimental results		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 40 h studying of course content through exercises / case studies (self-study) 40 h studying of course content using provided materials (self-study) 40 h studying of course content using literarture (self-study)		
Conditions: It is strongly recommended to complete the module solid-state physics first. In addition, knowledge of molecular physics is desired.		
Frequency: annually	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Organic Semiconductors **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3

Learning Outcome:

Part of the Module: Organic Semiconductors (Tutorial)
Mode of Instruction: exercise course
Language: English
Frequency: every 3rd semester
Contact Hours: 1

Examination
Organic Semiconductors
written exam / length of examination: 90 minutes
Examination Prerequisites:
Organic Semiconductors

Module PHM-0066: Superconductivity *Superconductivity*	6 ECTS/LP
Version 1.0.0 (since WS11/12) Person responsible for module: Prof. Dr. Philipp Gegenwart	

Contents:

- Introductory Remarks and Literature
- History and Main Properties of the Superconducting State, an Overview
- Phenomenological Thermodynamics and Electrodynamics of the SC
- Ginzburg-Landau Theory
- Microscopic Theories
- Fundamental Experiments on the Nature of the Superconducting State
- Josephson-Effects
- High Temperature Superconductors
- Application of Superconductivity

Learning Outcomes / Competences:

The students:

- will get an introduction to superconductivity,
- by a presentation of experimental results they will learn the fundamental properties of the superconducting state,
- are informed about the most important technical applications of superconductivity.
- Special attention will be drawn to the basic concepts of the main phenomeno-logical and microscopic theories of the superconducting state, to explain the experimental observations.
- For self-studies a comprehensive list of further reading will be supplied.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:

- Physik IV – Solid-state physics
- Theoretical physics I-III

Frequency: every 3rd semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Assigned Courses:

Superconductivity (lecture)

**(online/digital) **

Examination

Superconductivity

oral exam / length of examination: 30 minutes

Examination Prerequisites:

Superconductivity

Module PHM-0060: Low Temperature Physics *Low Temperature Physics*	6 ECTS/LP
Version 1.1.0 (since WS09/10) Person responsible for module: Prof. Dr. Philipp Gegenwart	

Contents:

- Introduction
- Properties of matter at low temperatures
- Cryoliquids and superfluidity
- Cryogenic engineering
- Thermometry
- Quantum transport, criticality and entanglement in matter

Learning Outcomes / Competences:
The students:

- know the basic properties of matter at low temperatures and the corresponding experimental techniques,
- have acquired the theoretical knowledge to perform low-temperature measurements,
- and know how to experimentally investigate current problems in low-temperature physics.

Workload:
Total: 180 h
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)

Conditions: Physik IV - Solid-state physics		
Frequency: every 3rd semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Low Temperature Physics
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:
see module description

Contents:

- Introduction (temperature scale, history of low temperature physics)
- Properties of matter at low temperatures (specific heat, thermal expansion, electrical resistance, thermal conductivity)
- Cryoliquids and superfluidity (nitrogen, hydrogen, 4-He and 3-He: phase diagrams, superfluidity)
- Cryogenic engineering (liquefaction of gases, helium cryostats, dilution refrigerator, adiabatic demagnetization, further techniques)
- Thermometry (primary and secondary thermometers at different temperature regimes)
- Quantum Matter (quantum Transport, Quantum phase transitions, Quantum spin liquids)

Literature:

C. Enss, S. Hunklinger, Tieftemperaturphysik (Springer)
F. Pobell, Matter and Methods at Low Temperatures (Springer)

Part of the Module: Low Temperature Physics (Tutorial)
Mode of Instruction: exercise course
Language: English
Contact Hours: 1

Examination
Low Temperature Physics
oral exam / length of examination: 30 minutes
Examination Prerequisites:
Low Temperature Physics

Module PHM-0114: Porous Functional Materials

Porous Functional Materials

6 ECTS/LP

Version 1.0.0 (since SS11 to WS22/23)
Person responsible for module: Prof. Dr. Dirk Volkmer

Contents:

- Overview and historical developments
- Structural families of porous frameworks
- Synthesis strategies
- Adsorption and diffusion
- Thermal analysis methods
- Catalytic properties
- Advanced applications and current trends

Learning Outcomes / Competences:

- The students shall acquire knowledge about design principles and synthesis of porous functional materials,
- broaden their capabilities to characterize porous solid state materials with special emphasis laid upon sorption and thermal analysis,
- become introduced into typical technical applications of porous solids.
- Integrated acquirement of soft skills

Remarks:
This module and the exams for this module will be offered in WS 2022/23 for the last time !

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:		**Credit Requirements:**
participation in the course Materials Chemistry		one written examination, 90 min
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Porous Functional Materials
Mode of Instruction: lecture
Language: English
Contact Hours: 4

Contents:
see module description

Literature:

- Paul A. Wright, Microporous Framework Solids (RSC Materials Monographs, 2008)
- selected reviews and journal articles cited on the slides

Assigned Courses:

Porous Functional Materials (lecture)

Examination

Porous Functional Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Porous Functional Materials

Module PHM-0068: Spintronics

Spintronics

6 ECTS/LP

Version 1.7.0 (since SoSe14)
Person responsible for module: PD Dr. German Hammerl

Contents:

- Basic micromagnetic interactions (exchange, anisotropy, DMI, stray fields, external fields) and where they come from
- Emergence of spin textures such as domain walls and bubbles/skyrmions
- Torques acting on the local magnetization (magnetic field torque, current in-plane spin-transfer torque, spin-Hall effect and spin-orbit torques)
- Switching
- Motion of spin textures, 1D model and Thiele equation
- Magneto-resistance and Hall effects and their utility in electrical readout
- Ultrafast effects
- Device applications
- Experimental techniques in the field of spintronics

Learning Outcomes / Competences:

The students:

- know the fundamental interactions in magnetic materials, the basic spintronic effects, and the related device structures,
- have the competence to deal with current problems in the field of spintronics largely autonomously,
- are able to choose materials in order to achieve demanding properties in spintronic applications,
- are able to design device components to achieve spin polarization,
- acquire scientific skills in finding and understanding current literature dealing with spintronic devices and applications, identifying suitable materials and material combinations with respect to their applicability for spintronic devices.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)

Conditions:

none

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Language: English

Contact Hours: 1

Examination

Spintronics

written exam / length of examination: 90 minutes

Examination Prerequisites:

Spintronics

Module PHM-0057: Physics of Thin Films *Physics of Thin Films*	6 ECTS/LP
Version 1.6.0 (since WS09/10) Person responsible for module: PD Dr. German Hammerl	

Contents:

- Thin film growth: basics, thermodynamic considerations, surface kinetics, growth mechanisms
- Thin film growth techniques: vacuum technology, physical vapor deposition, chemical vapor deposition
- Analysis and characterization of thin films: in-sit methods, ex-situ methods, direct methods
- Properties and applications of thin films

Learning Outcomes / Competences:

The students:

- know a broad spectrum of methods of thin film technology and material properties and applications of thin films,
- have the competence to deal with current problems in the field of thin film technology largely autonomous,
- are able to choose the right substrates and thin film materials for epitaxial thin film growth to achieve desired application conditions,
- aquire skills of combining the various technologies for growing thin layers with respect to their properties and applications, and
- aquire scientific soft skills to search for scientific literature, unterstand technical english, work with literature in the field of thin films, interpret experimental results.

Workload:

Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)

Conditions: none

Examination

Physics of Thin Films

written exam / length of examination: 90 minutes

Examination Prerequisites:

Physics of Thin Films

Module PHM-0056: Ion-Solid Interaction *Ion-Solid Interaction*		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: apl. Prof. Dr. Helmut Karl		
Contents: • Introduction (areas of scientific and technological application, principles) • Fundamentals of atomic collision processes (scattering, cross-sections, energy loss models, potentials in binary collision models) • Ion-induced modification of solids (integrated circuit fabrication with emphasis on ion induced phenomena, ion implantation, radiation damage, ion milling and etching (RIE), sputtering, erosion, deposition) • Transport phenomena • Analysis with ion beams		
Learning Outcomes / Competences: The students: • know the physical principles and the basical mechanisms of the interaction between particles and solid state bodies in the energy range of eV to MeV, • are able to choose adequate physical models for specific technological and scientific applications, and • have the competence to work extensively autonomous on problems concerning the interaction between ions and solid state bodies. • Integrated acquirement of soft skills.		
Workload: Total: 180 h 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Basic Courses in Physics I–IV, Solid State Physics, Nuclear Physics		
Frequency: annually	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Ion-Solid Interaction

written exam / length of examination: 90 minutes

Examination Prerequisites:

Ion-Solid Interaction

Module PHM-0069: Applied Magnetic Materials and Methods

6 ECTS/LP

Applied Magnetic Materials and Methods

Version 1.1.0 (since WS14/15)
Person responsible for module: Prof. Dr. Manfred Albrecht

Contents:

- Basics of magnetism
- Ferrimagnets, permanent magnets
- Magnetic nanoparticles
- Superparamagnetism
- Exchange bias effect
- Magnetoresistance, sensors
- Experimental methods (e.g. Mößbauer Spectroscopy, mu-SR)

Learning Outcomes / Competences:

- The students know the basic terms and concepts of magnetism,
- get a profound understanding of basic physical relations and their applications,
- acquire the ability to describe qualitative observations, interpret quantitative measurements, and develop mathematical descriptions of physical effects of chosen magnetic material systems.
- Integrated acquirement of soft skills: autonomous working with specialist literature in English, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.

Workload:
Total: 180 h
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
60 h lecture and exercise course (attendance)

oral exam / length of examination: 30 minutes
Examination Prerequisites:
Applied Magnetic Materials and Methods

Module PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons *Solid State Spectroscopy with Synchrotron Radiation and Neutrons*	6 ECTS/LP

Version 1.2.0 (since WS09/10)
Person responsible for module: Prof. Dr. Christine Kuntscher

Contents:

1. Electromagnetic radiation: description, generation, detection [5]
2. Spectral analysis of electromagnetic radiation: monochromators, spectrometer, interferometer [2]
3. Excitations in the solid state: Dielectric function [2]
4. Infrared spectroscopy
5. Ellipsometry
6. Photoemission spectroscopy
7. X-ray absorption spectroscopy
8. Neutrons: Sources, detectors
9. Neutron scattering

Learning Outcomes / Competences:
The students:

- know the basics of spectroscopy and important instrumentation and methods,
- have acquired the skills of formulating a mathematical-physical ansatz in spectroscopy and can apply these in the field of solid state spectroscopy,
- have the competence to deal with current problems in solid state spectroscopy autonomously, and are able to judge proper measurement methods for application.
- Integrated acquirement of soft skills.

Workload:
Total: 180 h
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)

Conditions: basic knowledge in solid-state physics

Solid State Spectroscopy with Synchrotron Radiation and Neutrons

oral exam / length of examination: 30 minutes

Examination Prerequisites:

Solid State Spectroscopy with Synchrotron Radiation and Neutrons

Module PHM-0051: Biophysics and Biomaterials *Biophysics and Biomaterials*	6 ECTS/LP

Version 1.1.0 (since SoSe22)
Person responsible for module: Dr. Stefan Thalhammer
Westerhausen, Christoph, Dr.

Contents:

- Transcription and translation
- Membranes
- DNA and proteins
- Enabling technologies
- Microfluidics
- Radiation Biophysics

Learning Outcomes / Competences:
The students know:

· basic terms, concepts and phenomena of biological physics

· models of the (bio)polymer-theory, microfluidics, radiation biophysics, nanobiotechnology, sequencing strategies, membranes and proteins

The students obtain skills

· for independent processing of problems and dealing with current literature.

· to translate a biological observation into a physical question.

The students improve the key competences:

· self-dependent working with English specialist literature.

· processing and interpretation of experimental data.

· interdisciplinary thinking and working.

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)

Conditions: Mechanics, Thermodynamics, Statistical Physics

Examination

Biophysics and Biomaterials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Biophysics and Biomaterials

Module PHM-0059: Magnetism *Magnetism*	6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Dr. Hans-Albrecht Krug von Nidda	

Contents:

- History, basics
- Magnetic moments, classical and quantum phenomenology
- Exchange interaction and mean-field theory
- Magnetic anisotropy and magnetoelastic effects
- Thermodynamics of magnetic systems and applications
- Magnetic domains and domain walls
- Magnetization processes and micro magnetic treatment
- AC susceptibility and ESR
- Spintransport / spintronics
- Recent problems of magnetism

Learning Outcomes / Competences:

The students:

- know the basic properties and phenomena of magnetic materials and the most important methods and concepts for their description, like mean-field theory, exchange interactions and micro magnetic models,
- have the ability to classify different magnetic phenomena and to apply the corresponding models for their interpretation, and
- have the competence independently to treat fundamental and typical topics and problems of magnetism.
- Integrated acquirement of soft skills.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions: basics of solid-state physics and quantum mechanics		
Frequency: annually	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module PHM-0048: Physics and Technology of Semiconductor Devices *Physics and Technology of Semiconductor Devices*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: apl. Prof. Dr. Helmut Karl

Contents:

1. Basic properties of semiconductors (electronic bandstructure, doping, carrier excitations and carrier transport)
2. Semiconductor diodes and transistors
3. Semiconductor technology

Learning Outcomes / Competences:

- Basic knowledge of solid-state and semiconductor physics such as electronic bandstructure, doping, carrier excitations, and carrier transport.
- Application of developed concepts (effective mass, quasi-Fermi levels) to describe the basic properties of semiconductors.
- Application of these concepts to describe and understand the operation principles of semiconductor devices such as diodes and transistors
- Knowledge of the technologically relevant methods and tools in semiconductor micro- and nanofabrication.
- Integrated acquisition of soft skills: autonomous working with specialist literature in English, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.

Workload:
Total: 180 h
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
60 h lecture and exercise course (attendance)

Conditions:
recommended prerequisites: basic knowledge in solid state physics, statistical physics and quantum mechanics.

Examination

Physics and Technology of Semiconductor Devices

written exam / length of examination: 90 minutes

Examination Prerequisites:

Physics and Technology of Semiconductor Devices

Module PHM-0049: Nanostructures / Nanophysics *Nanostructures / Nanophysics*	6 ECTS/LP

Version 1.2.0 (since WS09/10)
Person responsible for module: Prof. Dr. István Kézsmárki

Contents:

1. Semiconductor quantum wells, wires and dots, low dimensional electron systems
2. Magnetotransport in low-dimensional systems, Quantum-Hall-Effect, Quantized conductance
3. Optical properties of nanostructures and their application in modern optoelectonic devices, Nanophotonics
4. Fabrication and detection techniques of nanostructures
5. Ferroic properties of nanostructures (Ferroelectricity, Magnetism, Multiferroicity)

Learning Outcomes / Competences:

- The students gain basic knowledge of the fundamental concepts in modern nanoscale science.
- The students have detailed knowledge of low-dimensional semiconductor structures and how these systems can be applied for novel functional devices for high-frequency electronics and optoelectronics
- The students gain competence in selecting different fabrication and characterization approaches for specific nanostructures.
- The students are able apply these concepts to tackle present problems in nanophysics.
- The students acquire scientific skills to search for scientific literature and to evaluate scientific content.

Workload:
Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)

Conditions: recommended prerequisites: basic knowledge in solid-state physics and quantum mechanics.		
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Nanostructures / Nanophysics
Mode of Instruction: lecture
Language: English
Contact Hours: 4

Nanostructures / Nanophysics

oral exam / length of examination: 30 minutes

Examination Prerequisites:

Nanostructures / Nanophysics

Module PHM-0054: Chemical Physics II *Chemical Physics II*	6 ECTS/LP
Version 1.3.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Scherer PD Dr. Georg Eickerling	
Contents: • Introduction to computational chemistry • Hartree-Fock Theory • DFT in a nutshell • Prediction of reaction mechanisms • calculation of physical and chemical properties	
Learning Outcomes / Competences: The students: • know the basic quantum chemical methods of chemical physics to interpret the electronic structures in molecules and solid-state compounds, • have therefore the competence to autonomously perform simple quantum chemical calculations using Hartree-Fock and Density Functional Theory (DFT) and to interpret the electronic structure of functional molecules and materials with regard to their chemical and physical properties • Integrated acquirement of soft skills: ability to specialize in a scientific topic and to apply the acquired knowledge for solving scientific problems.	
Remarks: It is possible for students to do quantum chemical calculations autonomously and analyze electronical structures of molecules on a computer cluster within the scope of the tutorial.	
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study)	
Conditions: It is highly recommended to complete the module Chemical Physics I first.	

Frequency: each summer semester not in summer term 23	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Chemical Physics II **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3
Learning Outcome: see module description

see module description

Examination

Chemical Physics II

written exam / length of examination: 90 minutes

Examination Prerequisites:

Chemical Physics II

Module PHM-0161: Coordination Materials *Coordination Materials*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer
Dr. Hana Bunzen

Contents:

A) Basics of coordination Chemistry

- Historical development of coordination chemistry [2]
- Structures and nomenclature rules [2]
- Chemical bonds in transition metal coordination compounds [3]
- Stability of transition metal coordination compounds [2]
- Characteristic reactions [3]

B) Selected classes of functional materials

- Bioinorganic chemistry [3]
- Coordination polymers / metal-organic frameworks [3]
- Coordination compounds in medical applications [3]
- Photochemistry of coordination compounds [3]

Learning Outcomes / Competences:

The students

- shall acquire knowledge about concepts of chemical bonding in coordination chemistry (main emphasis: d-block transition metal compounds),
- broaden their capabilities to interpret UV/vis absorption spectra and to predict stability and reactivity of coordination compounds,
- learn how to transfer concepts of coordination chemistry onto topics of materials sciences.
- Integrated acquirement of soft skills.

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions:
Recommended: The lecture course is based on the courses "Chemistry I", "Chemistry II"

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Language: English

Contact Hours: 1

Examination

Coordination Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Coordination Materials

Module PHM-0113: Advanced Solid State Materials *Advanced Solid State Materials*	6 ECTS/LP
Version 1.0.0 (since WS10/11) Person responsible for module: Prof. Dr. Henning Höppe	

Contents:

- Repitition of concepts
- Novel silicate-analogous materials
- Luminescent materials
- Pigments
- Heterogeneous catalysis

Learning Outcomes / Competences:

- The students are aware of correlations between composition, structures and properties of functional materials,
- acquire skills to predict the properties of chemical compounds, based on their composition and structures,
- gain competence to evaluate the potential of functional materials for future technological developments, and
- will know how to measure the properties of these materials.
- Integrated acquirement of soft skills

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)

Conditions: Contents of the modules Chemie I, and Chemie II or Festkörperchemie (Bachelor Physik, Bachelor Materialwissenschaften)		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination Prerequisites:
Advanced Solid State Materials

Module PHM-0218: Novel Methods in Solid State NMR Spectroscopy *Novel Methods in Solid State NMR Spectroscopy*	6 ECTS/LP

Version 1.0.0 (since SoSe17)
Person responsible for module: Prof. Dr. Leo van Wüllen

Contents:

The physical basis of nuclear magnetic resonance

Pulsed NMR methods; Fourier Transform NMR

Internal interactions

Magic Angle Spinning

Modern pulse sequences or how to obtain specific information about the structure and dynamics of solid materials

Recent highlights of the application of modern solid state NMR in materials science

Workload:
Total: 180 h

Conditions: none		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Novel Methods in Solid State NMR Spectroscopy

Novel Methods in Solid State NMR spectroscopy (tutorial) (exercise course)

Examination
Novel Methods in Solid State NMR Spectroscopy
written exam / length of examination: 90 minutes

Module PHM-0167: Oxidation and Corrosion *Oxidation and Corrosion*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Ferdinand Haider

Contents:

Introduction

Review of thermodynamics

Chemical equilibria

Electrochemistry

Electrode kinetics

High temperature oxidation

Localized corrosion

- Shallow pit corrosion
- Pitting corrosion
- Crevice corrosion
- Intercrystalline corrosion
- Stress corrosion cracking
- Fatigue corrosion
- Erosion corrosion
- Galvanic corrosion

Water and seawater corrosion

Corrosion monitoring

Corrosion properties of specific materials

Specific corrosion problems in certain branches

- Oil and Gas industry
- Automobile industry
- Food industry

Corrosion protection

- Passive layers
- Reaction layers (Diffusion layers …)
- Coatings (organic, inorganic)
- Cathodic, anodic protection
- Inhibitors

Learning Outcomes / Competences:

The students:

- know the the fundamental basics, mechanics, types of corrosion processes and their electrochemical explanation
- obtain the skill to understand typical electrochemical quantification of corrosion processes.
- aquire the competence to assess corrosion phenomena from typical damage patterns

Remarks:

Scheduled every second summer semster.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)

120 h studying of course content using provided materials (self-study)		
Conditions: Recommended: good knowledge in materials science, basic knowledge in physical chemistry		**Credit Requirements:** written exam (90 min)
Frequency: each summer semester alternating with PHM-0168	**Recommended Semester:** from 3.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination Prerequisites:
Oxidation and Corrosion

Module PHM-0164: Characterization of Composite Materials

Characterization of Composite Materials

6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Markus Sause

Contents:
The following topics are presented:

- Introduction to composite materials
- Applications of composite materials
- Mechanical testing
- Thermophysical testing
- Nondestructive testing

Learning Outcomes / Competences:
The students:

- acquire knowledge in the field of materials testing and evaluation of composite materials.
- are introduced to important concepts in measurement techniques, and material models applied to composites.
- are able to independently acquire further information of the scientific topic using various forms of information.

Workload:
Total: 180 h
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)

Conditions:
Recommended: basic knowledge in materials science, particularly in composite materials

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination
Characterization of Composite Materials
written exam / length of examination: 90 minutes
Examination Prerequisites:
Characterization of Composite Materials

Module PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties *Fiber Reinforced Composites: Processing and Materials Properties*	6 ECTS/LP
Version 1.2.0 (since SoSe15) Person responsible for module: Dr. Judith Moosburger-Will	

Contents:

- Production of fibers (e.g. glass, carbon, or ceramic fibers)
- Physical and chemical properties of fibers and their precursor materials
- Physical and chemical properties of commonly used polymeric and ceramic matrix materials
- Semi-finished products
- Composite production technologies
- Application of fiber reinforced materials

Learning Outcomes / Competences:

The students:

- know the physical and chemical properties of fibers, matrices, and fiber-reinforced materials.
- know the basics of production technologies of fibers, polymeric, ceramic matrices, and fiber-reinforced materials.
- know the application areas of composite materials.
- have the competence to explain material properties of fibers, matrices, and composites.
- have the competence to choose the right materials according to application relevant conditions.
- are able to independently acquire further knowledge of the scientific topic using various forms of information.

Module PHM-0165: Introduction to Mechanical Engineering *Introduction to Mechanical Engineering*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Siegfried Horn
Dr. - Ing. Johannes Schilp

Contents:
The following topics are treated:

- Statics and dynamics of objects
- Transmissions and mechanisms
- Tension, shear and bending moment
- Hydrostatics
- Hydrodynamics
- Strength of materials and solid mechanics
- Instrumentation and measurement
- Mechanical design (including kinematics and dynamics)

Learning Outcomes / Competences:
The students understand and are able to apply basic concepts of physics and materials science to:

- Engineering applications
- Mechanical testing
- Instrumentation
- Mechanical design

Workload:
Total: 180 h

written exam / length of examination: 90 minutes
Examination Prerequisites:
Introduction to Mechanical Engineering

Module MRM-0052: Functional Polymers		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: PD Dr. Klaus Ruhland		
Contents: • Introduction to polymer science • Elastomers and elastoplastic materials • Memory-shape polymers • Piezoelectric polymers • Electrically conducting polymers • Ion-conducting polymers • Magnetic polymers • Photoresponsive polymers • Polymers with second order non-linear optical properties • Polymeric catalysts • Self-healing polymers • Polymers in bio sciences>		
Learning Outcomes / Competences: The students learn how polymeric materials can be designed and applied to act in a smart manner on an external mechanical, magnetic, electric, optical, thermal or chemical impact.		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Recommended: Attendance to PHM-0035 (Chemie I), PHM-0036 (Chemie II) and MRM-0050 (Grundlagen der Polymerchemie und -physik)		
Frequency: irregular will not be offered in the next time	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Module PHM-0196: Surfaces and Interfaces II: Joining processes *Surfaces and Interfaces II: Joining processes*	6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: Dr. Judith Moosburger-Will	

Learning Outcomes / Competences:

The students

- know the application areas of composite materials
- know the basics of cohesion and adhesion
- know the basics of joining techniques
- are introduced to physical and chemical properties metal-metal, metal-polymer and polymer-polymer interfaces
- Are able to independently acquire further knowledge of the scientific topic using various forms of information.

Workload:

Total: 180 h

Conditions:	**Credit Requirements:**
Basic knowledge on materials science, lecture "Surfaces and Interfaces I" Module Surfaces and Interfaces (PHM-0117) - recommended	Bestehen der Modulprüfung

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Surfaces and Interfaces II: Joining processes

Mode of Instruction: lecture

Lecturers: Prof. Dr. Siegfried Horn

Language: German

Contact Hours: 3

Contents:

The following topics are treated:

- Introduction to adhesion
- Role of surface and interface properties
- Introduction to interactions at surfaces and interfaces
- Adhesion theories
- Surface and interface energy
- Surface treatment techniques
- Joining techniques
- Physical and chemical properties of joints
- Applications

Lehr-/Lernmethoden:

Lecture: Beamer presentation and Blackboard

Exercise: Exercises on recent topics, specialization of lecture contents

Literature:

Literature, including actual scientific papers and reviews, will be announced at the beginning of the lecture.

Examination

Surfaces and Interfaces II: Joining processes

written exam / length of examination: 90 minutes

Examination Prerequisites:

Surfaces and Interfaces II: Joining processes

Language: German

Contact Hours: 1

Module PHM-0122: Non-Destructive Testing *Non-Destructive Testing*	6 ECTS/LP
Version 1.0.0 (since WS14/15) Person responsible for module: Prof. Dr. Markus Sause	

Contents:

- Introduction to nondestructive testing methods
- Visual inspection
- Ultrasonic testing
- Guided wave testing
- Acoustic emission analysis
- Thermography
- Radiography
- Eddy current testing
- Specialized nondestructive methods

Learning Outcomes / Competences:

The students

- acquire knowledge in the field of nondestructive evaluation of materials,
- are introduced to important concepts in nondestructive measurement techniques,
- are able to independently acquire further knowledge of the scientific topic using various forms of information.
- Integrated acquirement of soft skills

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions: Basic knowledge on materials science, in particular composite materials

Module PHM-0203: Physics of Cells

Physics of Cells

6 ECTS/LP

Version 1.3.0 (since SoSe22)
Person responsible for module: Dr. Christoph Westerhausen

Contents:

- Physical principles in Biology
- Cell components and their material properties: cell membrane, organelles, cytoskeleton
- Thermodynamics of proteins and biological membranes
- Physical methods and techniques for studying cells
- Cell adhesion – interplay of specific, universal and elastic forces
- Tensile strength and elasticity of tissue - macromolecules of the extra cellular matrix
- Micro mechanics and properties of the cell as a biomaterial
- Cell adhesion
- Cell migration
- Cell actuation, cell-computer-communication, and cell stimulatiion

Learning Outcomes / Competences:

The students

- know basic physical properties of human cells, as building blocks of living organisms and their material properties.
- know the basic functionality of mechanical and optical methods to study living cells
- know physical descriptions of fundamental biological processes and properties of biomaterials.
- are able to express biophysical questions and define model systems to answer these questions.

The students improve the key competences:

- self-dependent working with English specialist literature.
- processing of experimental data.
- interdisciplinary thinking and working.

Workload:

60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions: Mechanics, Thermodynamics		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

oral exam / length of examination: 30 minutes

Module PHM-0117: Surfaces and Interfaces *Surfaces and Interfaces*	6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Manfred Albrecht	

Contents:

Introduction

- The importance of surfaces and interfaces

Some basic facts from solid state physics

- Crystal lattice and reciprocal lattice
- Electronic structure of solids
- Lattice dynamics

Physics at surfaces and interfaces

- Structure of ideal and real surfaces
- Relaxation and reconstruction
- Transport (diffusion, electronic) on interfaces
- Thermodynamics of interfaces
- Electronic structure of surfaces
- Chemical reactions on solid state surfaces (catalysis)
- Interface dominated materials (nano scale materials)

Methods to study chemical composition and electronic structure, application examples

- Scanning electron microscopy
- Scanning tunneling and scanning force microscopy
- Auger – electron – spectroscopy
- Photo electron spectroscopy

Learning Outcomes / Competences:

The students:

- have knowledge of the structure, the electronical properties, the thermodynamics, and the chemical reactions on surfaces and interfaces,
- acquire the skill to solve problems of fundamental research and applied sciences in the field of surface and interface physics,
- have the competence to solve certain problems autonomously based on the thought physical basics.
- Integrated acquirement of soft skills.

Workload:

Total: 180 h
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
60 h lecture and exercise course (attendance)

Conditions: The module "Physics IV - Solid State Physics" of the Bachelor of Physics / Materials Science program should be completed first.		
Frequency: each winter semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Surfaces and Interfaces
Mode of Instruction: lecture
Language: English
Frequency: annually
Contact Hours: 3

Learning Outcome:
see module description

Contents:
see module description

Literature:
- Ertl, Küppers: Low Energy Electrons and Surface Chemistry (VCH)

Frequency: annually
Contact Hours: 1

Assigned Courses:

Surfaces and Interfaces (Tutorial) (exercise course)
**(online/digital) **

Examination
Surfaces and Interfaces
written exam / length of examination: 90 minutes
Examination Prerequisites:
Surfaces and Interfaces

Module PHM-0053: Chemical Physics I *Chemical Physics I*	6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Scherer	
Contents: • Basics of quantum chemical methods • Molecular symmetry and group theory • The electronical structure of transition metal complexes	
Learning Outcomes / Competences: The students: • know the basics of the extended-Hückel-method and the density functional theory, • know the basics of group theory, • are able to apply the knowledge gained through consideration of symmetry from vibration-, NMR-, and UV/VIS-spectroscopy, and • are able to interpret and predict the basical geometric, electronical and magnetical properties of transition metal complexes. • Integrated acquirement of soft skills: ability to specialize in a scientific topic and to apply the acquired knowledge for solving scientific problems.	
Remarks: It is possible for students to do EHM calculations autonomously and analyze electronical structures of molecules on a computer cluster within the scope of the tutorial.	
Workload: Total: 180 h 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)	
Conditions: It is recommended to complete the experiments FP11 (IR-spectroscopy) and FP17 (Raman-spectroscopy) of the module "Physikalisches Fortgeschrittenenpraktikum".	

Frequency: each winter semester not in winter term 22/23	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Chemical Physics I **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3
Learning Outcome: see module description

Contents:

- Basics of quantum chemical methods
  - Extended Hueckel method (EHM)
  - Modern quantum chemical methods of chemical physics
  - Application: exemplary calculations and interpretation of simple electronical structures
- Molecular symmetry and group theory
  - Symmetry operations and matrix transformations
  - Point groups
  - Reducible and irreducible representations
  - Character tables
  - Application: infrared- and raman-spectroscopy, NMR-spectroscopy
- The electronical structure of transition metal complexes
  - Ligand field theory and angular-overlap model (AOM)
  - The physical basics of the spectrochemical series
  - Molecular orbital theory of transition metal complexes
  - Application: UV/VIS-spectroscopy, molecular magnetism

Literature:

- J. Reinhold, Quantentheorie der Moleküle (Teubner)

Examination

Chemical Physics I

written exam / length of examination: 90 minutes

Examination Prerequisites:

Chemical Physics I

Module PHM-0217: Advanced X-ray and Neutron Diffraction Techniques *Advanced X-ray and Neutron Diffraction Techniques*	6 ECTS/LP

Version 1.0.0 (since SoSe17)
Person responsible for module: Prof. Dr. Wolfgang Scherer
PD Dr. Georg Eickerling

Contents:
Subjects of the lecture are advanced X-ray and neutron diffraction techniques:

- The failure of the standard *I*ndependent *A*tom *M*odel (IAM) in X-ray diffraction
- Beyond the standard model: The multipolar model
- How to obtain and analyze experimental charge densities
- How to derive chemical and physical properties from diffraction data
- Applications of joined X-ray and neutron diffraction experiments

Learning Outcomes / Competences:
The students:

- gain basic theoretical knowledge on the reconstruction of accurate electron density maps from X-ray and neutron diffraction data
- know the basics of the *Quantum Theory of Atoms in Molecules*
- are competent to analyze the topology of the electron density and correlate it with the physical and chemical properties of materials

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 180 h
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)

Conditions: It is recommended to complete the Module PHM-0053 Chemical Physics I.		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

4. P. Coppens, X-ray Charge Densities and Chemical Bonding, Oxford Univ. Press, 1997.
5. P. Popelier, Atoms in Molecules: An Introduction, Longman, 1999.

Assigned Courses:

Advanced X-ray and Neutron Diffraction Techniques (lecture)

Part of the Module: Advanced X-ray and Neutron Diffraction Techniques (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Assigned Courses:

Advanced X-ray and Neutron Diffraction Techniques (Tutorial) (exercise course)

Examination

Advanced X-ray and Neutron Diffraction Techniques

written exam / length of examination: 90 minutes

Examination Prerequisites:

Advanced X-ray and Neutron Diffraction Techniques

Module PHM-0146: Method Course: Electronics for Physicists and Materials Scientists *Method Course: Electronics for Physicists and Materials Scientists*	8 ECTS/LP

Version 2.0.0 (since SoSe22)
Person responsible for module: Andreas Hörner

Contents:

1. Basics in electronic and electrical engineering
2. Quadrupole theory
3. Analog technique, transistor and opamp circuits
4. Boolean algebra and logic
5. Digital electronics and calculation circuits
6. Microprocessors and Networks
7. Basics in Electronic
8. Implementation of transistors
9. Operational amplifiers
10. Digital electronics
11. Practical circuit arrangement

Learning Outcomes / Competences:
The students:

- know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the laboratory,
- have skills in easy circuit design, measuring and control technology, analog and digital electronics,
- have expertise in independent working on circuit problems. They can calculate and develop easy circuits.

Remarks:
ELECTIVE COMPULSORY MODULE

Attendance in the **Method Course: Electronics for Physicists and Materials Scientists (combined lab course AND lecture)** excludes credit points for the lecture **Electronics for Physicists and Materials Scientists.**

Workload:
Total: 240 h
140 h studying of course content using provided materials (self-study)
60 h lecture (attendance)
10 h preparation of written term papers (self-study)
30 h internship / practical course (attendance)

Conditions: none		**Credit Requirements:** written report (one per group)
Frequency: each semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Electronics for Physicists and Materials Scientists
Mode of Instruction: lecture
Language: English
Contact Hours: 4

Literature:

- Paul Horowitz: The Art of Electronics (Cambridge University Press)
- National Instruments: MultiSim software package (available in lecture)

Assigned Courses:

Method Course: Electronics for Physicists and Materials Scientists (lecture)

Part of the Module: Method Course: Electronics for Physicists and Materials Scientists (Practical Course)

Mode of Instruction: laboratory course

Language: English

Contact Hours: 2

Assigned Courses:

Method Course: Electronics for Physicists and Materials Scientists (Practical Course) (internship)

Examination

Method Course: Electronics for Physicists and Materials Scientists

written exam / length of examination: 90 minutes

Module PHM-0148: Method Course: Optical Properties of Solids *Method Course: Optical Properties of Solids*	8 ECTS/LP

Version 1.4.0 (since SoSe15)
Person responsible for module: Prof. Dr. Joachim Deisenhofer

Contents:

Electrodynamics of solids

- Maxwell equations
- Electromagnetic waves
- Refraction and interference, Fresnel equations

FTIR spectroscopy

- Fourier transformation
- Michelson-Morley and Genzel interferometer
- Sources and detectors

Terahertz Time Domain spectroscopy

- Generation of pulsed THz radiation
- Gated detection, Austin switches

Elementary excitations in solid materials

- Rotational-vibrational bands
- Infrared-active phonons
- Interband excitations
- Crystal-field excitations

Learning Outcomes / Competences:

- The students know the basic principles of far-infrared spectroscopy and terahertz time-domain-spectroscopy,
- The students know about fundamental optical excitations in condensed matter materials that can be studied by these spectroscopic methods,
- The students obtain the competence to plan and carry out complex experiments,
- The students have the skills to evaluate and analyze optical data.
- The students acquire scientific skills to search for scientific literature and to evaluate scientific content.

Remarks:

Workload:

Total: 240 h
30 h studying of course content using provided materials (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)
90 h lecture and exercise course (attendance)

Conditions:	**Credit Requirements:**
Recommended: basic knowledge in solid-state physics, basic knowledge in electrodynamics and optics	written report

Frequency: each semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination
Method Course: Optical Properties of Solids

report

Examination Prerequisites:

Method Course: Optical Properties of Solids

Module PHM-0151: Method Course: Porous Materials - Synthesis and Characterization *Method Course: Porous Materials - Synthesis and Characterization*	8 ECTS/LP

Version 1.0.0 (since SoSe15 to WS21/22)
Person responsible for module: Prof. Dr. Dirk Volkmer

Contents:
Synthesis of porous functional materials (e.g. aerogels, mesoporous silica materials, zeolites, Metal-Organic Frameworks)

Characterization methods

- Structure and composition (XRD, UV/VIS, IR, ESEM, EDX)
- Thermal analysis (TGA)
- Adsorption and diffusion (BET, pore size distribution, pulse chemisorption)
- Catalytic properties (GC/MS, TPO, TPR)

Learning Outcomes / Competences:
The students will learn how to

- use modern solid state preparation techniques (e.g. hydrothermal, solvothermal, microwave synthesis),
- employ analytical methods dedicated to porous materials.

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 240 h
120 h internship / practical course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:	**Credit Requirements:**
Recommended: lecture Functional Porous Materials	written report (editing time 3 weeks) + written exam Please note that final grade of the Method Course consists of the maximum point score of of the exam and the grade of the report of the practical part which are weighted (40:60).

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Porous Materials Synthesis and Characterization (Practical Course)
Mode of Instruction: laboratory course
Language: English
Contact Hours: 4

Examination

Method Course: Porous Materials Synthesis and Characterization

written exam / length of examination: 45 minutes

Examination Prerequisites:

Method Course: Porous Materials Synthesis and Characterization

Module PHM-0147: Method Course: Electron Microscopy *Method Course: Electron Microscopy*	8 ECTS/LP

Version 1.3.0 (since SoSe15)
Person responsible for module: Prof. Dr. Ferdinand Haider

Contents:

Scanning electron microscopy (SEM)

- Electron optical components
- Detectors
- EDX, EBSD

Transmission electron microscopy (TEM)

- Diffraction
- Contrast mechanisms
- High resolution EM
- Scanning TEM
- Analytical TEM
- Aberration correction

Learning Outcomes / Competences:

The students:

- get introduced to the basics of scanning electron microscopy and transmission electron microscopy, using lectures to teach the theoretical basics, which are afterwards deepened using practical courses,
- are able to operate SEM and TEM on a basic level
- are able to characterize materials using different electron microscopy techniques
- Aquire the competence to decide about a technique feasible for a certain problem.
- aquire the competence to assess EM images, also regarding artefacts
- learn to search for scientific literature and to formulate a scientific report

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 240 h
90 h lecture and exercise course (attendance)
150 h studying of course content using provided materials (self-study)

Conditions:	**Credit Requirements:**
Recommended: knowledge of solid-state physics, reciprocal lattice	regular participation, oral presentation (10 min), written report (one report per group)

Frequency: each summer semester	**Recommended Semester:**	**Minimal Duration of the Module:**
	from 2.	1 semester[s]
Contact Hours:	**Repeat Exams Permitted:**	
6	according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Electron Microscopy
Mode of Instruction: lecture
Language: English
Contact Hours: 2

Contents:

SEM:

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

TEM:

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM

Contact Hours: 4

Examination

Method Course: Electron Microscopy

report

Examination Prerequisites:

Method Course: Electron Microscopy

Module PHM-0149: Method Course: Methods in Biophysics

8 ECTS/LP

Method Course: Methods in Biophysics

Version 2.0.0 (since SoSe22)
Person responsible for module: Dr. Christoph Westerhausen

Contents:

Unit Membrane biophysics

- Preparation of synthetic lipid membranes
- Size, fluorescence and phase transition characterization of lipid membranes
- Nanoparticle uptake synthetic membrane

Unit microfluidic

- Microfluidic systems
- Fabrication of microfluidic systems
- Calculation of microfluidic problems

Unit live cell experiments

- Cell culture
- Cell couting and separation using microfluidics

Unit analysis

Learning Outcomes / Competences:

The students:

- know basic terms, concepts and phenomena in biophysics
- acquire basic knowledge of fluidic and biophysical phenomena on small length scales and applications and technologies of microfluidic manipulation and analysis systems,
- learn skills in tissue culture and immun-histochemical staining procedures,
- learn skills in fluorescence microscopy,
- learn skills to calculate fluidic problems on small length scales,
- learn skills to handle microfluidic channel systems.

Module PHM-0153: Method Course: Magnetic and Superconducting Materials *Method Course: Magnetic and Superconducting Materials*	8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Philipp Gegenwart

Contents:
Methods of growth and characterization:

Sample preparation (bulk materials and thin films), e.g.,

- arcmelting
- flux-growth
- sputtering and evaporation

Sample characterization, e.g.,

- X-ray diffraction
- electron microscopy, scanning tunneling microscopy
- magnetic susceptibility, electrical resistivity
- specific heat

Learning Outcomes / Competences:
The students

- get to know the basic methods of materials growth and characterization, such as poly- and single crystal growth, thin-film growth, X-ray diffraction, magnetic susceptibility, dc-conductivity, and specific heat measurements
- are trained in planning and performing complex experiments
- learn to evaluate and analyze the collected data, are taught to work on problems in experimental solid state physics, including analysis of measurement results and their interpretation in the framework of models and theories

Workload:
Total: 240 h
90 h lecture and exercise course (attendance)
30 h studying of course content using provided materials (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)

Conditions: Recommended: basic knowledge in solid state physics and quantum mechanics		**Credit Requirements:** presentation and written report on the experiments (editing time 3 weeks, max. 30 pages)
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]

Module PHM-0154: Method Course: Modern Solid State NMR Spectroscopy *Method Course: Modern Solid State NMR Spectroscopy*	8 ECTS/LP
Version 2.0.0 (since SoSe17) Person responsible for module: Prof. Dr. Leo van Wüllen	

Contents:

Physical foundations of NMR spectroscopy

Internal interactions in NMR spectroscopy

- Chemical shift interaction
- Dipole interaction and
- Quadrupolar interaction

Magic Angle Spinning techniques

Modern applications of NMR in materials science

Experimental work at the Solid-State NMR spectrometers, computer-aided analysis and interpretation of acquired data

Learning Outcomes / Competences:

The students:

- gain basic knowledge of the physical foundations of modern Solid-State NMR spectroscopy,
- gain basic practical knowledge of operating a solid-state NMR spectrometer,
- can -- under guidance -- plan, perform, and analyze modern solid-state NMR experiments for the structural characterization of advanced materials.

Remarks:

Examination

Method Course: Modern Solid State NMR Spectroscopy

report / work period for assignment: 2 weeks

Examination Prerequisites:

Method Course: Modern Solid State NMR Spectroscopy

Module PHM-0171: Method Course: Coordination Materials *Method Course: Coordination Materials*	8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer
Dr. Hana Bunzen

Contents:

1. Synthesis of metal complexes:
2. Analytical characterization of metal complexes (thermal analysis, UV/vis spectroscopy, IR spectroscopy, X-ray diffraction)
3. Material composition and stability studies
4. Functional coordination materials (spin-crossover materials, oxygen-carrying materials)

Learning Outcomes / Competences:
The students will learn how to:

- prepare transition metal complexes employing modern preparation techniques (e.g. microwave synthesis), inert synthesis conditions (Schlenk technique),
- characterize coordination compounds by selected analytical techniques,
- develop functional coordination materials based on organic / inorganic hybrid compounds,
- employ X-ray diffraction methods for structural analysis.

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Henning Höppe

Contents:
Synthesis and characterization of functional materials according to the topics:

1. Silicate-analogous compounds
2. Luminescent materials / phosphors
3. Pigments
4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis

Learning Outcomes / Competences:
The students will know how to:

- develop functional materials based on silicate-analogous materials,
- apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),
- work under non-ambient atmospheres (e.g. reducing, inert conditions),
- solve and refine crystal structures from single-crystal data,
- describe and classify these structures properly.

Contents:

Electrodynamics of solids

Maxwell equations and electromagnetic waves in matter

Optical variables

Theories for dielectric function:

i. Free carriers in metals and semiconductors (Drude)

ii. Interband absorptions in semiconductors and insulators
iii. Vibrational absorptions
iv. Multilayer systems

FTIR microspectroscopy

Components of FTIR spectrometers
i. Light sources
ii. Interferometers
iii. Detectors

Microscope components
High pressure experiments Equipments

Pressure calibration

Experimental techniques under high pressure
i. IR spectroscopy
ii. Raman scattering
iii. Magnetic measurements
iv. Transport measurements

Learning Outcomes / Competences:

The students

Learn about the basics of the light interaction with various materials and the fundamentals of FTIR microspectroscopy,

Are introduced to the high pressure equipments used in infrared spectroscopy,

Learn to carry out infrared microspectroscopy experiments under pressure,

Learn to analyze the measured optical spectra.

Workload:

Total: 240 h

Conditions: none		**Credit Requirements:** Written report
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Infrared Microspectroscopy under Pressure
Mode of Instruction: lecture
Language: English
Contact Hours: 2

Assigned Courses:

Method Course: Infrared Microspectroscopy under Pressure (lecture)

Part of the Module: Method Course: Infrared Microspectroscopy under Pressure (Practical Course)
Mode of Instruction: laboratory course
Language: English
Contact Hours: 4

Assigned Courses:

Method Course: Infrared Microspectroscopy under Pressure (Practical Course) (internship)

Examination
Method Course: Infrared Microspectroscopy under Pressure
report

Module PHM-0216: Method Course: Thermal Analysis *Method Course: Thermal Analysis*	8 ECTS/LP
Version 1.0.0 (since WS16/17) Person responsible for module: Prof. Dr. Ferdinand Haider Dr. Robert Horny	

Contents:

Methods of thermal analysis:
- Differential Scanning Calorimetry: DSC, DTA
- Thermo-gravimetric Analysis: TGA
- Dilatometry: DIL
- Dynamic-mechanical Analysis: DMA
-Rheology: RHEO

Advanced Methods:
- Modulated Differential Scanning Calorimetry: MDSC
- Evolved Gas Analysis: EGA (GCMS, FTIR)

Learning Outcomes / Competences:

The students:

- get to know the basic principles of thermal analysis
- learn about fundamental thermal processes in condensed matter ,e.g. phase transitions and relaxation processes (metals, polymers, ceramics)
- learn to plan and carry out complex experiments and the usage of advanced measurement techniques
- learn how to evaluate and analyze thermal data
- are aware of common raw data artefacts leading to misinterpretation

Remarks:

Workload:

Total: 240 h
90 h lecture and exercise course (attendance)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)
30 h studying of course content using provided materials (self-study)

Conditions: Recommended: basic knowledge in solid-state physics		**Credit Requirements:** regular participation, oral presentation (10 min), written report
Frequency: irregular	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Thermal Analysis
Mode of Instruction: lecture
Lecturers: Prof. Dr. Ferdinand Haider
Language: English
Frequency: each winter semester
Contact Hours: 2

Literature:

- Differential scanning calorimetry, Höhne, Hemminger, Flammersheim, H., Springer, 2003
- Practical Gas Chromatography, Dettmer-Wilde, Engewald, Springer, 2014
- Das Rheologie-Handbuch, Mezger, Vincentz, 2010

Part of the Module: Method Course: Thermal Analysis (Practical Course)

Mode of Instruction: laboratory course

Language: English

Frequency: each winter semester

Contact Hours: 4

Examination

Method Course: Thermal Analysis

Module PHM-0221: Method Course: X-ray Diffraction Techniques *Method Course: X-ray Diffraction Techniques*	8 ECTS/LP

Version 1.3.0 (since WS15/16)
Person responsible for module: Prof. Dr. Wolfgang Scherer
PD Dr. Georg Eickerling

Contents:
Subjects of the practical training and the accompanying lecture are the theoretical basics and the practical application of X-ray diffraction techniques:

Data collection and reduction techniques

Symmetry and space group determination

Structural refinements:

• The Rietveld method
• Difference Fourier synthesis

Structure determination:
• Patterson method
• Direct methods

Interpretation of structural refinement results

Errors and Pitfalls: twinning and disorder

Learning Outcomes / Competences:
The students:

- gain basic practical knowledge on structural characterization methods for single- and poly-crystalline samples employing X-ray diffraction techniques,
- have the skill to perform under guidance phase-analyses and X-ray structure determinations
- are competent to analyze hands-on the structure-property relationships of new materials

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 240 h
30 h studying of course content using provided materials (self-study)
30 h studying of course content using literarture (self-study)
90 h studying of course content through exercises / case studies (self-study)
90 h lecture and exercise course (attendance)

Module PHM-0193: Plasma Material Interaction *Plasma-Material-Wechselwirkung*	6 ECTS/LP

Version 2.2.0 (since WS17/18)
Person responsible for module: apl. Prof. Dr.-Ing. Ursel Fantz

Contents:

- Fundamentals of plasma material interactions (winter term)
- High heat load components in nuclear fusion devices (summer term)

Learning Outcomes / Competences:

- Knowledge: The students know the fundamental plasma material interaction processes and their implication for nuclear fusion research in light of the technological boundary conditions and challenges.
- Skills: The students are proficient in a differentiated analysis of complex systems, based on learning from examples of power exhaust in fusion devices.
- Competencies: The students are competent in elaborating current topics of plasma material interaction.
- Integrated achievement of key qualifications: Acquirement of interdisciplinary knowledge, independent work with English literature, abstraction and approximation of complex processes using numerical models, application-oriented thinking and ability to contemplate about experimental results.

Remarks:
The two lectures of this module can be followed in an arbitrary order. Thus, the module can be started at a summer or winter term.

Workload:
Total: 180 h
60 h studying of course content using provided materials (self-study)
60 h studying of course content using literarture (self-study)
60 h lecture (attendance)

Conditions:		**Credit Requirements:**
recommended: module "Plasmaphysik und Fusionsforschung"		general examination for entire module
Frequency: annually	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 2 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Fundamentals of plasma material interactions
Mode of Instruction: lecture
Language: English
Frequency: each winter semester
Contact Hours: 2

Learning Outcome:
see description of module

Contents:
Fundamental plasma boundary physics, erosion processes: physical sputtering, chemical erosion, radiation induced sublimation, arcs, experimental observation of surface processes in plasmas, methods for characterizing surfaces, coating techniques, hydrogen retention, surface modification by plasmas.

Literature:

- P. Stangeby: The plasma boundary of magnetic fusion devices (IOP, 2000)
- R. Clark, D. Reiter (Eds.): Nuclear Fusion Research, Understanding Plasma-Surface Interactions (Springer, 2005)

- M. Turnyanskiy et al.: European roadmap to the realization of fusion energy: Mission for solution on heat-exhaust systems (Fusion Engineering and Design, 2015)

Assigned Courses:

Fundamentals of plasma material interactions (lecture)

**

Part of the Module: High heat load components in nuclear fusion devices

Mode of Instruction: lecture

Language: English

Frequency: each summer semester

Contact Hours: 2

Learning Outcome:

see description of module

Contents:

Interdependency of material choices and fusion performance, material choices and technologies for power exhaust in a fusion power plant, migration of materials in a fusion plasma, diagnostics for plasma material interaction in fusion devices (in situ and post mortem), numerical methods for studying plasma material interaction.

Literature:

- P. Stangeby: The plasma boundary of magnetic fusion devices (IOP, 2000)
- R. Clark, D. Reiter (Eds.): Nuclear Fusion Research, Understanding Plasma-Surface Interactions (Springer, 2005)

Examination

Plasma Material Interaction

oral exam / length of examination: 30 minutes

Module PHM-0234: 2D Materials *2D Materials*	6 ECTS/LP
Version 1.0.1 (since SoSe18 to WS21/22) Person responsible for module: Prof. Dr. Hubert J. Krenner	

Contents:

Two-dimensional materials: graphene to emerging new materials, such as transition metal dichalcogenides

1. Fabrication
2. Optical, electronic and vibrational properties
3. Applications in advanced functional devices

Learning Outcomes / Competences:

1. Specify different classes of 2D solid state materials and their properties.
2. Describe and explain preparation and nanofabrication methods for 2D materials.
3. Understand and explain and differentiate between suitable optical and structural characterization methods for 2D materials.
4. Understand and explain phonon properties of 2D materials.
5. Understand and explain magneto quantum transport phenomena such as the quantum Hall effect in graphene
6. Understand and explain absorption, excitonic and spin properties of transition metal dichalcogenides..
7. Understand and explain and discuss applications of 2D materials and their heterostructures for electronic, optoelectronic, spintronics devices and solar energy converstion.

Workload:

Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
60 h lecture (attendance)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:

recommended prerequisites: basic knowledge in solid-state physics and quantum mechanics.

Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: 2D Materials
Mode of Instruction: lecture
Language: English
Contact Hours: 4
ECTS Credits: 6.0

2D Materials

oral exam / length of examination: 30 minutes

Examination Prerequisites:

2D Materials

Module PHM-0224: Method Course: Theoretical Concepts and Simulation

8 ECTS/LP

Method Course: Theoretical Concepts and Simulation

Version 1.0.0 (since WS15/16)
Person responsible for module: Prof. Dr. Liviu Chioncel

Contents:
This module covers Monte-Carlo methods (computational algorithms) for classical and quantum problems. Python as programing language will be employed. The following common applications will be discussed:

- Monte-Carlo integration, stochastic optimization, inverse problems
- Feynman path integrals: the connection between classical and quantum systems
- Oder and disorder in spin systems, fermions, and boson

Learning Outcomes / Competences:
- The students are capable of obtaining numerical solutions to problems too complicated to be solved analytically
- The students are able to present (graphically), discuss and analyze the results
- The students gain experience in formulatind and carrying out a collaborative project

Remarks:
The number of students will be limited to 8.

Workload:
Total: 240 h
90 h preparation of presentations (self-study)
60 h preparation of written term papers (self-study)
60 h studying of course content (self-study)
90 h (attendance)

Conditions:	**Credit Requirements:**
Knowledge of the programming language Phython is expected on the level taught in the modul PHM-0041. Requirements to understand basic concepts in physics: Classical Mechanics (Newton, Lagrange), Electrodynamics, Thermodynamics and Quantum Mechanics.	Bestehen der Modulprüfung

Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Theoretical Concepts and Simulation
Mode of Instruction: lecture
Language: English / German
Contact Hours: 2

Contents:
Concepts of classical and quantum statistical physics:

- the meaning of sampling, random variables, ergodicity
- equidistribution, pressure, temperature
- path integrals, quantum statistics, enumeration, cluster algorithms

Literature:
1. Werner Krauth, Algorithms and Computations (Oxford University Press, 2006)
2. R. H. Landau, A Survey of Computational Physics (Princeton Univ. Press, 2010)

Part of the Module: Method Course: Theoretical Concepts and Simulation (Practical Course)
Mode of Instruction: internship
Language: English / German
Contact Hours: 4

Contents:
see above

Literature:
see above

Examination
Method Course: Theoretical Concepts and Simulation
report / work period for assignment: 4 weeks
Description:
The requirement for the credit points is based on a programming project carried out in a team of 2-3 students. The final report contains the formulation and a theoretical introduction into the problem, the numerical implementation, and the presentation of the results.

Module PHM-0225: Analog Electronics for Physicists and Materials Scientists *Analog Electronics for Physicists and Materials Scientists*	6 ECTS/LP

Version 1.2.0 (since WS15/16)
Person responsible for module: Andreas Hörner

Contents:

1. Basics in electronic and electrical engineering
2. Quadrupole theory
3. Electronic Networks
4. Semiconductor Devices
5. Implementation of transistors
6. Operational amplifiers
7. Optoelectronic Devices
8. Measurement Devices

Learning Outcomes / Competences:
The students:

- know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the Lab,
- have skills in easy circuit design, measuring and control technology, analog electronics,
- have expertise in independent working on circuit problems. They can calculate and develop easy circuits.

Workload:
Total: 180 h
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
60 h lecture and exercise course (attendance)

Conditions: none		
Frequency: each winter semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Analog Electronics for Physicists and Materials Scientists
Mode of Instruction: lecture + exercise
Lecturers: Andreas Hörner
Language: English
Contact Hours: 4
ECTS Credits: 6.0

Assigned Courses:

Analog Electronics for Physicists and Materials Scientists (lecture + exercise)
**(online/digital) **

Examination

Analog Electronics Analog Electronics for Physicists and Materials Scientists

written exam / length of examination: 90 minutes

Examination Prerequisites:

Analog Electronics for Physicists and Materials Scientists

Module PHM-0226: Digital Electronics for Physicists and Materials Scientists *Digital Electronics for Physicists and Materials Scientists*	6 ECTS/LP

Version 1.3.0 (since WS15/16)
Person responsible for module: Andreas Hörner

Contents:

1. Boolean algebra and logic gates
2. Digital electronics and calculation of digital circuits
3. Converters (Analog – Digital, Digital – Analog)
4. Principle of digital memory and communication,
5. Microprocessors and Networks

Learning Outcomes / Competences:
The students:

- know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the Lab,
- have skills in easy circuit design, measuring and control technology and digital electronics,
- have expertise in independent working on circuit problems. They develop easy digital circuits and program microprocessors

Workload:
Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)

Module PHM-0228: Symmetry concepts and their applications in solid state physics and materials science *Symmetry concepts and their applications in solid state physics and materials science*	6 ECTS/LP

Version 1.0.0 (since WS18/19)
Person responsible for module: Prof. Dr. István Kézsmárki
Deisenhofer, Joachim, Dr.

Contents:
The topical outline of the course is as follows:

- Introduction and common examples
  - Motivating examples
  - Polar and axial vectors and tensors
  - Spatial and temporal symmetries and charge conjugation
  - Symmetries of measurable quantities and fields
  - Symmetries of physical laws (classical and quantum)
  - Conservation laws (linear and angular momentum, energy, etc.)
  - Symmetry of measurement configurations (reciprocity, etc.)
- Neumann principle
  - Linear response theory and Onsager relations
  - Applications to vector and tensor quantities: electric and magnetic dipole moment of molecules; ferroelectricity, ferromagnetism, piezoelectricity and magnetoelectricity in crystals; wave propagation in anisotropic media (sound and light)
- Symmetry allowed energy terms
  - On the level of classical free energy: Polar, nematic and magnetic order parameters (Landau expansion)
  - On the level of Hamiltonians: Molecular vibrations, crystal field potential, magnetic interactions
- Symmetry of physical states
  - Spatial inversion and parity eigenstates
  - Discrete translations and the Bloch states
- Spontaneous symmetry breaking upon phase transitions (Landau theory)
- Outlook: Symmetry guides for skyrmion-host materials, multiferroic compounds and axion insulators

Learning Outcomes / Competences:

- The students know the simple use of symmetry concepts to understand phenomena and material properties without performing detailed calculations.
- The students know how to make minimal plans for experiments using the symmetry of the studied materials or vice versa how to determine the symmetry of materials from the output of experiments.
- The students acquire scientific skills to search for scientific literature and to evaluate scientific content.

Workload:
Total: 180 h
60 h (attendance)
60 h exam preparation (self-study)
60 h studying of course content (self-study)

Conditions: Background in basic quantum mechanics is required.		
Frequency: nach Bedarf WS und SoSe	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Symmetry concepts and their applications in solid state physics and materials science

Contact Hours: 1

Module PHM-0223: Method Course: Tools for Scientific Computing *Method Course: Tools for Scientific Computing*	8 ECTS/LP
Version 1.5.0 (since SoSe18) Person responsible for module: Prof. Dr. Gert-Ludwig Ingold	

Contents:

Important tools for scientific computing are taught in this module and applied to specific scientific problems by the students. As far as tools depend on a particular programming language, Python will be employed. Tools to be discussed include:

- numerical libraries like NumPy and SciPy
- visualisation of numerical results
- use of a version control system like git and its application in collaborative work
- testing of code
- profiling
- documentation of programs

Learning Outcomes / Competences:

- The students are capable of solving a physical problem of some complexity by means of numerical techniques. They are able to visualize the results and to adequately document their program code.
- The students know examples of numerical libraries and are able to apply them to solve scientific problems.
- The students know methods for quality assurance like the use of unit tests and can apply them to their code. They know techniques to identify run-time problems.
- The students know a distributed version control system and are able to use it in a practical problem.
- The students have gained practical experience in a collaborative project work. They are able to plan and carry out a programming project in a small group.
- The students understand the relevance of the tools taught in the method course for good scientific practice.

Remarks:

The number of students will be limited to 12.

Workload:

Total: 240 h
60 h studying of course content (self-study)
90 h (attendance)
30 h preparation of presentations (self-study)
60 h preparation of written term papers (self-study)

Conditions:	**Credit Requirements:**
Knowledge of the programming language Python is expected on the level taught in the module PHM-0243 "Einführung in Prinzipien der Programmierung".	The module examination needs to be passed which is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Frequency: irregular	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Tools for Scientific Computing
Mode of Instruction: lecture
Language: English / German
Contact Hours: 2

Learning Outcome:

- The students know the numerical libraries NumPy and SciPy and selected tools for the visualization of numerical results.
- The students know fundamental techniques for the quality assurance of programs like the use of unit tests, profiling and the use of the version control system git. They are able to adequately document their code.
- The students understand the relevance of the tools taught in the method course for good scientific practice.

Contents:

- numerical libraries NumPy and SciPy
- graphics with matplotlib
- version control system Git and workflow for Gitlab/Github
- unit tests
- profiling
- documentation using docstrings and Sphinx

Literature:

- A. Scopatz, K. D. Huff, *Effective Computation in Physics* (O'Reilly, 2015)
- lecture notes are freely available at https://gertingold.github.io/tools4scicomp

Part of the Module: Method Course: Tools for Scientific Computing (Practical Course)
Mode of Instruction: internship
Language: English / German
Contact Hours: 4

Learning Outcome:

- The students are capable of solving a physical problem of some complexity by means of numerical techniques and to visualize the results.
- They have gained some experience in the application of methods for quality assurance of their code and are able to appropriately document their programs.
- The students are able to work in a team and know how to make use of tools like Gitlab/Github.
- The students are able to present the status of their work, to critically assess it and to accept suggestions from others.

Contents:

The tools discussed in the lecture will be applied to specific scientific problems by small teams of 2-3 students under supervision. The teams regularly inform the other teams in oral presentations on their progress, the tools employed as well as encountered problems and their solution.

Examination

Method Course: Tools for Scientific Computing

report / work period for assignment: 4 weeks

Description:

The requirement for credit points is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Module PHM-0285: Method Course: Computational Biophysics *Method Course: Computational Biophysics*	8 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. Dr. Nadine Schwierz-Neumann	

Contents:
Life relies on the interactions of proteins, nucleic acids, lipids and other biomolecules. This course introduces computational methods to study the structure, dynamics and mechanics of these biomolecules. In the first part of the course, the physics behind biomolecular simulations is explained and the basic principles of classical and statistical mechanics are reviewed. In the second part, different simulation techniques are introduced including molecular dynamics simulations and Monte Carlo simulations. Subsequently the methods are applied to biological systems consisting of proteins, nucleic acids and lipids

Learning Outcomes / Competences:
- Students develop an active understanding of the principles, the capacity and limitations of biomolecular simulations
- Students learn to solve typical biophysical problems analytically and numerically
- Students learn how to run and analyze computer simulations of biological matter
- Students learn to visualize, document and present their simulation results

Remarks:
Number of students will be limited to 15.

Workload:
Total: 240 h
90 h exam preparation (self-study)
60 h studying of course content (self-study)
90 h (attendance)

Conditions:		**Credit Requirements:**
Knowledge of classical mechanics on the bachelor level is expected.		Passing of the module exam
Frequency: irregular	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Computational Biophysics
Mode of Instruction: lecture
Language: English / German
Contact Hours: 2

Learning Outcome:
- Theoretical background of biomolecular simulations
- Computational methods to describe the structure, dynamics and mechanics of biomolecules

Contents:

- Introduction to classical mechanics in phase space
- Probability and information theory
- Connection to statistical mechanics
- Molecular dynamics basics
- Monte Carlo Simulations
- Forces and force fields in biomolecular systems
- Simulations in different ensembles
- Calculating macroscopic thermodynamic properties from simulations

Literature:

- Daniel M. Zuckerman, *Statistical Physics of Biomolecules* (2010 by Taylor and Francis Inc.*)*
- Ken Dill and Sarina Bromberg, *Molecular Driving Forces* (2012 by Taylor and Francis Inc; 2nd edition)
- Daan Frenkel and Berend Smit, *Understanding Molecular Simulation* (2002 by Elsevier, 2nd edition)

Part of the Module: Method Course: Computational Biophysics (Practical Course)

Mode of Instruction: internship

Language: English / German

Contact Hours: 4

Learning Outcome:

- Students learn to solve typical biophysical problems analytically and numerically
- Students learn to run and analyze computer simulations of biological matter
- Students learn to visualization, documentation and presentation of results

Contents:

The methods and tools discussed in the lecture will be applied to typical biophysical problems and biological systems. The students work individually or in small teams under supervision. The students present their solutions, document their simulations and summarize their results in a final report.

Examination

Method Course: Computational Biophysics

written exam / length of examination: 2 hours

Module MRM-0128: Bioinspired Composites *Bioinspired Composites*		6 ECTS/LP
Version 2.0.0 (since WS20/21) Person responsible for module: Prof. Dr.-Ing. Dietmar Koch		
Contents: • Introduction in bionics and bioinspiration • Basics of bionic principles • Fundamental approaches to develop technical components based on bioinspired ideas • Topology optimization • Bioinspired ceramic and polymer based components • Natural fiber based bioinspired materials • Application of bioinspired materials		
Learning Outcomes / Competences: • The students know the basic principles of bionics and bioinspiration • The students know the bionically motivated development of technical components • The students have the competence to explain topology optimization • The students understand general principles bioinspired composites • The students get the knowledge about manufacturing, properties and application of natural fiber based composites • The students acquire scientific skills to search for scientific literature and to evaluate scientific content		
Workload: Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
Conditions: basic knowledge of material science		**Credit Requirements:** Bestehen der Modulprüfung

Finite-Elemente-Modellierung von Multiphysik-Phänomenen

6 ECTS/LP

Version 2.9.0 (since WS19/20)
Person responsible for module: Prof. Dr. Markus Sause
Dozenten: Prof. Dr. Sause / Prof. Dr Peter

Learning Outcomes / Competences:
The students

- get to know existing numerical methods for modeling and simulation of physical processes and systems
- Learn the use and application of numerical methods for realistic problems
- Are able to apply basic functional principles of a FEM program by using "COMSOL Multiphysics".

Remarks:
This module is offered by faculty from MRM and Mathematics. It is intended for physics, MSE and WING students, who want to get an insight into a modern FEM program as it is used in academic and industrial applications.

Workload:
Total: 180 h

Conditions:		**Credit Requirements:**
Recommended: MTH-6110 - Numerische Verfahren für Materialwissenschaftler, Physiker und Wirtschaftsingenieure		Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Finite-Elemente-Modellierung von Multiphysik-Phänomenen
Mode of Instruction: lecture
Lecturers: Prof. Dr. Malte Peter, Prof. Dr. Markus Sause
Language: German
Contact Hours: 2

Contents:
The following content will be presented:

- Modeling and simulation of physical processes and systems.
- Basic concepts of FEM programs
- Generation of meshes
- Optimization strategies
- Selection of solver lgorithms
- Example applications from electrodynamics
- Example applications from thermodynamics
- Example applications from continuum mechanics
- Example applications from fluid dynamics
- Coupling of differential equations for the solution of multiphysics phenomena

Lehr-/Lernmethoden:
Slide presentation, classroom discussion

Examination

Finite-Elemente-Modellierung von Multiphysik-Phänomenen

written/oral exam / length of examination: 60 minutes

Parts of the Module

Part of the Module: Übung zu Finite-Elemente-Modellierung von Multiphysik-Phänomenen

Mode of Instruction: exercise course

Language: German

Contact Hours: 2

Lehr-/Lernmethoden:

Independent reflection of topics to deepen the lecture content

Module MRM-0136: Mechanical Characterization of Materials *Mechanical Characterization of Materials*	6 ECTS/LP
Version 1.1.0 (since SoSe21) Person responsible for module: Prof. Dr. Markus Sause	

Contents:

The following topics are presented:

- Introduction to material characterization
- Linear material behaviour
- Non-linear material behaviour
- Material failure
- Measurement technologies
- Tensile testing
- Compression testing
- Shear testing
- Other static testing concepts
- Fracture mechanics
- Assembly testing
- Surface mechanics
- Creep testing
- Fatigue testing
- High-Velocity testing
- Component testing

Learning Outcomes / Competences:

The students:

- Acquire knowledge in the field of materials testing and evaluation of materials.
- Are introduced to important concepts in measurement techniques, and material models.
- Are able to independently acquire further knowledge of the scientific topic using various forms of information.

Workload:

Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)

Conditions: None		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Mechanical Characterization of Materials
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Examination

Mechanical Characterization of Materials

written exam, written exam / length of examination: 90 minutes

Parts of the Module

Part of the Module: Mechanical Characterization of Materials (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Module PHM-0264: Functional and Smart Macromolecular Materials	6 ECTS/LP

Version 1.2.0 (since WS21/22)
Person responsible for module: PD Dr. Klaus Ruhland

Contents:

Electro-active polymeric materials

- Intrinsically electric conducting polymers (ICPs)
- Working principles of ICPs in selected applications
- Red/Ox-responsive ICPs
- Electrochromism
- Electroactive Actuators
- Non-electric-conducting electrically functional polymers
- Ferroelectric polymers
- Piezoelectric polymers
- Dielectric elastomers

Thermo-active polymeric materials

- Difference between invertibility and reversibility
- Pyro-electric effect vs electro-caloric effect
- High-temperature-stabile polymers
- Thermochromic polymers

Mechano-active polymeric materials

- Shape-Memory-polymers
- Self-healing polymers

Photo-active polymeric materials

- Important chromophors and switching mechanisms
- Photo-responsive polymerization initiators and catalysts

Smart polymer gels

- Thermo-responsive polymer gels (LCST/UCST)
- Electrically charged polymer gels
- pH-responsive polymer gels

Learning Outcomes / Competences:

The Students get to know which functional properties can be implemented into macromolecular marterials by action of which external stimulus.

They reach the ability to differentiate between different mechanisms to introduce smart behaviour into polymeric materials and to decide about dependences between different external stimuli.

They will be competent to design smart functional multi-resonsive macromolecular materials that serve specific application needs time- and space-dependent.

Examples for applications of this type of material design will be discussed.

Workload:

Total: 180 h
80 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture (attendance)
20 h exercise course (attendance)

Conditions:	**Credit Requirements:**
none	passing the final examination

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Assigned Courses:

Functional and Smart Macromolecular Materials (lecture)

Examination
Functional and Smart Macromolecular Materials
written exam / length of examination: 90 minutes

Module PHM-0169: Masterthesis *Masterthesis*		26 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
Contents: According to chosen topic		
Remarks: The master's thesis will be offered in SoSe 2020 as soon as the current situation allows. **COMPULSORY MODULE**		
Workload: Total: 780 h 260 h studying of course content using provided materials (self-study) 520 h lecture and exercise course (attendance)		
Conditions: To begin with the Masterthesis students must have acquired 72 CP from modules consisting of the modulgroups 1a - 5. Recommended: according to the respective advisor		**Credit Requirements:** written thesis
Frequency: each semester Siehe Bemerkungen	**Recommended Semester:** from 4.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 1	**Repeat Exams Permitted:** according to the examination regulations of the study program
