University of Augsburg

Handbook of Modules

Master Program Materials Science (PO 2016)

Faculty of Mathematics, Natural Sciences, and Materials Engineering

Examination regulations as of 11.05.2016

Wichtige Zusatzinformation für das WS 2021/22 aufgrund der Corona-Pandemie:

Bitte berücksichtigen Sie, dass aufgrund der Entwicklungen der Corona-Pandemie die Angaben zu den jeweiligen Prüfungsformaten in den Modulhandbüchern ggf. noch nicht aktuell sind. Welche Prüfungsformate schließlich bei welchen Modulen möglich sein werden, wird im weiteren Verlauf des Semesters geklärt und festgelegt werden.

Valid Wintersemester 2021/2022 - Printed 01.12.2021

Index by Groups of Modules

1) 1a Basics of Materials Science I

PHM-0144: Materials Physics (6 ECTS/LP, Wahlpflicht) *.......... 7

PHM-0110: Materials Chemistry (6 ECTS/LP, Wahlpflicht) *.......... 9

2) 1b Basics of Materials Science II

PHM-0117: Surfaces and Interfaces (6 ECTS/LP, Wahlpflicht) *.......... 11

PHM-0053: Chemical Physics I (6 ECTS/LP, Wahlpflicht) *.......... 13

3) 2 Methods in Materials Science

PHM-0171: Method Course: Coordination Materials (8 ECTS/LP, Wahlpflicht).......... 15

PHM-0147: Method Course: Electron Microscopy (8 ECTS/LP, Wahlpflicht).......... 17

PHM-0146: Method Course: Electronics for Physicists and Materials Scientists (8 ECTS/LP, Wahlpflicht) *.......... 19

PHM-0172: Method Course: Functional Silicate-analogous Materials (8 ECTS/LP, Wahlpflicht) *.......... 21

PHM-0148: Method Course: Optical Properties of Solids (8 ECTS/LP, Wahlpflicht) *.......... 23

PHM-0149: Method Course: Methods in Biophysics (8 ECTS/LP, Wahlpflicht).......... 25

PHM-0151: Method Course: Porous Materials - Synthesis and Characterization (8 ECTS/LP, Wahlpflicht).......... 27

PHM-0221: Method Course: X-ray Diffraction Techniques (8 ECTS/LP, Wahlpflicht).......... 29

PHM-0235: Method Course: 2D Materials (8 ECTS/LP, Wahlpflicht).......... 31

PHM-0153: Method Course: Magnetic and Superconducting Materials (8 ECTS/LP, Wahlpflicht).......... 32

PHM-0154: Method Course: Modern Solid State NMR Spectroscopy (8 ECTS/LP, Wahlpflicht).......... 34

PHM-0206: Method Course: Infrared Microspectroscopy under Pressure (8 ECTS/LP, Wahlpflicht) *.......... 36

PHM-0216: Method Course: Thermal Analysis (8 ECTS/LP, Wahlpflicht).......... 38

PHM-0224: Method Course: Theoretical Concepts and Simulation (8 ECTS/LP, Wahlpflicht).......... 40

PHM-0223: Method Course: Tools for Scientific Computing (8 ECTS/LP, Wahlpflicht).......... 42

PHM-0150: Method Course: Spectroscopy on Condensed Matter (8 ECTS/LP, Wahlpflicht) *.......... 44

PHM-0258: Method course: Charge doping effects in semiconductors (8 ECTS/LP, Wahlpflicht) *.......... 46

4) 3a Conducting and Presenting Scientific Work - Seminar

* = Im aktuellen Semester wird mindestens eine Lehrveranstaltung für dieses Modul angeboten

PHM-0158: Introduction to Materials (= Seminar) (4 ECTS/LP, Pflicht) *... 48

5) 3b Conducting and Presenting Scientific Work - Laboratory Project

PHM-0159: Laboratory Project (10 ECTS/LP, Pflicht)..49

6) 4 Materials Science - Major Topic

a) Physics of Materials

PHM-0058: Organic Semiconductors (6 ECTS/LP) *... 50

PHM-0060: Low Temperature Physics (6 ECTS/LP) *...52

PHM-0066: Superconductivity (6 ECTS/LP) *... 54

PHM-0252: Optical Excitations in Materials (6 ECTS/LP, Wahlpflicht)..56

PHM-0253: Dielectric Materials (6 ECTS/LP, Wahlpflicht)... 58

PHM-0051: Biophysics and Biomaterials (6 ECTS/LP, Wahlpflicht)...59

PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht)... 61

PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP, Wahlpflicht)................ 63

PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht)..65

PHM-0203: Physics of Cells (6 ECTS/LP, Wahlpflicht)..67

b) Chemistry of Materials

PHM-0054: Chemical Physics II (6 ECTS/LP, Wahlpflicht)... 69

PHM-0161: Coordination Materials (6 ECTS/LP, Wahlpflicht)...71

PHM-0113: Advanced Solid State Materials (6 ECTS/LP, Wahlpflicht)...73

PHM-0217: Advanced X-ray and Neutron Diffraction Techniques (6 ECTS/LP, Wahlpflicht)............... 75

PHM-0114: Porous Functional Materials (6 ECTS/LP, Wahlpflicht) *... 77

PHM-0218: Novel Methods in Solid State NMR Spectroscopy (6 ECTS/LP, Wahlpflicht)....................79

PHM-0167: Oxidation and Corrosion (6 ECTS/LP, Wahlpflicht)...80

PHM-0264: Functional and Smart Macromolecular Materials (6 ECTS/LP, Wahlpflicht) *................... 82

c) Engineering of Materials

MRM-0126: Ceramic Matrix Composites (6 ECTS/LP) *..84

PHM-0164: Characterization of Composite Materials (6 ECTS/LP, Wahlpflicht)..................................86

PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht) *...88

MRM-0052: Functional Polymers (6 ECTS/LP, Wahlpflicht)........ 90

PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht) *........ 92

PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht)........ 94

PHM-0196: Surfaces and Interfaces II: Joining processes (6 ECTS/LP, Wahlpflicht)........ 96

MRM-0136: Mechanical Characterization of Materials (6 ECTS/LP, Wahlpflicht)........ 98

7) 5 Materials Science Elective Topic (PO16)

MRM-0126: Ceramic Matrix Composites (6 ECTS/LP, Wahlpflicht) *........ 100

MRM-0142: Complex 3D Structures and Components from 2D Materials (6 ECTS/LP, Wahlpflicht) *........ 102

PHM-0252: Optical Excitations in Materials (6 ECTS/LP, Wahlpflicht)........ 104

PHM-0253: Dielectric Materials (6 ECTS/LP, Wahlpflicht)........ 106

PHM-0166: Carbon-based functional Materials (Carboterials) (6 ECTS/LP, Wahlpflicht)........ 107

PHM-0174: Theoretical Concepts and Simulation (6 ECTS/LP, Wahlpflicht)........ 109

PHM-0058: Organic Semiconductors (6 ECTS/LP, Wahlpflicht) *........ 111

PHM-0066: Superconductivity (6 ECTS/LP, Wahlpflicht) *........ 113

PHM-0060: Low Temperature Physics (6 ECTS/LP, Wahlpflicht) *........ 115

PHM-0114: Porous Functional Materials (6 ECTS/LP, Wahlpflicht) *........ 117

PHM-0068: Spintronics (6 ECTS/LP, Wahlpflicht)........ 119

PHM-0057: Physics of Thin Films (6 ECTS/LP, Wahlpflicht)........ 121

PHM-0056: Ion-Solid Interaction (6 ECTS/LP, Wahlpflicht)........ 123

PHM-0069: Applied Magnetic Materials and Methods (6 ECTS/LP, Wahlpflicht)........ 125

PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (6 ECTS/LP, Wahlpflicht)........ 127

PHM-0051: Biophysics and Biomaterials (6 ECTS/LP, Wahlpflicht)........ 129

PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht)........ 131

PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP, Wahlpflicht)........ 133

PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht)........ 135

PHM-0054: Chemical Physics II (6 ECTS/LP, Wahlpflicht)........ 137

PHM-0161: Coordination Materials (6 ECTS/LP, Wahlpflicht)........ 139

PHM-0113: Advanced Solid State Materials (6 ECTS/LP, Wahlpflicht)........ 141

PHM-0218: Novel Methods in Solid State NMR Spectroscopy (6 ECTS/LP, Wahlpflicht)........ 143

PHM-0167: Oxidation and Corrosion (6 ECTS/LP, Wahlpflicht)..144

PHM-0164: Characterization of Composite Materials (6 ECTS/LP, Wahlpflicht)...............................146

PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht) *...148

PHM-0165: Introduction to Mechanical Engineering (6 ECTS/LP, Wahlpflicht).................................150

MRM-0052: Functional Polymers (6 ECTS/LP, Wahlpflicht)... 151

PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht)...153

PHM-0196: Surfaces and Interfaces II: Joining processes (6 ECTS/LP, Wahlpflicht)........................ 155

PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht) *...157

PHM-0203: Physics of Cells (6 ECTS/LP, Wahlpflicht)..159

PHM-0117: Surfaces and Interfaces (6 ECTS/LP, Wahlpflicht) *... 161

PHM-0053: Chemical Physics I (6 ECTS/LP, Wahlpflicht) *.. 163

PHM-0217: Advanced X-ray and Neutron Diffraction Techniques (6 ECTS/LP, Wahlpflicht)............. 165

PHM-0146: Method Course: Electronics for Physicists and Materials Scientists (8 ECTS/LP, Wahlpflicht) *... 167

PHM-0148: Method Course: Optical Properties of Solids (8 ECTS/LP, Wahlpflicht) *....................... 169

PHM-0151: Method Course: Porous Materials - Synthesis and Characterization (8 ECTS/LP, Wahlpflicht)..171

PHM-0147: Method Course: Electron Microscopy (8 ECTS/LP, Wahlpflicht)....................................173

PHM-0149: Method Course: Methods in Biophysics (8 ECTS/LP, Wahlpflicht)................................ 175

PHM-0153: Method Course: Magnetic and Superconducting Materials (8 ECTS/LP, Wahlpflicht).....177

PHM-0154: Method Course: Modern Solid State NMR Spectroscopy (8 ECTS/LP, Wahlpflicht)....... 179

PHM-0171: Method Course: Coordination Materials (8 ECTS/LP)...181

PHM-0172: Method Course: Functional Silicate-analogous Materials (8 ECTS/LP, Wahlpflicht) *.....183

PHM-0206: Method Course: Infrared Microspectroscopy under Pressure (8 ECTS/LP, Wahlpflicht) *... 185

PHM-0216: Method Course: Thermal Analysis (8 ECTS/LP, Wahlpflicht).. 187

PHM-0221: Method Course: X-ray Diffraction Techniques (8 ECTS/LP, Wahlpflicht)........................189

PHM-0193: Plasma Material Interaction (6 ECTS/LP, Wahlpflicht) *.. 191

PHM-0234: 2D Materials (6 ECTS/LP, Wahlpflicht).. 193

PHM-0235: Method Course: 2D Materials (8 ECTS/LP, Wahlpflicht)..195

PHM-0224: Method Course: Theoretical Concepts and Simulation (8 ECTS/LP, Wahlpflicht)...........196

PHM-0225: Analog Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht) *... 198

PHM-0226: Digital Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht).......200

PHM-0228: Symmetry concepts and their applications in solid state physics and materials science (6 ECTS/LP, Wahlpflicht)........ 202

PHM-0223: Method Course: Tools for Scientific Computing (8 ECTS/LP, Wahlpflicht)......................204

PHM-0150: Method Course: Spectroscopy on Condensed Matter (8 ECTS/LP, Wahlpflicht) *.......... 206

MRM-0128: Bioinspired Composites (6 ECTS/LP, Wahlpflicht)........ 208

MRM-0112: Finite element modeling of multiphysics phenomena (6 ECTS/LP, Wahlpflicht)............. 210

MRM-0136: Mechanical Characterization of Materials (6 ECTS/LP, Wahlpflicht)........ 212

PHM-0264: Functional and Smart Macromolecular Materials (6 ECTS/LP, Wahlpflicht) *................ 214

8) 6 Finals

PHM-0169: Masterthesis (26 ECTS/LP, Pflicht)........ 216

PHM-0170: Colloquium (4 ECTS/LP, Pflicht)........ 217

9) 7 Functional Materials (International) – zweites Studienjahr Ausland

PHM-0208: Functional Materials (International) – second year (Institut National Polytechnique de Grenoble) (58 ECTS/LP)........ 218

PHM-0211: Functional Materials (International) – second year (Université Bordeaux I) (58 ECTS/LP)........ 219

PHM-0212: Functional Materials (International) – second year (Université Catholique de Louvain) (58 ECTS/LP)........ 220

PHM-0213: Functional Materials (International) – second year (Université de Liège) (58 ECTS/LP)........ 221

PHM-0214: Functional Materials (International) – second year (Universidade de Aveiro) (58 ECTS/LP)........ 222

10) 8 Functional Materials (International) – erstes Studienjahr Ausland

PHM-0209: Functional Materials (International) – first year (Institut National Polytechnique de Grenoble) (62 ECTS/LP)........ 223

Module PHM-0144: Materials Physics *Materials Physics*	6 ECTS/LP

Version 1.1.0 (since WS15/16)
Person responsible for module: apl. Prof. Dr. Helmut Karl

Contents:

- Electrons in solids
- Phonons
- Properties of metals, semiconductors and insulators
- Application in optical, electronic, and optoelectronic devices
- Dielectric solids, optical properties

Learning Outcomes / Competences:

- The students know the basic terms and concepts of solid state physics like the free electron gas, electronic band structure, charge carrier statistics, phonons, doping and optical properties,
- are capable to apply derived approximations as the effective mass or the electron-hole concept to describe basic characteristics of semiconductor materials,
- have the competence to apply these concepts for the description of electric, electro-optic and thermal properties of solids and to describe their functionalities,
- understand size effects on material physical properties.
- Integrated acquirement of soft skills: Working with specialist literature, literature search and interdisciplinary thinking.

Remarks:
compulsory module

Workload:
Total: 180 h
120 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions: basic knowledge of solid state physics		
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Materials Physics
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:
see module description

Contents:

- Electrons in solids: Free electron gas, band structure, effective mass
- Lattice dynamics: Phonons, phonon dispersion, acoustic and optical phonons
- Properties of metals: Electrical conductivity, Fermi surfaces, thermal properties
- Properties of semiconductors: Pure, intrinsic semiconductors, equilibrium conditions, doping
- Properties of dielectric materials: Propagation of electromagnetic waves, frequency dependent optical properties, polarization effects.
- Application in devices: Heterostructures, Schottky contact, pn-junction, solar cell, light emission and technological aspects

Literature:

- Hummel R. E. : Electronic Properties of Materials Springer 2001 (UP1000 H925)
- Burns G.: Solid State Physics Academic Press 1990 (UP1000 B967)
- Ashcroft N. W. , Mermin N.D. : Solid State Physics (UP1000 A 824)
- Kittel C. : Introduction to Solid State Physics (UP1000 K 62)

Assigned Courses:

Materials Physics (lecture)
**

Part of the Module: Materials Physics (Tutorial)
Mode of Instruction: exercise course
Language: English
Contact Hours: 1

Learning Outcome:
see module description

Assigned Courses:

Materials Physics (Tutorial) (exercise course)
**

Examination
Materials Physics
written exam / length of examination: 90 minutes
Examination Prerequisites:
Materials Physics

Module PHM-0110: Materials Chemistry *Materials Chemistry*		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Henning Höppe		

Contents:
• Revision of basic chemical concepts
• Solid state chemical aspects of selected materials, such as
  ◦ Thermoelectrics
  ◦ Battery electrode materials, ionic conductors
  ◦ Hydrogen storage materials
  ◦ Data storage materials
  ◦ Phosphors and pigments
  ◦ Heterogeneous catalysis
  ◦ nanoscale materials		

Learning Outcomes / Competences: The students will • be able to apply basic chemical concepts on materials science problems, • broaden their ability to derive structure-property relations of materials combining their extended knowledge about symmetry-related properties, chemical bonding in solids and chemical properties of selected compound classes, • be able to assess synthetic approaches towards relevant materials, • acquire skills to perform literature research using online data bases.		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: The lecture course is based on the Bachelor in Materials Science courses Chemie I and Chemie III (solid state chemistry).		
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Materials Chemistry **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3
Learning Outcome: see description of module
Contents: see description of module

Literature:

- A. R. West, Solid State Chemistry, John Wiley, Chichester.
- U. Müller, Inorganic Structural Chemistry, Wiley-VCH.
- R. Dronskowski, Computational Chemistry of Solid State Materials, Wiley VCH.
- Textbooks on Basics of Inorganic Chemistry such as J. E. Huheey, E. Keiter, R. Keiter, Anorganische Chemie, de Gruyter, or equivalents.
- Moreover, selected reviews and journal articles will be cited on the slides.

Assigned Courses:

Materials Chemistry (lecture)

**

Part of the Module: Materials Chemistry (Tutorial)

Mode of Instruction: exercise course

Language: English

Examination

Materials Chemistry

written exam / length of examination: 90 minutes

Examination Prerequisites:

Materials Chemistry

Module PHM-0117: Surfaces and Interfaces *Surfaces and Interfaces*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Manfred Albrecht

Contents:
Introduction

- The importance of surfaces and interfaces

Some basic facts from solid state physics

- Crystal lattice and reciprocal lattice
- Electronic structure of solids
- Lattice dynamics

Physics at surfaces and interfaces

- Structure of ideal and real surfaces
- Relaxation and reconstruction
- Transport (diffusion, electronic) on interfaces
- Thermodynamics of interfaces
- Electronic structure of surfaces
- Chemical reactions on solid state surfaces (catalysis)
- Interface dominated materials (nano scale materials)

Methods to study chemical composition and electronic structure, application examples

- Scanning electron microscopy
- Scanning tunneling and scanning force microscopy
- Auger – electron – spectroscopy
- Photo electron spectroscopy

Learning Outcomes / Competences:
The students:

- have knowledge of the structure, the electronical properties, the thermodynamics, and the chemical reactions on surfaces and interfaces,
- acquire the skill to solve problems of fundamental research and applied sciences in the field of surface and interface physics,
- have the competence to solve certain problems autonomously based on the thought physical basics.
- Integrated acquirement of soft skills.

Workload:
Total: 180 h
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
60 h lecture and exercise course (attendance)

Conditions:
The module "Physics IV - Solid State Physics" of the Bachelor of Physics / Materials Science program should be completed first.

Frequency: each winter semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Surfaces and Interfaces
Mode of Instruction: lecture
Language: English
Frequency: annually
Contact Hours: 3

Learning Outcome:
see module description

Contents:
see module description

Literature:

- Ertl, Küppers: Low Energy Electrons and Surface Chemistry (VCH)
- Lüth: Surfaces and Interfaces of Solids (Springer)
- Zangwill: Physics at Surfaces (Cambridge)
- Feldmann, Mayer: Fundamentals of Surface and thin Film Analysis (North Holland)
- Henzler, Göpel: Oberflächenphysik des Festkörpers (Teubner)
- Briggs, Seah: Practical Surface Analysis I und II (Wiley)

Assigned Courses:

Surfaces and Interfaces (lecture)
**

Part of the Module: Surfaces and Interfaces (Tutorial)
Mode of Instruction: exercise course
Language: English
Frequency: annually
Contact Hours: 1

Assigned Courses:

Surfaces and Interfaces (Tutorial) (exercise course)
(online/digital)

Examination
Surfaces and Interfaces
written exam / length of examination: 90 minutes
Examination Prerequisites:
Surfaces and Interfaces

Module PHM-0053: Chemical Physics I *Chemical Physics I*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Wolfgang Scherer

Contents:

- Basics of quantum chemical methods
- Molecular symmetry and group theory
- The electronical structure of transition metal complexes

Learning Outcomes / Competences:

The students:

- know the basics of the extended-Hückel-method and the density functional theory,
- know the basics of group theory,
- are able to apply the knowledge gained through consideration of symmetry from vibration-, NMR-, and UV/VIS-spectroscopy, and
- are able to interpret and predict the basical geometric, electronical and magnetical properties of transition metal complexes.
- Integrated acquirement of soft skills: ability to specialize in a scientific topic and to apply the acquired knowledge for solving scientific problems.

Remarks:

It is possible for students to do EHM calculations autonomously and analyze electronical structures of molecules on a computer cluster within the scope of the tutorial.

Workload:

Total: 180 h
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions:

It is recommended to complete the experiments FP11 (IR-spectroscopy) and FP17 (Raman-spectroscopy) of the module "Physikalisches Fortgeschrittenenpraktikum".

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Chemical Physics I

Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:

see module description

Contents:

- Basics of quantum chemical methods
  - Extended Hueckel method (EHM)
  - Modern quantum chemical methods of chemical physics
  - Application: exemplary calculations and interpretation of simple electronical structures
- Molecular symmetry and group theory
  - Symmetry operations and matrix transformations
  - Point groups
  - Reducible and irreducible representations
  - Character tables
  - Application: infrared- and raman-spectroscopy, NMR-spectroscopy
- The electronical structure of transition metal complexes
  - Ligand field theory and angular-overlap model (AOM)
  - The physical basics of the spectrochemical series
  - Molecular orbital theory of transition metal complexes
  - Application: UV/VIS-spectroscopy, molecular magnetism

Literature:

Examination

Chemical Physics I

written exam / length of examination: 90 minutes

Examination Prerequisites:

Chemical Physics I

Module PHM-0171: Method Course: Coordination Materials *Method Course: Coordination Materials*			8 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer Dr. Hana Bunzen			
Contents: 1. Synthesis of metal complexes: 2. Analytical characterization of metal complexes (thermal analysis, UV/vis spectroscopy, IR spectroscopy, X-ray diffraction) 3. Material composition and stability studies 4. Functional coordination materials (spin-crossover materials, oxygen-carrying materials)			
Learning Outcomes / Competences: The students will learn how to: • prepare transition metal complexes employing modern preparation techniques (e.g. microwave synthesis), inert synthesis conditions (Schlenk technique), • characterize coordination compounds by selected analytical techniques, • develop functional coordination materials based on organic / inorganic hybrid compounds, • employ X-ray diffraction methods for structural analysis.			
Remarks: **ELECTIVE COMPULSORY MODULE**			
Workload: Total: 240 h 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 120 h lecture and exercise course (attendance)			
Conditions: none		**Credit Requirements:** written report (protocols)	
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]	
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program		

Parts of the Module

Part of the Module: Method Course: Coordination Materials (Practical Course)
Mode of Instruction: laboratory course
Language: English
Contact Hours: 4

Part of the Module: Method Course: Coordination Materials (Seminar)
Mode of Instruction: seminar
Language: English
Contact Hours: 2

Literature:

- Chemical databases
- Primary literature

Examination

Method Course: Coordination Materials (Seminar)

seminar

Examination Prerequisites:

Method Course: Coordination Materials (Seminar)

Module PHM-0147: Method Course: Electron Microscopy *Method Course: Electron Microscopy*			8 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider			
Contents: 1. Scanning electron microscopy (SEM) 2. Transmission electron microscopy (TEM)			
Learning Outcomes / Competences: The students: • get introduced to the basics of scanning electron microscopy and transmission electron microscopy, using lectures to teach the theoretical basics, which are afterwards deepened using practical courses, • are able to characterize materials using different electron microscopy techniques and to decide, if the technique is feasible for a certain problem.			
Remarks: **ELECTIVE COMPULSORY MODULE**			
Workload: Total: 240 h 90 h lecture and exercise course (attendance) 150 h studying of course content using provided materials (self-study)			
Conditions: Recommended: knowledge of solid-state physics, reciprocal lattice			**Credit Requirements:** regular participation, oral presentation (10 min), written report (one report per group)
Frequency: each summer semester	**Recommended Semester:** from 2.		**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program		

Parts of the Module
Part of the Module: Method Course: Electron Microscopy **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 2

Contents:

SEM:

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

TEM:

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM

- S. L. Flegler, J. W. Heckman, K. L. Klomparens, Elektronenmikroskopie, Spektrum, Akad. Verl., 1995

Part of the Module: Method Course: Electron Microscopy (Practical Course)

Mode of Instruction: laboratory course

Language: English

Contact Hours: 4

Examination

Method Course: Electron Microscopy

report

Examination Prerequisites:

Method Course: Electron Microscopy

Module PHM-0146: Method Course: Electronics for Physicists and Materials Scientists *Method Course: Electronics for Physicists and Materials Scientists*	8 ECTS/LP

Version 1.2.0 (since SoSe15 to WS21/22)
Person responsible for module: Andreas Hörner

Contents:

1. Basics in electronic and electrical engineering [4]
2. Quadrupole theory [2]
3. Analog technique, transistor and opamp circuits [5]
4. Boolean algebra and logic [4]
5. Digital electronics and calculation circuits [6]
6. Microprocessors and Networks [4]
7. Basics in Electronic [8]
8. Implementation of transistors [8]
9. Operational amplifiers [8]
10. Digital electronics [8]
11. Practical circuit arrangement [8]

Learning Outcomes / Competences:
The students:

- know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the laboratory,
- have skills in easy circuit design, measuring and control technology, analog and digital electronics,
- have expertise in independent working on circuit problems. They can calculate and develop easy circuits.

Remarks:
ELECTIVE COMPULSORY MODULE

Attendance in the **Method Course: Electronics for Physicists and Materials Scientists (combined lab course AND lecture)** excludes credit points for the lecture **Electronics for Physicists and Materials Scientists.**

Workload:
Total: 240 h
100 h lecture and exercise course (attendance)
140 h studying of course content using provided materials (self-study)

Conditions: none		**Credit Requirements:** written report (one per group)
Frequency: each semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Method Course: Electronics for Physicists and Materials Scientists

oral exam / length of examination: 30 minutes

Description:

Ausnahmefall SoSe 2020: schriftliche Prüfung

Module PHM-0172: Method Course: Functional Silicate-analogous Materials *Method Course: Functional Silicate-analogous Materials*		8 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Henning Höppe		
Contents: Synthesis and characterization of functional materials according to the topics: 1. Silicate-analogous compounds 2. Luminescent materials / phosphors 3. Pigments 4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis		
Learning Outcomes / Competences: The students will know how to: • develop functional materials based on silicate-analogous materials, • apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules), • work under non-ambient atmospheres (e.g. reducing, inert conditions), • solve and refine crystal structures from single-crystal data, • describe and classify these structures properly.		
Remarks: **ELECTIVE COMPULSORY MODULE**		
Workload: Total: 240 h 120 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Recommended: attendance to the lecture "Advanced Solid State Materials"		**Credit Requirements:** written report (protocol)
Frequency: each semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Method Course: Functional Silicate-analogous Materials (Practical Course) **Mode of Instruction:** laboratory course **Language:** English **Contact Hours:** 6

Learning Outcome:

The students will know how to:

- develop functional materials based on silicate-analogous materials,
- apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),
- work under non-ambient atmospheres (e.g. reducing, inert conditions),
- solve and refine crystal structures from single-crystal data,
- describe and classify these structures properly.

Contents:

Synthesis and characterization of functional materials according to the topics:

1. Silicate-analogous compounds
2. Luminescent materials / phosphors
3. Pigments
4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis

Assigned Courses:

Method Course: Functional Silicate-analogous Materials (Practical Course) (internship)

**(online/digital) **

Examination

Method Course: Functional Silicate-analogous Materials

seminar

Examination Prerequisites:

Method Course: Functional Silicate-analogous Materials

Module PHM-0148: Method Course: Optical Properties of Solids *Method Course: Optical Properties of Solids*	8 ECTS/LP

Version 1.2.0 (since SoSe15)
Person responsible for module: Prof. Dr. Joachim Deisenhofer

Contents:

Electrodynamics of solids

- Maxwell equations
- Electromagnetic waves
- Refraction and interference, Fresnel equations

FTIR spectroscopy

- Fourier transformation
- Michelson-Morley and Genzel interferometer
- Sources and detectors

Terahertz Time Domain spectroscopy

- Generation of pulsed THz radiation
- Gated detection, Austin switches

Elementary excitations in solid materials

- Rotational-vibrational bands
- Infrared-active phonons
- Interband excitations
- Crystal-field excitations

Learning Outcomes / Competences:

The students:

- get to know the basic principles of far-infrared spectroscop and terahertz time-domain-spectroscopy,
- learn about fundamental physical excitations in condensed matter that can be studied by these methods,
- learn to plan and carry out complex experiments,
- learn how to evaluate and analyze optical data.

Remarks:

Workload:

Total: 240 h
30 h studying of course content using provided materials (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)
90 h lecture and exercise course (attendance)

Conditions: Recommended: basic knowledge in solid-state physics, basic knowledge in electrodynamics and optics		**Credit Requirements:** written report
Frequency: each semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination
Method Course: Optical Properties of Solids
report
Examination Prerequisites:
Method Course: Optical Properties of Solids

Module PHM-0149: Method Course: Methods in Biophysics

8 ECTS/LP

Method Course: Methods in Biophysics

Version 1.0.0 (since SoSe15)
Person responsible for module: Dr. Stefan Thalhammer

Contents:
Unit radiation biophysics

- Concepts in radiation protection
- Low-dose irradiation biophysics
- DNA repair dynamics of living cells after ionizing radiation
- Confocal scanning laser microscopy

Unit microfluidic

- Microfluidic systems
- Accoustic driven microfluidics
- Calculation of microfluidic problems

Unit analysis

Learning Outcomes / Competences:
The students:

- know basic terms, concepts and phenomena in radiation biophysics,
- acquire basic knowledge of fluidic and biophysical phenomena on small length scales and applications and technologies of microfluidic analytical systems,
- learn skills in tissue culture and immun-histochemical staining procedures,
- learn skills in fluorescence and confocal scanning microscopy,
- learn skills to calculate fluidic problems on small length scales,
- learn skills to handle microfluidic channel systems.

Remarks:
ELECTIVE COMPULSORY MODULE

The course will partly take place at the Helmholtz Center Munich.

Workload:
Total: 240 h

Conditions: Attendance of the lecture "Biophysics and Biomaterials"		**Credit Requirements:** 1 written lab report
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Method Course: Methods in Biophysics

report

Examination Prerequisites:

Method Course: Methods in Biophysics

Module PHM-0151: Method Course: Porous Materials - Synthesis and Characterization *Method Course: Porous Materials - Synthesis and Characterization*	8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer

Contents:
Synthesis of porous functional materials (e.g. aerogels, mesoporous silica materials, zeolites, Metal-Organic Frameworks)

Characterization methods

- Structure and composition (XRD, UV/VIS, IR, ESEM, EDX)
- Thermal analysis (TGA)
- Adsorption and diffusion (BET, pore size distribution, pulse chemisorption)
- Catalytic properties (GC/MS, TPO, TPR)

Learning Outcomes / Competences:
The students will learn how to

- use modern solid state preparation techniques (e.g. hydrothermal, solvothermal, microwave synthesis),
- employ analytical methods dedicated to porous materials.

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 240 h
120 h internship / practical course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:		**Credit Requirements:**
Recommended: lecture Functional Porous Materials		written report (editing time 3 weeks) + written exam Please note that final grade of the Method Course consists of the maximum point score of of the exam and the grade of the report of the practical part which are weighted (40:60).
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Porous Materials Synthesis and Characterization (Practical Course)
Mode of Instruction: laboratory course
Language: English

Examination

Method Course: Porous Materials Synthesis and Characterization

written exam / length of examination: 45 minutes

Examination Prerequisites:

Method Course: Porous Materials Synthesis and Characterization

Module PHM-0221: Method Course: X-ray Diffraction Techniques *Method Course: X-ray Diffraction Techniques*		8 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Wolfgang Scherer PD Dr. Georg Eickerling		

Contents:

Subjects of the practical training and the accompanying lecture are the theoretical basics and the practical application of X-ray diffraction techniques:

Data collection and reduction techniques

Symmetry and space group determination

Structural refinements:
• The Rietveld method
• Difference Fourier synthesis

Structure determination:
• Patterson method
• Direct methods

Interpretation of structural refinement results

Errors and Pitfalls: twinning and disorder

Learning Outcomes / Competences:

The students:

- gain basic practical knowledge on structural characterization methods for single- and poly-crystalline samples employing X-ray diffraction techniques,
- have the skill to perform under guidance phase-analyses and X-ray structure determinations
- are competent to analyze hands-on the structure-property relationships of new materials

Remarks:

Module PHM-0153: Method Course: Magnetic and Superconducting Materials *Method Course: Magnetic and Superconducting Materials*		8 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Philipp Gegenwart		

Contents:

Methods of growth and characterization:

Sample preparation (bulk materials and thin films), e.g.,

- arcmelting
- flux-growth
- sputtering and evaporation

Sample characterization, e.g.,

- X-ray diffraction
- electron microscopy, scanning tunneling microscopy
- magnetic susceptibility, electrical resistivity
- specific heat

Learning Outcomes / Competences:

The students

- get to know the basic methods of materials growth and characterization, such as poly- and single crystal growth, thin-film growth, X-ray diffraction, magnetic susceptibility, dc-conductivity, and specific heat measurements
- are trained in planning and performing complex experiments
- learn to evaluate and analyze the collected data, are taught to work on problems in experimental solid state physics, including analysis of measurement results and their interpretation in the framework of models and theories

Workload:

Total: 240 h

90 h lecture and exercise course (attendance)

30 h studying of course content using provided materials (self-study)

90 h studying of course content through exercises / case studies (self-study)

30 h studying of course content using literarture (self-study)

Conditions: Recommended: basic knowledge in solid state physics and quantum mechanics		**Credit Requirements:** presentation and written report on the experiments (editing time 3 weeks, max. 30 pages)
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]

report / work period for assignment: 2 weeks

Examination Prerequisites:

Method Course: Modern Solid State NMR Spectroscopy

Module PHM-0206: Method Course: Infrared Microspectroscopy under Pressure *Method Course: Infrared Microspectroscopy under Pressure*		8 ECTS/LP
Version 1.0.0 (since WS16/17) Person responsible for module: Prof. Dr. Christine Kuntscher		

Contents:

Electrodynamics of solids

Maxwell equations and electromagnetic waves in matter

Optical variables

Theories for dielectric function:

i. Free carriers in metals and semiconductors (Drude)

ii. Interband absorptions in semiconductors and insulators
iii. Vibrational absorptions
iv. Multilayer systems

FTIR microspectroscopy

Components of FTIR spectrometers
i. Light sources
ii. Interferometers
iii. Detectors

Microscope components
High pressure experiments Equipments

Pressure calibration

Experimental techniques under high pressure
i. IR spectroscopy
ii. Raman scattering
iii. Magnetic measurements
iv. Transport measurements

Learning Outcomes / Competences:
The students

Learn about the basics of the light interaction with various materials and the fundamentals of FTIR microspectroscopy,

Are introduced to the high pressure equipments used in infrared spectroscopy,

Learn to carry out infrared microspectroscopy experiments under pressure,

Learn to analyze the measured optical spectra.

Workload:
Total: 240 h

Module PHM-0224: Method Course: Theoretical Concepts and Simulation *Method Course: Theoretical Concepts and Simulation*		8 ECTS/LP
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Liviu Chioncel		
Contents: This module covers Monte-Carlo methods (computational algorithms) for classical and quantum problems. Python as programing language will be employed. The following common applications will be discussed: • Monte-Carlo integration, stochastic optimization, inverse problems • Feynman path integrals: the connection between classical and quantum systems • Oder and disorder in spin systems, fermions, and boson		
Learning Outcomes / Competences: • The students are capable of obtaining numerical solutions to problems too complicated to be solved analytically • The students are able to present (graphically), discuss and analyze the results • The students gain experience in formulatind and carrying out a collaborative project		
Remarks: The number of students will be limited to 8.		
Workload: Total: 240 h 90 h preparation of presentations (self-study) 60 h preparation of written term papers (self-study) 60 h studying of course content (self-study) 90 h (attendance)		
Conditions: Knowledge of the programming language Phython is expected on the level taught in the modul PHM-0041. Requirements to understand basic concepts in physics: Classical Mechanics (Newton, Lagrange), Electrodynamics, Thermodynamics and Quantum Mechanics.		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Method Course: Theoretical Concepts and Simulation **Mode of Instruction:** lecture **Language:** English / German **Contact Hours:** 2
Contents: Concepts of classical and quantum statistical physics: • the meaning of sampling, random variables, ergodicity • equidistribution, pressure, temperature • path integrals, quantum statistics, enumeration, cluster algorithms
Literature: 1. Werner Krauth, Algorithms and Computations (Oxford University Press, 2006) 2. R. H. Landau, A Survey of Computational Physics (Princeton Univ. Press, 2010)

Examination

Method Course: Theoretical Concepts and Simulation

report / work period for assignment: 4 weeks

Description:

The requirement for the credit points is based on a programming project carried out in a team of 2-3 students. The final report contains the formulation and a theoretical introduction into the problem, the numerical implementation, and the presentation of the results.

Module PHM-0223: Method Course: Tools for Scientific Computing *Method Course: Tools for Scientific Computing*	8 ECTS/LP

Version 1.1.0 (since SoSe18)
Person responsible for module: Prof. Dr. Gert-Ludwig Ingold

Contents:

Important tools for scientific computing are taught in this module and applied to specific scientific problems by the students. As far as tools depend on a particular programming language, Python will be employed. Tools to be discussed include:

- numerical libraries like NumPy and SciPy
- visualisation of numerical results
- use of a version control system like git and its application in collaborative work
- testing of code
- profiling
- documentation of programs

Learning Outcomes / Competences:

- The students are capable of solving a physical problem of some complexity by means of numerical techniques. They are able to visualize the results and to adequately document their program code.
- The students know examples of numerical libraries and are able to apply them to solve scientific problems.
- The students know methods for quality assurance like the use of unit tests. They know techniques to identify run-time problems.
- The students know a distributed version control system and are able to use it in a practical problem.
- The students have gained practical experience in a collaborative project work. They are able to plan and carry out a programming project in a small group.

Remarks:

The number of students will be limited to 12.

Workload:

Total: 240 h
60 h studying of course content (self-study)
90 h (attendance)
30 h preparation of presentations (self-study)
60 h preparation of written term papers (self-study)

Conditions: Knowledge of the programming language Python is expected on the level taught in the module PHM-0041 „Einführung in das Programmieren für Physiker und Materialwissenschaftler“.		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: irregular	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Tools for Scientific Computing
Mode of Instruction: lecture
Language: English / German
Contact Hours: 2

Learning Outcome:

- The students know the numerical libraries NumPy and SciPy and selected tools for the visualization of numerical results.
- The students know fundamental techniques for the quality assurance of programs like the use of unit tests, profiling and the use of the version control system git. They are able to adequately document their code.

Contents:

- numerical libraries NumPy and SciPy
- graphics with matplotlib
- version control system Git and workflow for Gitlab/Github
- unit tests
- profiling
- documentation using docstrings and Sphinx

Literature:

- A. Scopatz, K. D. Huff, *Effective Computation in Physics* (O'Reilly, 2015)

Part of the Module: Method Course: Tools for Scientific Computing (Practical Course)

Mode of Instruction: internship

Language: English / German

Contact Hours: 4

Learning Outcome:

- The students are capable of solving a physical problem of some complexity by means of numerical techniques and to visualize the results.
- They have gained some experience in the application of methods for quality assurance of their code and are able to appropriately document their programs.
- The students are able to work in a team and know how to make use of tools like Gitlab/Github.
- The students are able to present the status of their work, to critically assess it and to accept suggestions from others.

Contents:

The tools discussed in the lecture will be applied to specific scientific problems by small teams of 2-3 students under supervision. The teams regularly inform the other teams in oral presentations on their progress, the tools employed as well as encountered problems and their solution.

Examination

Method Course: Tools for Scientific Computing

report / work period for assignment: 4 weeks

Description:

The requirement for credit points is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Module PHM-0150: Method Course: Spectroscopy on Condensed Matter *Method Course: Spectroscopy on Condensed Matter*	8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: PD Dr. Stephan Krohns

Contents:

Dielectric Spectroscopy [8]

- Methods
- Cryo-techniques
- Measurement quantities
- Relaxation processes
- Dielectric phenomena

Ferroelectric Materials [7]

- Mechanism of ferroelectric polarization
- Hysteresis loop measurements
- Dielectric spectroscopy

Glassy Matter [8]

- Introduction
- Glassy phenomena
- Dielectric spectroscopy

Multiferroic Materials [7]

- Introduction
- Microscopic origins of multiferroicity
- Pyrocurrent measurements
- Dielectric spectroscopy

Learning Outcomes / Competences:

The students:

- learn about the basic concepts of dielectric spectroscopy and the phenomena examined with it. Therefore they are instructed in experimental methods for the investigation of the dielectric properties of condensed matter,
- are trained in planning and performing complex experiments. They learn to evaluate and analyze the collected data,
- are taught to work on problems in experimental solid state physics, including analysis of measurement results and their interpretation in the framework of models and theories.

Remarks:

ELECTIVE COMPULSORY MODULE

Workload:

Total: 240 h

Conditions: Recommended: basic knowledge in solid state physics, basic knowledge in physics of glasses and supercooled liquids		**Credit Requirements:** written report on the experiments (editing time 2 weeks)
Frequency: irregular (usu. winter semester)	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Spectroscopy on Condensed Matter
Mode of Instruction: lecture
Language: English
Contact Hours: 2

Literature:

- N.W. Ashcroft, N.D. Mermin, Festkörperphysik (Oldenbourg)
- Ch. Kittel, Einführung in die Festkörperphysik (Oldenbourg)
- C.J.F. Böttcher, P. Bordewijk, Theory of Electric Polarization (Elsevier)
- J. R. Macdonald, Impedance Spectroscopy (Wiley)
- H. Scholze, Glas (Springer)
- S.R. Elliott, Physics of Amorphous Materials (Longman)
- R. Zallen, The Physics of Amorphous Solids (Wiley)

Assigned Courses:

Method Course: Spectroscopy on Condensed Matter (lecture)
**

Part of the Module: Method Course: Spectroscopy on Condensed Matter (Practical Course)
Mode of Instruction: laboratory course
Language: English
Contact Hours: 4

Assigned Courses:

Method Course: Spectroscopy on Condensed Matter (Practical Course) (internship)
**

Examination
Method Course: Spectroscopy on Condensed Matter
oral exam / length of examination: 45 minutes
Examination Prerequisites:
Method Course: Spectroscopy on Condensed Matter

Module PHM-0258: Method course: Charge doping effects in semiconductors *Method course: Charge doping effects in semiconductors*		8 ECTS/LP
Version 1.0.0 (since SoSe21) Person responsible for module: Dr. Lilian Prodan, Dr. Somnath Ghara		

Contents:

The goal of the method course is to make students familiar with the concept of controlling the type and the concentration of charge carriers in semiconductors, which is widely used approach in electronics and various fields of materials science. For this purpose, the current method course will be dealing with the preparation of various electron-doped and / or hole-doped narrow-gap semiconductors and investigation of the influence of charge doping on transport and magnetic properties.

The following techniques will be involved:

- Synthesis of electron and hole doped narrow-gap semiconductors, such as Zn- and Ge-doped GaV4S8, in poly-crystalline forms using solid state reaction;
- Refining the structure and checking phase purity by X-ray powder diffraction;
- Resistivity and magneto-transport measurements;
- Hall effect measurements to quantify carrier concentration;
- Investigation of the doping-induced changes in the magnetic properties by magnetization measurements.

Learning Outcomes / Competences:

Students will be involved rigorously in planning Hall effect experiments, determination of the charge carrier type and density, and describe the charge doping effects in semiconductors.

By the end of the method course, students will be able to:

- Manipulate with the bulk properties of narrow-gap semiconductors via different doping techniques;
- Improve their skills in XRD and Magnetization experiments and analysis;
- Plan and perform Hall effect and magnetoresistance experiments and describe obtained experimental results;
- Describe changes in the energy structure of a semiconductor due to doping;
- Distinguish between an n-type and p-type semiconductor;
- Calculate the charge, mobility, and charge carrier density of a semiconductor using information obtained from the Hall effect experiments.

Remarks:

Module PHM-0158: Introduction to Materials (= Seminar) *Introduction to Materials*			4 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider			
Contents: Varying topics for each year, giving an overview into scope, application, requirements and preparation of all types of modern materials.			
Learning Outcomes / Competences: The students: • know the major principles, applications and processes of modern materials, • acquire the competence to compile knowledge for examples of material specific topics and to present this knowledge in given time to an audience.			
Remarks: **COMPULSORY MODULE**			
Workload: Total: 120 h			
Conditions: Recommended: basic knowledge in materials science			**Credit Requirements:** regular participation, oral presentation with term paper (30 - 45 minutes)
Frequency: each winter semester	**Recommended Semester:** from 1.		**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 2	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module PHM-0159: Laboratory Project *Laboratory Project*	10 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer

Contents:
Experimental or theoretical work in a laboratory / research group in the Institute of Physics. Has to be conducted within 3 months.

Learning Outcomes / Competences:
The students:

- know the basic terms, skills and concepts to pursuit a real research project in the existing laboratories within the research groups,
- experience the day to day life in a research group from within,
- prepare themselves to conduct a research project during their Masters thesis.

Remarks:
The Laboratory Project will be offered in SoSe 2020 as soon as the current situation allows.

COMPULSORY MODULE

Workload:
Total: 300 h

Conditions: Recommended: solid knowledge in (solid state) Physics, Chemistry and Materials Science, both experimentally and theoretically		**Credit Requirements:** 1 written report (editing time 2 weeks)
Frequency: each semester Siehe Bemerkungen	**Recommended Semester:** from 3.	**Minimal Duration of the Module:** 0 semester[s]

Module PHM-0058: Organic Semiconductors *Organic Semiconductors*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Wolfgang Brütting

Contents:
Basic concepts and applications of organic semiconductors

Introduction

- Materials and preparation
- Structural properties
- Electronic structure
- Optical and electrical properties

Devices and Applications

- Organic metals
- Light-emitting diodes
- Field-effect transistors
- Solar cells and laser

Learning Outcomes / Competences:
The students:

- know the basic structural and electronic properties of organic semiconductors as well as the essential function of organic semiconductor devices,
- have acquired skills for the classification of the materials taking into account their specific features in the functioning of components,
- and have the competence to comprehend and attend to current problems in the field of organic electronics.
- Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to interpret experimental results

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
40 h studying of course content through exercises / case studies (self-study)
40 h studying of course content using provided materials (self-study)
40 h studying of course content using literarture (self-study)

Conditions: It is strongly recommended to complete the module solid-state physics first. In addition, knowledge of molecular physics is desired.		
Frequency: every 3rd semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module PHM-0060: Low Temperature Physics *Low Temperature Physics*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Philipp Gegenwart

Contents:

- Introduction
- Properties of matter at low temperatures
- Cryoliquids and superfluidity
- Cryogenic engineering
- Thermometry
- Quantum Matter

Learning Outcomes / Competences:
The students:

know the basic properties of matter at low temperatures and the corresponding experimental techniques,
have acquired the theoretical knowledge to perform low-temperature measurements,
and know how to experimentally investigate current problems in low-temperature physics.

Workload:
Total: 180 h
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)

Conditions: Physik IV - Solid-state physics		
Frequency: every 3rd semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Low Temperature Physics
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:
see module description

Contents:

- Introduction (temperature scale, history of low temperature physics)
- Properties of matter at low temperatures (specific heat, thermal expansion, electrical resistance, thermal conductivity)
- Cryoliquids and superfluidity (nitrogen, hydrogen, 4-He and 3-He: phase diagrams, superfluidity)
- Cryogenic engineering (liquefaction of gases, helium cryostats, dilution refrigerator, adiabatic demagnetization, further techniques)
- Thermometry (primary and secondary thermometers at different temperature regimes)
- Quantum Matter (quantum Transport, Quantum phase transitions, Quantum spin liquids)

Literature:

Module PHM-0066: Superconductivity *Superconductivity*	6 ECTS/LP

Version 1.0.0 (since WS11/12)
Person responsible for module: PD Dr. Reinhard Tidecks

Contents:

- Introductory Remarks and Literature
- History and Main Properties of the Superconducting State, an Overview
- Phenomenological Thermodynamics and Electrodynamics of the SC
- Ginzburg-Landau Theory
- Microscopic Theories
- Fundamental Experiments on the Nature of the Superconducting State
- Josephson-Effects
- High Temperature Superconductors
- Application of Superconductivity

Learning Outcomes / Competences:

The students:

- will get an introduction to superconductivity,
- by a presentation of experimental results they will learn the fundamental properties of the superconducting state,
- are informed about the most important technical applications of superconductivity.
- Special attention will be drawn to the basic concepts of the main phenomeno-logical and microscopic theories of the superconducting state, to explain the experimental observations.
- For self-studies a comprehensive list of further reading will be supplied.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:

- Physik IV – Solid-state physics
- Theoretical physics I-III

Frequency: every 3rd semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Superconductivity

oral exam / length of examination: 30 minutes

Examination Prerequisites:

Superconductivity

Module PHM-0252: Optical Excitations in Materials *Optical Excitations in Materials*	6 ECTS/LP

Version 1.8.0 (since SoSe20)
Person responsible for module: Prof. Dr. Joachim Deisenhofer

Contents:

1. Classical Light-Matter Interation in Solids:

- Introduction: Typical Optical Response of Metals and Semiconductors
- Classical electromagnetic wave propagation in linear optical media (Maxwell Equations, refractive index, reflection, transmission, absorption)
- Anisotropic media, birefringence, longitudinal solutions
- Classical Drude-Lorentz oscillator model
- Spectroscopic techniques: Fourier-Transform-Spectroscopy, Time-domain Spectroscopy, Ellipsometry

2. Quantum Aspects of Light-Matter interaction

- qm approach to absorption and emission: Lorentzian lineshape, Fermi's Golden Rule
- Electric-dipole and magnetic-dipole approximation
- Rabi-oscillations and the need for quantum optical approaches
- A glimpse of non-linear optics

3. Exitations in different material classes

- Optical properties of semiconductors/insulators, molecular materials, metals
- Absorption and Luminescence, excitons, luminescence centers
- Optoelectronics, detectors, light emitting devices
- Quantum confined structures: tuning of absorption and emission

Learning Outcomes / Competences:
Students know the fundamentals of light-matter interaction in solids and gain a solid background of spectroscopic methods and optical excitations in solids. They are able to analyze materials' requirements and have the competence to select materials for different kinds of applications.

Workload:
Total: 180 h
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions:
Basic knowledge of classical electrodynamics, atomic and solid state physics.

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Optical Excitations in Materials
Mode of Instruction: lecture

individual oral exam / length of examination: 30 minutes

Module PHM-0253: Dielectric Materials *Dielectric Materials*	6 ECTS/LP

Version 1.0.0 (since SoSe20)
Person responsible for module: PD Dr. Stephan Krohns
PD Dr. Peter Lunkenheimer

Contents:

- Experimental techniques: quantities, broadband dielectric spectroscopy, nonlinear and polarization measurements
- Dynamic processes in dielectric materials: relaxation processes, phenomenological models
- Dielectric properties of disordered matter: liquids, glasses, plastic crystals
- Charge transport: hopping conductivity, universal dielectric response
- Ionic conductivity: conductivity mechanism, dielectric properties, advanced electrolytes for energy-storage devices
- Maxwell-Wagner relaxations: equivalent-circuits, applications (supercapacitors), colossal-dielectric-constant materials
- Electroceramics: Materials, Properties (relaxor ferroelectric, ferroelectric, antiferroelectric and multiferroic), Applications

Learning Outcomes / Competences:
Students know the fundamentals of electromagnetic wave propagation and have a sound background for a broad spectrum of dielectric phenomena. They are able to analyze materials requirements and have the competence to select materials for different kinds of applications.

Remarks:
Elective compulsory module

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)

Module PHM-0051: Biophysics and Biomaterials *Biophysics and Biomaterials*		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Dr. Stefan Thalhammer		
Contents: • Radiation Biophysics • Microfluidics • Membranes • Membranal transport		
Learning Outcomes / Competences: The students: • learn basic terms, concepts and phenomena of biological physics, • learn models of the (bio)polymer-theory, microfluidic, radiation biophysics, nanobiotechnology, membranes and neuronal networks, • adapt skills in the independent processing of problems and deal with current literature. They will be able to translate a biological oberservation into a physical question. • Integrated acquirement of soft skills: autonomous working with specialist literature in english, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study)		
Conditions: Mechanics, Thermodynamics, Statistical Physics, basic knowledge in Molecular Biology

Biophysics and Biomaterials

Module PHM-0059: Magnetism *Magnetism*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Dr. Hans-Albrecht Krug von Nidda

Contents:

- History, basics
- Magnetic moments, classical and quantum phenomenology
- Exchange interaction and mean-field theory
- Magnetic anisotropy and magnetoelastic effects
- Thermodynamics of magnetic systems and applications
- Magnetic domains and domain walls
- Magnetization processes and micro magnetic treatment
- AC susceptibility and ESR
- Spintransport / spintronics
- Recent problems of magnetism

Learning Outcomes / Competences:
The students:

- know the basic properties and phenomena of magnetic materials and the most important methods and concepts for their description, like mean-field theory, exchange interactions and micro magnetic models,
- have the ability to classify different magnetic phenomena and to apply the corresponding models for their interpretation, and
- have the competence independently to treat fundamental and typical topics and problems of magnetism.
- Integrated acquirement of soft skills.

Physics and Technology of Semiconductor Devices

written exam / length of examination: 90 minutes

Examination Prerequisites:

Physics and Technology of Semiconductor Devices

Module PHM-0049: Nanostructures / Nanophysics *Nanostructures / Nanophysics*		6 ECTS/LP
Version 1.1.0 (since WS09/10) Person responsible for module: Prof. Dr. István Kézsmárki		

Contents:

1. Semiconductor quantum wells, wires and dots, low dimensional electron systems
2. Magnetotransport in low-dimensional systems, Quantum-Hall-Effect, Quantized conductance
3. Optical properties of nanostructures and their application in modern optoelectonic devices, Nanophotonics
4. Fabrication and detection of nanostructures
5. Ferroic properties of nanostructures (Magnetism, Multiferroicity)

Learning Outcomes / Competences:

- Basic knowledge of the fundamental concepts in modern nanoscale science
- Profound knowledge of low-dimensional semiconductor structures and how these systems can be applied for novel functional devices for high-frequency electronics and optoelectronics
- Knowledge of different fabrication approaches using bottom-up and top-down techniques
- Application of these concepts to tackle present problems in nanophysics
- Integrated acquirement of soft skills: autonomous working with specialist literature in English, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.

Workload:

Total: 180 h

Module PHM-0203: Physics of Cells *Physics of Cells*			6 ECTS/LP
Version 1.1.0 (since WS16/17) Person responsible for module: Prof. Dr. Achim Wixforth Dr. Christoph Westerhausen			
Contents: • Physical principles in Biology • Cell components and their material properties: cell membrane, organelles, cytoskeleton • Thermodynamics of proteins and biological membranes • Physical methods and techniques for studying cells • Cell adhesion – interplay of specific, universal and elastic forces • Tensile strength and elasticity of tissue - macromolecules of the extra cellular matrix • Micro mechanics and properties of the cell as a biomaterial • Cell-cell-communication • Cell migration • Cell stimulation and cell-computer-communication			
Learning Outcomes / Competences: The students • get to know a highly interdisciplinary field of physics. • learn the basics on physical properties of human cells, as building blocks of living organisms and their material properties. • learn about the impact of forces on the behavior of living cells • learn physical description of fundamental biological processes and properties of biomaterials. • are able to express biophysical questions and define model systems to answer these questions. The students learn the following key qualifications: • self-dependent working with English specialist literature. • presentation techniques. • documentation of experimental results. • interdisciplinary thinking and working.			
Workload: 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study)			
Conditions: Mechanics, Thermodynamics			**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each winter semester	**Recommended Semester:** from 1.		**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program		

Parts of the Module
Part of the Module: Physics of Cells **Mode of Instruction:** lecture **Language:** English / German **Contact Hours:** 2

Learning Outcome:
see module description

Contents:
see module description

Literature:

- Sackmann, Erich, and Rudolf Merkel. *Lehrbuch der Biophysik*. Wiley-VCH, 2010.
- Nelson, Philip. *Biological physics*. New York: WH Freeman, 2004.
- Boal, D. *Mechanics of the Cell*. Cambridge University Press, 2012.
- Lecture notes

Part of the Module: Physics of Cells (Tutorial)
Mode of Instruction: exercise course
Language: English
Contact Hours: 2

Learning Outcome:

Contents:
see module description

Literature:
see module description

Examination
Physics of Cells
oral exam / length of examination: 30 minutes

Module PHM-0054: Chemical Physics II *Chemical Physics II*	6 ECTS/LP

Version 1.3.0 (since WS09/10)
Person responsible for module: Prof. Dr. Wolfgang Scherer
PD Dr. Georg Eickerling

Contents:

- Introduction to computational chemistry
- Hartree-Fock Theory
- DFT in a nutshell
- Prediction of reaction mechanisms
- calculation of physical and chemical properties

Learning Outcomes / Competences:

The students:

- know the basic quantum chemical methods of chemical physics to interpret the electronic structures in molecules and solid-state compounds,
- have therefore the competence to autonomously perform simple quantum chemical calculations using Hartree-Fock and Density Functional Theory (DFT) and to interpret the electronic structure of functional molecules and materials with regard to their chemical and physical properties
- Integrated acquirement of soft skills: ability to specialize in a scientific topic and to apply the acquired knowledge for solving scientific problems.

Remarks:

It is possible for students to do quantum chemical calculations autonomously and analyze electronical structures of molecules on a computer cluster within the scope of the tutorial.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:

It is highly recommended to complete the module Chemical Physics I first.

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Chemical Physics II
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:

see module description

Part of the Module: Chemical Physics II (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Learning Outcome:

see module description

Examination

Chemical Physics II

written exam / length of examination: 90 minutes

Examination Prerequisites:

Chemical Physics II

Module PHM-0161: Coordination Materials *Coordination Materials*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer
Dr. Hana Bunzen

Contents:

A) Basics of coordination Chemistry

- Historical development of coordination chemistry [2]
- Structures and nomenclature rules [2]
- Chemical bonds in transition metal coordination compounds [3]
- Stability of transition metal coordination compounds [2]
- Characteristic reactions [3]

B) Selected classes of functional materials

- Bioinorganic chemistry [3]
- Coordination polymers / metal-organic frameworks [3]
- Coordination compounds in medical applications [3]
- Photochemistry of coordination compounds [3]

Learning Outcomes / Competences:

The students

- shall acquire knowledge about concepts of chemical bonding in coordination chemistry (main emphasis: d-block transition metal compounds),
- broaden their capabilities to interpret UV/vis absorption spectra and to predict stability and reactivity of coordination compounds,
- learn how to transfer concepts of coordination chemistry onto topics of materials sciences.
- Integrated acquirement of soft skills.

Remarks:

ELECTIVE COMPULSORY MODULE

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions:

Recommended: The lecture course is based on the courses "Chemistry I", "Chemistry II"

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Coordination Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Coordination Materials

Module PHM-0113: Advanced Solid State Materials *Advanced Solid State Materials*		6 ECTS/LP
Version 1.0.0 (since WS10/11) Person responsible for module: Prof. Dr. Henning Höppe		
Contents: • Repitition of concepts • Novel silicate-analogous materials • Luminescent materials • Pigments • Heterogeneous catalysis		
Learning Outcomes / Competences: • The students are aware of correlations between composition, structures and properties of functional materials, • acquire skills to predict the properties of chemical compounds, based on their composition and structures, • gain competence to evaluate the potential of functional materials for future technological developments, and • will know how to measure the properties of these materials. • Integrated acquirement of soft skills		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study)		
Conditions: Contents of the modules Chemie I, and Chemie II or Festkörperchemie (Bachelor Physik, Bachelor Materialwissenschaften)		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Examination

Advanced Solid State Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Advanced Solid State Materials

Module PHM-0217: Advanced X-ray and Neutron Diffraction Techniques *Advanced X-ray and Neutron Diffraction Techniques*		6 ECTS/LP
Version 1.0.0 (since SoSe17) Person responsible for module: Prof. Dr. Wolfgang Scherer PD Dr. Georg Eickerling		
Contents: Subjects of the lecture are advanced X-ray and neutron diffraction techniques: • The failure of the standard *I*ndependent *A*tom *M*odel (IAM) in X-ray diffraction • Beyond the standard model: The multipolar model • How to obtain and analyze experimental charge densities • How to derive chemical and physical properties from diffraction data • Applications of joined X-ray and neutron diffraction experiments		
Learning Outcomes / Competences: The students: • gain basic theoretical knowledge on the reconstruction of accurate electron density maps from X-ray and neutron diffraction data • know the basics of the *Quantum Theory of Atoms in Molecules* • are competent to analyze the topology of the electron density and correlate it with the physical and chemical properties of materials		
Remarks: **ELECTIVE COMPULSORY MODULE**		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 60 h lecture and exercise course (attendance)		
Conditions: It is recommended to complete the Module PHM-0053 Chemical Physics I.		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]

Advanced X-ray and Neutron Diffraction Techniques

written exam / length of examination: 90 minutes

Examination Prerequisites:

Advanced X-ray and Neutron Diffraction Techniques

Module PHM-0114: Porous Functional Materials *Porous Functional Materials*	6 ECTS/LP

Version 1.0.0 (since SS11)
Person responsible for module: Prof. Dr. Dirk Volkmer

Contents:

- Overview and historical developments
- Structural families of porous frameworks
- Synthesis strategies
- Adsorption and diffusion
- Thermal analysis methods
- Catalytic properties
- Advanced applications and current trends

Learning Outcomes / Competences:

- The students shall acquire knowledge about design principles and synthesis of porous functional materials,
- broaden their capabilities to characterize porous solid state materials with special emphasis laid upon sorption and thermal analysis,
- become introduced into typical technical applications of porous solids.
- Integrated acquirement of soft skills

Remarks:

Subsequent to the lecture course, the students can take part in a hands-on method course ``Porous Materials Synthesis and Characterization'' to practice their knowledge.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions: participation in the course Materials Chemistry		**Credit Requirements:** one written examination, 90 min
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Porous Functional Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Porous Functional Materials

Module PHM-0218: Novel Methods in Solid State NMR Spectroscopy *Novel Methods in Solid State NMR Spectroscopy*		6 ECTS/LP
Version 1.0.0 (since SoSe17) Person responsible for module: Prof. Dr. Leo van Wüllen		

Contents:

The physical basis of nuclear magnetic resonance

Pulsed NMR methods; Fourier Transform NMR

Internal interactions

Magic Angle Spinning

Modern pulse sequences or how to obtain specific information about the structure and dynamics of solid materials

Recent highlights of the application of modern solid state NMR in materials science

Workload:
Total: 180 h

Conditions: none		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module PHM-0167: Oxidation and Corrosion *Oxidation and Corrosion*	6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider	

Contents:

Introduction

Review of thermodynamics

Chemical equilibria

Electrochemistry

Electrode kinetics

High temperature oxidation

Localized corrosion

- Shallow pit corrosion
- Pitting corrosion
- Crevice corrosion
- Intercrystalline corrosion
- Stress corrosion cracking
- Fatigue corrosion
- Erosion corrosion
- Galvanic corrosion

Water and seawater corrosion

Corrosion monitoring

Corrosion properties of specific materials

Specific corrosion problems in certain branches

- Oil and Gas industry
- Automobile industry
- Food industry

Corrosion protection

- Passive layers
- Reaction layers (Diffusion layers …)
- Coatings (organic, inorganic)
- Cathodic, anodic protection
- Inhibitors

Learning Outcomes / Competences:

The students:

- know the the fundamental basics, mechanics, and types of corrosion processes,
- obtain specific knowledge of one type of corrosion.

Workload:

Total: 180 h

60 h lecture and exercise course (attendance)

120 h studying of course content using provided materials (self-study)

Conditions:	**Credit Requirements:**
Recommended: good knowledge in materials science, basic knowledge in physical chemistry	written exam (90 min)

Frequency: each winter semester	**Recommended Semester:** from 3.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination
Oxidation and Corrosion
written exam / length of examination: 90 minutes
Examination Prerequisites:
Oxidation and Corrosion

Module PHM-0264: Functional and Smart Macromolecular Materials		6 ECTS/LP
Version 1.0.0 (since WS21/22) Person responsible for module: PD Dr. Klaus Ruhland		

Contents:

Electro-active polymeric materials

- Intrinsically electric conducting polymers (ICPs)
- Working principles of ICPs in selected applications
- Red/Ox-responsive ICPs
- Electrochromism
- Electroactive Actuators
- Non-electric-conducting electrically functional polymers
- Ferroelectric polymers
- Piezoelectric polymers
- Dielectric elastomers

Thermo-active polymeric materials

- Difference between invertibility and reversibility
- Pyro-electric effect vs electro-caloric effect
- High-temperature-stabile polymers
- Thermochromic polymers

Mechano-active polymeric materials

- Shape-Memory-polymers
- Self-healing polymers

Photo-active polymeric materials

- Important chromophors and switching mechanisms
- Photo-responsive polymerization initiators and catalysts

Smart polymer gels

- Thermo-responsive polymer gels (LCST/UCST)
- Electrically charged polymer gels
- pH-responsive polymer gels

Learning Outcomes / Competences:

It will be explained how functional properties can be implemented into polymeric materials and how the polymeric material can be designed to contain molecular switches which by action of an external stimulus (electric, thermal, mechanic, chemical) tunes the property profile of the material space and time resolved (implementation of smart behaviour).

Examples for applications of this type of material design will be discussed.

Workload:

Total: 180 h

80 h studying of course content using provided materials (self-study)

20 h studying of course content using literarture (self-study)

60 h lecture (attendance)

20 h exercise course (attendance)

Conditions: none		**Credit Requirements:** Bestehen der Modulprüfung

Examination

Functional and Smart Macromolecular Materials
written exam / length of examination: 90 minutes

Module MRM-0126: Ceramic Matrix Composites *Keramische Faserverbundwerkstoffe*		6 ECTS/LP
Version 3.0.0 (since WS21/22) Person responsible for module: Prof. Dr. Dietmar Koch		
Learning Outcomes / Competences: The students will achieve knowledge the following topics: • Processing chain of ceramic matrix composites (CMC) from raw materials to product • Processing and properties of ceramic fibers • Principal mechanisms of reinforcement in CMC • Properties of CMC • Application of CMC		
Conditions: Recommended: basic knowledge of materials		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Vorlesung Keramische Faserverbundwerkstoffe
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Contents:

In the lecture basic knowledge will be developed how to manufacture CMC and how microstructural properties will be adjusted that they perform in application as desired. CMC are being developed for application as parts for space vehicles, satellite propulsion, aero engines, components for high temperature treatment, components for frictional application and other application where high temperatures and severe atmospheres occur.

The following topics will be addressed:

- Fiber processing
- Fiber properties
- Manufacturing of CMC
- Properties of CMC
- Interfacial properties
- Modelling
- Simulation
- Coatings
- Nondestructive testing methods
- Application

**

Examination

Keramische Faserverbundwerkstoffe

written exam / length of examination: 60 minutes

Parts of the Module

Part of the Module: Übung Keramische Faserverbundwerkstoffe

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Contents:

In the exercise the students will learn how to design CMC for desired properties. Case studies will be discussed and literature on the cutting edge will be evaluated.

Module PHM-0164: Characterization of Composite Materials *Characterization of Composite Materials*		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Markus Sause		
Contents: The following topics are presented: • Introduction to composite materials • Applications of composite materials • Mechanical testing • Thermophysical testing • Nondestructive testing		
Learning Outcomes / Competences: The students: • acquire knowledge in the field of materials testing and evaluation of composite materials. • are introduced to important concepts in measurement techniques, and material models applied to composites. • are able to independently acquire further information of the scientific topic using various forms of information.		
Workload: Total: 180 h 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Recommended: basic knowledge in materials science, particularly in composite materials		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Characterization of Composite Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Characterization of Composite Materials

Module PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties *Fiber Reinforced Composites: Processing and Materials Properties*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Dr. Judith Moosburger-Will
Prof. Dr. Siegfried Horn

Contents:
The following topics are treated:

- production of fibers (e.g. glass, carbon, or ceramic fibers)
- Physical and chemical properties of fibers and their precursor materials
- Physical and chemical properties of commonly used polymeric and ceramic matrix materials
- Semi-finished products
- Composite production technologies
- Application of fiber reinforced materials

Learning Outcomes / Competences:
The students:

- know the application areas of composite materials.
- know the basics of production technologies of fibers, polymeric, and ceramic matrices and fiber reinforced materials.
- are introduced to physical and chemical properties of fibers, matrices, and fiber reinforced materials.
- are able to independently acquire further knowledge of the scientific topic using various forms of information.

Examination

Functional Polymers

written exam / length of examination: 90 minutes

Examination Prerequisites:

Functional Polymers

Module PHM-0122: Non-Destructive Testing *Non-Destructive Testing*	6 ECTS/LP

Version 1.0.0 (since WS14/15)
Person responsible for module: Prof. Dr. Markus Sause

Contents:

- Introduction to nondestructive testing methods
- Visual inspection
- Ultrasonic testing
- Guided wave testing
- Acoustic emission analysis
- Thermography
- Radiography
- Eddy current testing
- Specialized nondestructive methods

Learning Outcomes / Competences:

The students

- acquire knowledge in the field of nondestructive evaluation of materials,
- are introduced to important concepts in nondestructive measurement techniques,
- are able to independently acquire further knowledge of the scientific topic using various forms of information.
- Integrated acquirement of soft skills

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions:

Basic knowledge on materials science, in particular composite materials

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Non-Destructive Testing

Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:

see module description

Contents:

see module description

Literature:

- Raj: Practical Non-destructive Testing
- Shull: Nondestructive Evaluation - Theory and Applications
- Krautkrämer: Ultrasonic testing of materials
- Grosse: Acoustic Emission Testing
- Rose: Ultrasonic waves in solid media
- Maldague: Nondestructive Evaluation of Materials by Infrared Thermography
- Herman: Fundamentals of Computerized Tomography

Further literature - actual scientific papers and reviews - will be announced at the beginning of the lecture.

Assigned Courses:

Non-Destructive Testing (lecture)

(online/digital)

Part of the Module: Non-Destructive Testing (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Examination

Non-Destructive Testing

written exam / length of examination: 90 minutes

Examination Prerequisites:

Non-Destructive Testing

Module PHM-0168: Modern Metallic Materials *Modern Metallic Materials*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Ferdinand Haider

Contents:
Introduction

Review of physical metallurgy

Steels:

- principles
- common alloying elements
- martensitic transformations
- dual phase steels
- TRIP and TWIP steels
- maraging steel
- electrical steel
- production and processing

Aluminium alloys:

- 2xxx
- 6xxx
- 7xxx
- Processing – creep forming, hydroforming, spinforming

Titanium alloys

Magnesium cast alloys

Superalloys

Intermetallics, high entropy alloys

Copper, brass, bronzes

Metallic glasses

Alloy design

Learning Outcomes / Competences:
Students

- learn about all kinds of actual metallic alloys, their properties and how these properties can be derived from basic concepts

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions:
Recommended: Knowledge of physical metallurgy and physical chemistry

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]

Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Modern Metallic Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Modern Metallic Materials

Module PHM-0196: Surfaces and Interfaces II: Joining processes *Surfaces and Interfaces II: Joining processes*		6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: Dr. Judith Moosburger-Will Dozenten: Prof. Dr. Siegfried Horn, Dr. Judith Moosburger-Will		
Learning Outcomes / Competences: The students - know the application areas of composite materials - know the basics of cohesion and adhesion - know the basics of joining techniques - are introduced to physical and chemical properties metal-metal, metal-polymer and polymer-polymer interfaces - Are able to independently acquire further knowledge of the scientific topic using various forms of information.		
Workload: Total: 180 h		
Conditions: Basic knowledge on materials science, lecture “Surfaces and Interfaces I” Module Surfaces and Interfaces (PHM-0117) - recommended		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Surfaces and Interfaces II: Joining processes

Mode of Instruction: lecture
Lecturers: Prof. Dr. Siegfried Horn
Language: German
Contact Hours: 3

Contents:

The following topics are treated:

- Introduction to adhesion
- Role of surface and interface properties
- Introduction to interactions at surfaces and interfaces
- Adhesion theories
- Surface and interface energy
- Surface treatment techniques
- Joining techniques
- Physical and chemical properties of joints
- Applications

Lehr-/Lernmethoden:

Lecture: Beamer presentation and Blackboard
Exercise: Exercises on recent topics, specialization of lecture contents

Literature:

Literature, including actual scientific papers and reviews, will be announced at the beginning of the lecture.

Examination

Surfaces and Interfaces II: Joining processes

written exam / length of examination: 90 minutes

Examination Prerequisites:

Surfaces and Interfaces II: Joining processes

Parts of the Module

Part of the Module: Übung zu Surfaces and Interfaces II: Joining processes

Mode of Instruction: exercise course

Language: German

Contact Hours: 1

Module MRM-0136: Mechanical Characterization of Materials

Mechanical Characterization of Materials

6 ECTS/LP

Version 1.0.0 (since SoSe21)

Person responsible for module: Prof. Dr. Markus Sause

Contents:

The following topics are presented:

- Introduction to material characterization
- Linear material behaviour
- Non-linear material behaviour
- Material failure
- Tensile testing
- Compression testing
- Shear testing
- Other static testing concepts
- Fracture mechanics
- Damage tolerance
- Microstructural properties
- Micromechanics
- Creep testing
- Fatigue testing
- High-Velocity testing

Learning Outcomes / Competences:

The students:

- Acquire knowledge in the field of materials testing and evaluation of materials.
- Are introduced to important concepts in measurement techniques, and material models.
- Are able to independently acquire further knowledge of the scientific topic using various forms of information.

Workload:

Total: 180 h

80 h studying of course content through exercises / case studies (self-study)

20 h studying of course content using provided materials (self-study)

20 h studying of course content using literarture (self-study)

60 h lecture and exercise course (attendance)

Conditions: None		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module MRM-0126: Ceramic Matrix Composites *Keramische Faserverbundwerkstoffe*		6 ECTS/LP
Version 3.0.0 (since WS21/22) Person responsible for module: Prof. Dr. Dietmar Koch		
Learning Outcomes / Competences: The students will achieve knowledge the following topics: • Processing chain of ceramic matrix composites (CMC) from raw materials to product • Processing and properties of ceramic fibers • Principal mechanisms of reinforcement in CMC • Properties of CMC • Application of CMC		
Conditions: Recommended: basic knowledge of materials		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Vorlesung Keramische Faserverbundwerkstoffe

Mode of Instruction: lecture

Language: English

Contact Hours: 3

Contents:

In the lecture basic knowledge will be developed how to manufacture CMC and how microstructural properties will be adjusted that they perform in application as desired. CMC are being developed for application as parts for space vehicles, satellite propulsion, aero engines, components for high temperature treatment, components for frictional application and other application where high temperatures and severe atmospheres occur.

The following topics will be addressed:

- Fiber processing
- Fiber properties
- Manufacturing of CMC
- Properties of CMC
- Interfacial properties
- Modelling
- Simulation
- Coatings
- Nondestructive testing methods
- Application

Literature:

N.P. Bansal, J. Lamon, Ceramic Matrix Composites: Materials, Modeling and Technology. John Wiley & Sons, Inc., 2015.

Assigned Courses:

Keramische Faserverbundwerkstoffe (lecture + exercise)

**

Examination

Keramische Faserverbundwerkstoffe

written exam / length of examination: 60 minutes

Parts of the Module

Part of the Module: Übung Keramische Faserverbundwerkstoffe

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Contents:

In the exercise the students will learn how to design CMC for desired properties. Case studies will be discussed and literature on the cutting edge will be evaluated.

Module MRM-0142: Complex 3D Structures and Components from 2D Materials		6 ECTS/LP
Version 1.0.0 Person responsible for module: Prof. Dr.-Ing. Suelen Barg		

Learning Outcomes / Competences:

The assembly of graphene and related two-dimensional (2D) Materials into three-dimensional (3D) architectures enables the realization of transformative materials with a unique combination of thermal, electrical and mechanical properties. This unit covers 2D materials and their 3D assembly as an advanced topic in materials science using a research-focused teaching approach. It aims to:

- Provide an introduction to 2D materials and present the motivations in assembling them in 3D with an overview of their demands for future technological applications (from energy to bio-medical);
- Deliver an understanding of the processing routes that can be used to produce 3D architectures with focus on the underpinning principles of wet processing;
- Demonstrate using research-based examples how processing can control structure in multiple scales and hence properties of components and devices.

By completing this unit, you should be able to:

- Identify the classes of nanomaterials depending on their dimensionality and the different families of 2D materials beyond graphene including transition metal dicalcogenides (TMDs), carbides and/or nitrides (MXenes).
- Summarize top-down and bottom-up synthesis strategies towards 2D materials, being able to select appropriate syntheses routes for a given application based on property requirements and cost efficiency of the approach.
- Explain the basic principles, advantages and disadvantages of innovative colloidal processing routes applied to 2D materials-based 3D structures, from tape and freeze casting to 3D printing.
- Evaluate the implications of microstructural complexity to improve materials properties and device efficiencies using real examples from the literature.

Workload:
Total: 180 h

Conditions: materials science basic knowledge		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each winter semester	**Recommended Semester:** from 3.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Complex 3D Structures and Components from 2D Materials

Mode of Instruction: lecture
Lecturers: Prof. Dr.-Ing. Suelen Barg
Language: English

Contents:

1. Nanomaterials and their Dimensionality
2. Two-Dimensional Materials synthesis methods
3. From 2D to 3D: motivations to produce 3D structures with 2D Materials
4. Graphene oxide and MXenes as Colloidal building blocks
5. Colloidal processing routes: self-assembly, templating, 3D printing
6. Multi-functional Aerogels and Composites
7. Functionality and Applications from Energy to Regenerative Medicine

Literature:

Nanotechnology: principles and Practice (3rdEdn), DOI: 10.1007/978-3-319-09171-6

Printing of Graphene and Related 2D Materials, DOI: 10.1007/978-3-319-91572-2

Research Papers presented in class

Assigned Courses:

Complex 3D Structures and Components from 2D Materials (lecture)

**(online/digital) **

Examination

Complex 3D Structures and Components from 2D Materials

written exam / length of examination: 1 hours

Module PHM-0252: Optical Excitations in Materials

Optical Excitations in Materials

6 ECTS/LP

Version 1.8.0 (since SoSe20)
Person responsible for module: Prof. Dr. Joachim Deisenhofer

Contents:

1. Classical Light-Matter Interation in Solids:

- Introduction: Typical Optical Response of Metals and Semiconductors
- Classical electromagnetic wave propagation in linear optical media (Maxwell Equations, refractive index, reflection, transmission, absorption)
- Anisotropic media, birefringence, longitudinal solutions
- Classical Drude-Lorentz oscillator model
- Spectroscopic techniques: Fourier-Transform-Spectroscopy, Time-domain Spectroscopy, Ellipsometry

2. Quantum Aspects of Light-Matter interaction

- qm approach to absorption and emission: Lorentzian lineshape, Fermi's Golden Rule
- Electric-dipole and magnetic-dipole approximation
- Rabi-oscillations and the need for quantum optical approaches
- A glimpse of non-linear optics

3. Exitations in different material classes

- Optical properties of semiconductors/insulators, molecular materials, metals
- Absorption and Luminescence, excitons, luminescence centers
- Optoelectronics, detectors, light emitting devices
- Quantum confined structures: tuning of absorption and emission

Learning Outcomes / Competences:
Students know the fundamentals of light-matter interaction in solids and gain a solid background of spectroscopic methods and optical excitations in solids. They are able to analyze materials' requirements and have the competence to select materials for different kinds of applications.

Workload:
Total: 180 h
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions:
Basic knowledge of classical electrodynamics, atomic and solid state physics.

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Optical Excitations in Materials
Mode of Instruction: lecture
Language: English
Contact Hours: 4
ECTS Credits: 6.0

Literature:

1. Mark Fox, Optical Properties of Solids, Oxford Master Series
2. Mark Fox, Quantum Optics: An Introduction, Oxford Master Series

Examination

Optical Excitations in Materials

individual oral exam / length of examination: 30 minutes

Module PHM-0253: Dielectric Materials *Dielectric Materials*	6 ECTS/LP

Version 1.0.0 (since SoSe20)
Person responsible for module: PD Dr. Stephan Krohns
PD Dr. Peter Lunkenheimer

Contents:

- Experimental techniques: quantities, broadband dielectric spectroscopy, nonlinear and polarization measurements
- Dynamic processes in dielectric materials: relaxation processes, phenomenological models
- Dielectric properties of disordered matter: liquids, glasses, plastic crystals
- Charge transport: hopping conductivity, universal dielectric response
- Ionic conductivity: conductivity mechanism, dielectric properties, advanced electrolytes for energy-storage devices
- Maxwell-Wagner relaxations: equivalent-circuits, applications (supercapacitors), colossal-dielectric-constant materials
- Electroceramics: Materials, Properties (relaxor ferroelectric, ferroelectric, antiferroelectric and multiferroic), Applications

Learning Outcomes / Competences:
Students know the fundamentals of electromagnetic wave propagation and have a sound background for a broad spectrum of dielectric phenomena. They are able to analyze materials requirements and have the competence to select materials for different kinds of applications.

Remarks:
Elective compulsory module

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions:
Basic knowledge of solid state physics

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination
Dielectric Materials Dielectric Materials
presentation / length of examination: 45 minutes
Examination Prerequisites:
Dielectric Materials

Module PHM-0166: Carbon-based functional Materials (Carboterials) *Carbon-based functional Materials (Carboterials)*		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		

Contents:

1. Introduction to carbon allotropes and porous carbon materials [4]

2. Physical properties of fullerenes, carbon nanotubes and graphene [4]

3. Solid state NMR spectroscopy of carbon materials [4]

4. Metal carbides [4]

5. Carbon thin films and coatings [4]

6. Manufacturing and processing technology of carbon fibres [4]

7. Carbon-fibre reinforced polymer composites [4]

8. Carbon-fibre reinforced aluminium (Metal Matrix Composites, MMC) [4]

9. Energy storage in carbon materials [4]

10. Carbon-based materials for opto-electronics [4]

11. Quantum transport phenomena relating to carbon materials [4]

12. a) Manipulating heat flow with carbon-based electronic analogs: phononics in place of electronics [2]

12. b) Carbon-based spintronics [2]

13. Fabrication and processing of carbon-based nanostructures [4]

Learning Outcomes / Competences:

The students:

- know the basics of the chemistry and physics of carbon materials and their applications,
- acquire knowledge about the structural characterization, physical properties and engineering of functional materials and carbon based devices,
- learn to work with specialist literature in english.

Workload:

Total: 180 h
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
60 h lecture and exercise course (attendance)

Conditions: none		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]

Mode of Instruction: lecture

Language: English

Contact Hours: 4

Literature:

will be announced by the lecturers

Examination

Carbon-based functional Materials (Carboterials)

written exam / length of examination: 120 minutes

Examination Prerequisites:

Carbon-based functional Materials (Carboterials)

Module PHM-0174: Theoretical Concepts and Simulation *Theoretical Concepts and Simulation*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Liviu Chioncel

Contents:

1. Introduction: operating systems, programming languages, data visualization tools
2. Basic numerical methods: interpolation, integration
3. Ordinary and Partial Differential Equations (e.g., diffusion equation, Schrödinger equation)
4. Molecular dynamics
5. Monte Carlo simulations

Learning Outcomes / Competences:
The students:

- know the principal concepts of thermodynamics and statistical physics as well as the numerical methods relevant in material science,
- are able to solve simple problems numerically. They are able to write the codes and to present the results,
- have the expertise to find the numerical method appropriate for the given problem and to judge the quality and validity of the numerical results,
- Integrated acquirement of soft skills: independent handling of hard- and software while using English documentations, ability to investigate abstract circumstances with the help of a computer and present the results in written and oral form, capacity for teamwork.

Remarks:

seminar / length of examination: 30 minutes

Examination Prerequisites:
Theoretical Concepts and Simulation

Module PHM-0058: Organic Semiconductors *Organic Semiconductors*		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Brütting		

Contents:

Basic concepts and applications of organic semiconductors

Introduction

- Materials and preparation
- Structural properties
- Electronic structure
- Optical and electrical properties

Devices and Applications

- Organic metals
- Light-emitting diodes
- Field-effect transistors
- Solar cells and laser

Learning Outcomes / Competences:

The students:

- know the basic structural and electronic properties of organic semiconductors as well as the essential function of organic semiconductor devices,
- have acquired skills for the classification of the materials taking into account their specific features in the functioning of components,
- and have the competence to comprehend and attend to current problems in the field of organic electronics.
- Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to interpret experimental results

Workload:

Total: 180 h

60 h lecture and exercise course (attendance)

40 h studying of course content through exercises / case studies (self-study)

40 h studying of course content using provided materials (self-study)

40 h studying of course content using literarture (self-study)

Conditions: It is strongly recommended to complete the module solid-state physics first. In addition, knowledge of molecular physics is desired.		
Frequency: every 3rd semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Organic Semiconductors

Module PHM-0066: Superconductivity *Superconductivity*	6 ECTS/LP

Version 1.0.0 (since WS11/12)
Person responsible for module: PD Dr. Reinhard Tidecks

Contents:

- Introductory Remarks and Literature
- History and Main Properties of the Superconducting State, an Overview
- Phenomenological Thermodynamics and Electrodynamics of the SC
- Ginzburg-Landau Theory
- Microscopic Theories
- Fundamental Experiments on the Nature of the Superconducting State
- Josephson-Effects
- High Temperature Superconductors
- Application of Superconductivity

Learning Outcomes / Competences:

The students:

- will get an introduction to superconductivity,
- by a presentation of experimental results they will learn the fundamental properties of the superconducting state,
- are informed about the most important technical applications of superconductivity.
- Special attention will be drawn to the basic concepts of the main phenomeno-logical and microscopic theories of the superconducting state, to explain the experimental observations.
- For self-studies a comprehensive list of further reading will be supplied.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:

Module PHM-0060: Low Temperature Physics *Low Temperature Physics*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Philipp Gegenwart

Contents:

- Introduction
- Properties of matter at low temperatures
- Cryoliquids and superfluidity
- Cryogenic engineering
- Thermometry
- Quantum Matter

Learning Outcomes / Competences:

The students:

know the basic properties of matter at low temperatures and the corresponding experimental techniques,
have acquired the theoretical knowledge to perform low-temperature measurements,
and know how to experimentally investigate current problems in low-temperature physics.

Workload:

Total: 180 h
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)

Module PHM-0114: Porous Functional Materials *Porous Functional Materials*		6 ECTS/LP
Version 1.0.0 (since SS11) Person responsible for module: Prof. Dr. Dirk Volkmer		
Contents: • Overview and historical developments • Structural families of porous frameworks • Synthesis strategies • Adsorption and diffusion • Thermal analysis methods • Catalytic properties • Advanced applications and current trends		
Learning Outcomes / Competences: • The students shall acquire knowledge about design principles and synthesis of porous functional materials, • broaden their capabilities to characterize porous solid state materials with special emphasis laid upon sorption and thermal analysis, • become introduced into typical technical applications of porous solids. • Integrated acquirement of soft skills		
Remarks: Subsequent to the lecture course, the students can take part in a hands-on method course ``Porous Materials Synthesis and Characterization'' to practice their knowledge.		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study)		
Conditions: participation in the course Materials Chemistry		**Credit Requirements:** one written examination, 90 min
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Porous Functional Materials

Mode of Instruction: lecture

Language: English

Contact Hours: 4

Contents:

see module description

Literature:

- Paul A. Wright, Microporous Framework Solids (RSC Materials Monographs, 2008)
- selected reviews and journal articles cited on the slides

Assigned Courses:

Porous Functional Materials (lecture)

**

Examination

Porous Functional Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Porous Functional Materials

Module PHM-0068: Spintronics *Spintronics*	6 ECTS/LP

Version 1.0.0 (since SoSe14)
Person responsible for module: PD Dr. German Hammerl

Contents:

- Introduction into magnetism
- Basic spintronic effects and devices
- Novel materials for spintronic applications
- Spin-sensitive experimental methods
- Semiconductor based spintronics

Learning Outcomes / Competences:

The students:

- know the fundamental properties of magnetic materials, the basic spintronic effects, and the related device structures,
- have acquired skills in identifying materials with respect to their applicability for spintronic devices,
- and have the competence to deal with current problems in the field of semi-conductor and metal based spintronics largely autonomous.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)

Conditions: none		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Spintronics
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:

see module description

Contents:

see module description

Mode of Instruction: exercise course
Language: English
Contact Hours: 1

Examination
Spintronics
written exam / length of examination: 90 minutes
Examination Prerequisites:
Spintronics

Module PHM-0057: Physics of Thin Films *Physics of Thin Films*		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: PD Dr. German Hammerl		

Contents:

- Layer growth
- Thin film technology
- Analysis of thin films
- Properties and applications of thin films

Learning Outcomes / Competences:

The students:

- know methods of thin film technology and material properties and applications of thin films,
- have acquired skills of grouping the various technologies for producing thin layers with respect to their properties and applications, and
- have the competence to deal with current problems in the field of thin film technology largely autonomous.
- Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to interpret experimental results.

Workload:

Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)

Conditions: none		
Frequency: every 3rd semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Examination

Physics of Thin Films

written exam / length of examination: 90 minutes

Examination Prerequisites:

Physics of Thin Films

Module PHM-0056: Ion-Solid Interaction *Ion-Solid Interaction*		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: apl. Prof. Dr. Helmut Karl		
Contents: • Introduction (areas of scientific and technological application, principles) • Fundamentals of atomic collision processes (scattering, cross-sections, energy loss models, potentials in binary collision models) • Ion-induced modification of solids (integrated circuit fabrication with emphasis on ion induced phenomena, ion implantation, radiation damage, ion milling and etching (RIE), sputtering, erosion, deposition) • Transport phenomena • Analysis with ion beams		
Learning Outcomes / Competences: The students: • know the physical principles and the basical mechanisms of the interaction between particles and solid state bodies in the energy range of eV to MeV, • are able to choose adequate physical models for specific technological and scientific applications, and • have the competence to work extensively autonomous on problems concerning the interaction between ions and solid state bodies. • Integrated acquirement of soft skills.		
Workload: Total: 180 h 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Basic Courses in Physics I–IV, Solid State Physics, Nuclear Physics		
Frequency: annually	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Ion-Solid Interaction **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3
Learning Outcome: see module description
Contents: see module description

Examination

Ion-Solid Interaction

written exam / length of examination: 90 minutes

Examination Prerequisites:

Ion-Solid Interaction

Module PHM-0069: Applied Magnetic Materials and Methods *Applied Magnetic Materials and Methods*		6 ECTS/LP
Version 1.0.0 (since WS14/15) Person responsible for module: Prof. Dr. Manfred Albrecht		
Contents: • Basics of magnetism • Ferrimagnets, permanent magnets • Magnetic nanoparticles • Superparamagnetism • Exchange bias effect • Magnetoresistance, sensors • Experimental methods (e.g. Mößbauer Spectroscopy, mu-SR)		
Learning Outcomes / Competences: • The students know the basic terms and concepts of magnetism, • get a profound understanding of basic physical relations and their applications, • acquire the ability to describe qualitative observations, interpret quantitative measurements, and develop mathematical descriptions of physical effects of chosen magnetic material systems. • Integrated acquirement of soft skills: autonomous working with specialist literature in English, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Basics in solid state physics		
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Applied Magnetic Materials and Methods **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3
Learning Outcome: see module description
Contents: see module description
Literature: to be announced at the beginning of the lecture

Part of the Module: Applied Magnetic Materials and Methods (Tutorial)
Mode of Instruction: exercise course
Language: English
Contact Hours: 1

Examination
Applied Magnetic Materials and Methods
oral exam / length of examination: 30 minutes
Examination Prerequisites:
Applied Magnetic Materials and Methods

Module PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons *Solid State Spectroscopy with Synchrotron Radiation and Neutrons*		6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Christine Kuntscher

Contents:

1. Electromagnetic radiation: description, generation, detection [5]
2. Spectral analysis of electromagnetic radiation: monochromators, spectrometer, interferometer [2]
3. Excitations in the solid state: Dielectric function [2]
4. Infrared spectroscopy
5. Ellipsometry
6. Photoemission spectroscopy
7. X-ray absorption spectroscopy
8. Neutrons: Sources, detectors
9. Neutron scattering

Learning Outcomes / Competences:
The students:

- know the basics of spectroscopy and important instrumentation and methods,
- have acquired the skills of formulating a mathematical-physical ansatz in spectroscopy and can apply these in the field of solid state spectroscopy,
- have the competence to deal with current problems in solid state spectroscopy autonomously, and are able to judge proper measurement methods for application.
- Integrated acquirement of soft skills.

Workload:
Total: 180 h
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)

Conditions:
basic knowledge in solid-state physics

Frequency: annually	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Solid State Spectroscopy with Synchrotron Radiation and Neutrons
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:

Contact Hours: 1

Examination

Solid State Spectroscopy with Synchrotron Radiation and Neutrons

oral exam / length of examination: 30 minutes

Examination Prerequisites:

Solid State Spectroscopy with Synchrotron Radiation and Neutrons

Module PHM-0051: Biophysics and Biomaterials *Biophysics and Biomaterials*	6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Dr. Stefan Thalhammer	

Contents:

- Radiation Biophysics
- Microfluidics
- Membranes
- Membranal transport

Learning Outcomes / Competences:

The students:

- learn basic terms, concepts and phenomena of biological physics,
- learn models of the (bio)polymer-theory, microfluidic, radiation biophysics, nanobiotechnology, membranes and neuronal networks,
- adapt skills in the independent processing of problems and deal with current literature. They will be able to translate a biological oberservation into a physical question.
- Integrated acquirement of soft skills: autonomous working with specialist literature in english, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)

Conditions:

Mechanics, Thermodynamics, Statistical Physics, basic knowledge in Molecular Biology

Frequency: each semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Biophysics and Biomaterials
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:

see module description

Contents:

- Radiation Biophysics
  - Radiation sources
  - Interaction of radiation with biological matter
  - Radiation protection principles
  - Low dose radiation
  - LNT model in radiation biophysics
- Microfluidics
  - Life at Low Reynolds Numbers
  - The Navier-Stokes Equation
  - Low Reynolds Numbers – The Stokes Equation
  - Breaking the Symmetry
- Membranes
  - Thermodynamics and Fluctuations
  - Thermodynamics of Interfaces
  - Phase Transitions – 2 state model
  - Lipid membranes and biological membranes, membrane elasticity
- Membranal transport
  - Random walk, friction and diffusion
  - Transmembranal ionic transport and ion channels
  - Electrophysiology of cells
  - Neuronal Dynamics

Examination

Biophysics and Biomaterials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Biophysics and Biomaterials

Module PHM-0059: Magnetism *Magnetism*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Dr. Hans-Albrecht Krug von Nidda

Contents:

- History, basics
- Magnetic moments, classical and quantum phenomenology
- Exchange interaction and mean-field theory
- Magnetic anisotropy and magnetoelastic effects
- Thermodynamics of magnetic systems and applications
- Magnetic domains and domain walls
- Magnetization processes and micro magnetic treatment
- AC susceptibility and ESR
- Spintransport / spintronics
- Recent problems of magnetism

Learning Outcomes / Competences:

The students:

- know the basic properties and phenomena of magnetic materials and the most important methods and concepts for their description, like mean-field theory, exchange interactions and micro magnetic models,
- have the ability to classify different magnetic phenomena and to apply the corresponding models for their interpretation, and
- have the competence independently to treat fundamental and typical topics and problems of magnetism.
- Integrated acquirement of soft skills.

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)

Conditions: basics of solid-state physics and quantum mechanics		
Frequency: annually	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]

Magnetism

Module PHM-0048: Physics and Technology of Semiconductor Devices *Physics and Technology of Semiconductor Devices*		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: apl. Prof. Dr. Helmut Karl		
Contents: 1. Basic properties of semiconductors (electronic bandstructure, doping, carrier excitations and carrier transport) 2. Semiconductor diodes and transistors 3. Semiconductor technology		
Learning Outcomes / Competences: • Basic knowledge of solid-state and semiconductor physics such as electronic bandstructure, doping, carrier excitations, and carrier transport. • Application of developed concepts (effective mass, quasi-Fermi levels) to describe the basic properties of semiconductors. • Application of these concepts to describe and understand the operation principles of semiconductor devices such as diodes and transistors • Knowledge of the technologically relevant methods and tools in semiconductor micro- and nanofabrication. • Integrated acquisition of soft skills: autonomous working with specialist literature in English, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: recommended prerequisites: basic knowledge in solid state physics, statistical physics and quantum mechanics.		
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Physics and Technology of Semiconductor Devices

written exam / length of examination: 90 minutes

Examination Prerequisites:

Physics and Technology of Semiconductor Devices

Module PHM-0049: Nanostructures / Nanophysics *Nanostructures / Nanophysics*		6 ECTS/LP
Version 1.1.0 (since WS09/10) Person responsible for module: Prof. Dr. István Kézsmárki		
Contents: 1. Semiconductor quantum wells, wires and dots, low dimensional electron systems 2. Magnetotransport in low-dimensional systems, Quantum-Hall-Effect, Quantized conductance 3. Optical properties of nanostructures and their application in modern optoelectonic devices, Nanophotonics 4. Fabrication and detection of nanostructures 5. Ferroic properties of nanostructures (Magnetism, Multiferroicity)		
Learning Outcomes / Competences: • Basic knowledge of the fundamental concepts in modern nanoscale science • Profound knowledge of low-dimensional semiconductor structures and how these systems can be applied for novel functional devices for high-frequency electronics and optoelectronics • Knowledge of different fabrication approaches using bottom-up and top-down techniques • Application of these concepts to tackle present problems in nanophysics • Integrated acquirement of soft skills: autonomous working with specialist literature in English, acquisition of presentation techniques, capacity for teamwork, ability to document experimental results, and interdisciplinary thinking and working.		
Workload: Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study)		
Conditions: recommended prerequisites: basic knowledge in solid-state physics and quantum mechanics.

Examination Prerequisites:

Nanostructures / Nanophysics

Module PHM-0054: Chemical Physics II *Chemical Physics II*		6 ECTS/LP
Version 1.3.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Scherer PD Dr. Georg Eickerling		
Contents: • Introduction to computational chemistry • Hartree-Fock Theory • DFT in a nutshell • Prediction of reaction mechanisms • calculation of physical and chemical properties		
Learning Outcomes / Competences: The students: • know the basic quantum chemical methods of chemical physics to interpret the electronic structures in molecules and solid-state compounds, • have therefore the competence to autonomously perform simple quantum chemical calculations using Hartree-Fock and Density Functional Theory (DFT) and to interpret the electronic structure of functional molecules and materials with regard to their chemical and physical properties • Integrated acquirement of soft skills: ability to specialize in a scientific topic and to apply the acquired knowledge for solving scientific problems.		
Remarks: It is possible for students to do quantum chemical calculations autonomously and analyze electronical structures of molecules on a computer cluster within the scope of the tutorial.		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study)		
Conditions: It is highly recommended to complete the module Chemical Physics I first.		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Chemical Physics II

written exam / length of examination: 90 minutes

Examination Prerequisites:

Chemical Physics II

Module PHM-0161: Coordination Materials *Coordination Materials*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer
Dr. Hana Bunzen

Contents:

A) Basics of coordination Chemistry

- Historical development of coordination chemistry [2]
- Structures and nomenclature rules [2]
- Chemical bonds in transition metal coordination compounds [3]
- Stability of transition metal coordination compounds [2]
- Characteristic reactions [3]

B) Selected classes of functional materials

- Bioinorganic chemistry [3]
- Coordination polymers / metal-organic frameworks [3]
- Coordination compounds in medical applications [3]
- Photochemistry of coordination compounds [3]

Learning Outcomes / Competences:

The students

- shall acquire knowledge about concepts of chemical bonding in coordination chemistry (main emphasis: d-block transition metal compounds),
- broaden their capabilities to interpret UV/vis absorption spectra and to predict stability and reactivity of coordination compounds,
- learn how to transfer concepts of coordination chemistry onto topics of materials sciences.
- Integrated acquirement of soft skills.

Remarks:

ELECTIVE COMPULSORY MODULE

Workload:

Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions:

Recommended: The lecture course is based on the courses "Chemistry I", "Chemistry II"

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]

Coordination Materials

Module PHM-0113: Advanced Solid State Materials

Advanced Solid State Materials

6 ECTS/LP

Version 1.0.0 (since WS10/11)
Person responsible for module: Prof. Dr. Henning Höppe

Contents:

- Repitition of concepts
- Novel silicate-analogous materials
- Luminescent materials
- Pigments
- Heterogeneous catalysis

Learning Outcomes / Competences:

- The students are aware of correlations between composition, structures and properties of functional materials,
- acquire skills to predict the properties of chemical compounds, based on their composition and structures,
- gain competence to evaluate the potential of functional materials for future technological developments, and
- will know how to measure the properties of these materials.
- Integrated acquirement of soft skills

Workload:
Total: 180 h
60 h lecture and exercise course (attendance)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)

Conditions:
Contents of the modules Chemie I, and Chemie II or Festkörperchemie
(Bachelor Physik, Bachelor Materialwissenschaften)

Examination

Novel Methods in Solid State NMR Spectroscopy
written exam / length of examination: 90 minutes

Module PHM-0167: Oxidation and Corrosion *Oxidation and Corrosion*	6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider	

Contents:

Introduction

Review of thermodynamics

Chemical equilibria

Electrochemistry

Electrode kinetics

High temperature oxidation

Localized corrosion

- Shallow pit corrosion
- Pitting corrosion
- Crevice corrosion
- Intercrystalline corrosion
- Stress corrosion cracking
- Fatigue corrosion
- Erosion corrosion
- Galvanic corrosion

Water and seawater corrosion

Corrosion monitoring

Corrosion properties of specific materials

Specific corrosion problems in certain branches

- Oil and Gas industry
- Automobile industry
- Food industry

Corrosion protection

- Passive layers
- Reaction layers (Diffusion layers …)
- Coatings (organic, inorganic)
- Cathodic, anodic protection
- Inhibitors

Learning Outcomes / Competences:

The students:

- know the the fundamental basics, mechanics, and types of corrosion processes,
- obtain specific knowledge of one type of corrosion.

Workload:

Total: 180 h

60 h lecture and exercise course (attendance)

120 h studying of course content using provided materials (self-study)

Conditions:	**Credit Requirements:**
Recommended: good knowledge in materials science, basic knowledge in physical chemistry	written exam (90 min)

Frequency: each winter semester	**Recommended Semester:** from 3.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Oxidation and Corrosion
Mode of Instruction: lecture
Language: English
Contact Hours: 4

Literature:

- Schütze: Corrosion and Environmental Degradation

Part of the Module: Oxidation and Corrosion (Tutorial)
Mode of Instruction: exercise course
Language: English
Contact Hours: 1

Examination

Oxidation and Corrosion
written exam / length of examination: 90 minutes

Examination Prerequisites:
Oxidation and Corrosion

Module PHM-0164: Characterization of Composite Materials *Characterization of Composite Materials*		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Markus Sause		
Contents: The following topics are presented: • Introduction to composite materials • Applications of composite materials • Mechanical testing • Thermophysical testing • Nondestructive testing		
Learning Outcomes / Competences: The students: • acquire knowledge in the field of materials testing and evaluation of composite materials. • are introduced to important concepts in measurement techniques, and material models applied to composites. • are able to independently acquire further information of the scientific topic using various forms of information.		
Workload: Total: 180 h 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Recommended: basic knowledge in materials science, particularly in composite materials		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Characterization of Composite Materials

Mode of Instruction: lecture

Language: English

Contact Hours: 3

Literature:

- Morgan: Carbon fibers and their composites
- Henning, Moeller: Handbuch Leichtbau
- Schürmann: Konstruieren mit Faser-Kunststoff-Verbunden
- Neitzel, Mitschang: Handbuch Verbundwerkstoffe
- Dowling: Mechanical behaviour of materials
- Issler: Festigkeitslehre - Grundlagen
- Landau, Lifschitz: Theoretische Physik Vol. 7

Further literature - actual scientific papers and reviews - will be announced at the beginning of the lecture.

Part of the Module: Characterization of Composite Materials (Tutorial)
Mode of Instruction: exercise course
Language: English
Contact Hours: 1

Literature:
see lecture

Examination
Characterization of Composite Materials
written exam / length of examination: 90 minutes
Examination Prerequisites:
Characterization of Composite Materials

Module PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties *Fiber Reinforced Composites: Processing and Materials Properties*	6 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Dr. Judith Moosburger-Will
Prof. Dr. Siegfried Horn

Contents:

The following topics are treated:

- production of fibers (e.g. glass, carbon, or ceramic fibers)
- Physical and chemical properties of fibers and their precursor materials
- Physical and chemical properties of commonly used polymeric and ceramic matrix materials
- Semi-finished products
- Composite production technologies
- Application of fiber reinforced materials

Learning Outcomes / Competences:

The students:

- know the application areas of composite materials.
- know the basics of production technologies of fibers, polymeric, and ceramic matrices and fiber reinforced materials.
- are introduced to physical and chemical properties of fibers, matrices, and fiber reinforced materials.
- are able to independently acquire further knowledge of the scientific topic using various forms of information.

Remarks:

ELECTIVE COMPULSORY MODULE

Workload:

Total: 180 h
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions: Recommended: basic knowledge in materials science, basic lectures in organic chemistry		
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Fiber Reinforced Composites: Processing and Materials Properties
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Literature:

- Morgan: Carbon fibers and their composites
- Ehrenstein: Polymeric materials
- Krenkel: Ceramic Matrix Composites
- Henning, Moeller: Handbuch Leichtbau
- Schürmann: Konstruieren mit Faser-Kunstoff-Verbunden
- Neitzel, Mitschang: Handbuch Verbundwerkstoffe

Further litrature - actual scientific papers and reviews - will be announced at the beginning of the lecture.

Examination

Fiber Reinforced Composites: Processing and Materials Properties

written exam / length of examination: 90 minutes

Examination Prerequisites:

Fiber Reinforced Composites: Processing and Materials Properties

Module PHM-0165: Introduction to Mechanical Engineering *Introduction to Mechanical Engineering*		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Siegfried Horn Dr. - Ing. Johannes Schilp		
Contents: The following topics are treated: • Statics and dynamics of objects • Transmissions and mechanisms • Tension, shear and bending moment • Hydrostatics • Hydrodynamics • Strength of materials and solid mechanics • Instrumentation and measurement • Mechanical design (including kinematics and dynamics)		
Learning Outcomes / Competences: The students understand and are able to apply basic concepts of physics and materials science to: • Engineering applications • Mechanical testing • Instrumentation • Mechanical design		
Workload: Total: 180 h		
Conditions: none		
Frequency: each summer semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination
Introduction to Mechanical Engineering
written exam / length of examination: 90 minutes
Examination Prerequisites:
Introduction to Mechanical Engineering

Module MRM-0052: Functional Polymers		6 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: PD Dr. Klaus Ruhland		
Contents: • Introduction to polymer science • Elastomers and elastoplastic materials • Memory-shape polymers • Piezoelectric polymers • Electrically conducting polymers • Ion-conducting polymers • Magnetic polymers • Photoresponsive polymers • Polymers with second order non-linear optical properties • Polymeric catalysts • Self-healing polymers • Polymers in bio sciences>		
Learning Outcomes / Competences: The students learn how polymeric materials can be designed and applied to act in a smart manner on an external mechanical, magnetic, electric, optical, thermal or chemical impact.		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Recommended: Attendance to PHM-0035 (Chemie I), PHM-0036 (Chemie II) and MRM-0050 (Grundlagen der Polymerchemie und -physik)		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Functional Polymers

written exam / length of examination: 90 minutes

Examination Prerequisites:

Functional Polymers

Module PHM-0168: Modern Metallic Materials

Modern Metallic Materials

6 ECTS/LP

Version 1.0.0 (since SoSe15)

Person responsible for module: Prof. Dr. Ferdinand Haider

Contents:

Introduction

Review of physical metallurgy

Steels:

- principles
- common alloying elements
- martensitic transformations
- dual phase steels
- TRIP and TWIP steels
- maraging steel
- electrical steel
- production and processing

Aluminium alloys:

- 2xxx
- 6xxx
- 7xxx
- Processing – creep forming, hydroforming, spinforming

Titanium alloys

Magnesium cast alloys

Superalloys

Intermetallics, high entropy alloys

Copper, brass, bronzes

Metallic glasses

Alloy design

Learning Outcomes / Competences:

Students

- learn about all kinds of actual metallic alloys, their properties and how these properties can be derived from basic concepts

Workload:

Total: 180 h

60 h lecture and exercise course (attendance)

20 h studying of course content using provided materials (self-study)

20 h studying of course content using literarture (self-study)

80 h studying of course content through exercises / case studies (self-study)

Conditions:

Recommended: Knowledge of physical metallurgy and physical chemistry

Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]

Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Modern Metallic Materials

written exam / length of examination: 90 minutes

Examination Prerequisites:

Modern Metallic Materials

Module PHM-0196: Surfaces and Interfaces II: Joining processes *Surfaces and Interfaces II: Joining processes*		6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: Dr. Judith Moosburger-Will Dozenten: Prof. Dr. Siegfried Horn, Dr. Judith Moosburger-Will		
Learning Outcomes / Competences: The students - know the application areas of composite materials - know the basics of cohesion and adhesion - know the basics of joining techniques - are introduced to physical and chemical properties metal-metal, metal-polymer and polymer-polymer interfaces - Are able to independently acquire further knowledge of the scientific topic using various forms of information.		
Workload: Total: 180 h		
Conditions: Basic knowledge on materials science, lecture “Surfaces and Interfaces I” Module Surfaces and Interfaces (PHM-0117) - recommended		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** any	

Parts of the Module

Part of the Module: Surfaces and Interfaces II: Joining processes

Mode of Instruction: lecture

Lecturers: Prof. Dr. Siegfried Horn

Language: German

Contact Hours: 3

Contents:

The following topics are treated:

- Introduction to adhesion
- Role of surface and interface properties
- Introduction to interactions at surfaces and interfaces
- Adhesion theories
- Surface and interface energy
- Surface treatment techniques
- Joining techniques
- Physical and chemical properties of joints
- Applications

Lehr-/Lernmethoden:

Lecture: Beamer presentation and Blackboard

Exercise: Exercises on recent topics, specialization of lecture contents

Literature:

Literature, including actual scientific papers and reviews, will be announced at the beginning of the lecture.

Examination

Surfaces and Interfaces II: Joining processes

written exam / length of examination: 90 minutes

Examination Prerequisites:

Surfaces and Interfaces II: Joining processes

Parts of the Module

Part of the Module: Übung zu Surfaces and Interfaces II: Joining processes

Mode of Instruction: exercise course

Language: German

Contact Hours: 1

Module PHM-0122: Non-Destructive Testing *Non-Destructive Testing*		6 ECTS/LP
Version 1.0.0 (since WS14/15) Person responsible for module: Prof. Dr. Markus Sause		
Contents: • Introduction to nondestructive testing methods • Visual inspection • Ultrasonic testing • Guided wave testing • Acoustic emission analysis • Thermography • Radiography • Eddy current testing • Specialized nondestructive methods		
Learning Outcomes / Competences: The students • acquire knowledge in the field of nondestructive evaluation of materials, • are introduced to important concepts in nondestructive measurement techniques, • are able to independently acquire further knowledge of the scientific topic using various forms of information. • Integrated acquirement of soft skills		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Basic knowledge on materials science, in particular composite materials		
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Non-Destructive Testing **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 3
Learning Outcome: see module description
Contents: see module description

Literature:

- Raj: Practical Non-destructive Testing
- Shull: Nondestructive Evaluation - Theory and Applications
- Krautkrämer: Ultrasonic testing of materials
- Grosse: Acoustic Emission Testing
- Rose: Ultrasonic waves in solid media
- Maldague: Nondestructive Evaluation of Materials by Infrared Thermography
- Herman: Fundamentals of Computerized Tomography

Further literature - actual scientific papers and reviews - will be announced at the beginning of the lecture.

Examination

Non-Destructive Testing

written exam / length of examination: 90 minutes

Examination Prerequisites:

Non-Destructive Testing

Module PHM-0203: Physics of Cells *Physics of Cells*			6 ECTS/LP
Version 1.1.0 (since WS16/17) Person responsible for module: Prof. Dr. Achim Wixforth Dr. Christoph Westerhausen			

Contents:

- Physical principles in Biology
- Cell components and their material properties: cell membrane, organelles, cytoskeleton
- Thermodynamics of proteins and biological membranes
- Physical methods and techniques for studying cells
- Cell adhesion – interplay of specific, universal and elastic forces
- Tensile strength and elasticity of tissue - macromolecules of the extra cellular matrix
- Micro mechanics and properties of the cell as a biomaterial
- Cell-cell-communication
- Cell migration
- Cell stimulation and cell-computer-communication

Learning Outcomes / Competences:

The students

- get to know a highly interdisciplinary field of physics.
- learn the basics on physical properties of human cells, as building blocks of living organisms and their material properties.
- learn about the impact of forces on the behavior of living cells
- learn physical description of fundamental biological processes and properties of biomaterials.
- are able to express biophysical questions and define model systems to answer these questions.

The students learn the following key qualifications:

- self-dependent working with English specialist literature.
- presentation techniques.
- documentation of experimental results.
- interdisciplinary thinking and working.

Workload:

60 h lecture and exercise course (attendance)
20 h studying of course content using provided materials (self-study)
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)

Conditions: Mechanics, Thermodynamics		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Physics of Cells
oral exam / length of examination: 30 minutes

Module PHM-0117: Surfaces and Interfaces *Surfaces and Interfaces*		6 ECTS/LP
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Manfred Albrecht		
Contents: Introduction • The importance of surfaces and interfaces Some basic facts from solid state physics • Crystal lattice and reciprocal lattice • Electronic structure of solids • Lattice dynamics Physics at surfaces and interfaces • Structure of ideal and real surfaces • Relaxation and reconstruction • Transport (diffusion, electronic) on interfaces • Thermodynamics of interfaces • Electronic structure of surfaces • Chemical reactions on solid state surfaces (catalysis) • Interface dominated materials (nano scale materials) Methods to study chemical composition and electronic structure, application examples • Scanning electron microscopy • Scanning tunneling and scanning force microscopy • Auger – electron – spectroscopy • Photo electron spectroscopy		
Learning Outcomes / Competences: The students: • have knowledge of the structure, the electronical properties, the thermodynamics, and the chemical reactions on surfaces and interfaces, • acquire the skill to solve problems of fundamental research and applied sciences in the field of surface and interface physics, • have the competence to solve certain problems autonomously based on the thought physical basics. • Integrated acquirement of soft skills.		
Workload: Total: 180 h 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: The module "Physics IV - Solid State Physics" of the Bachelor of Physics / Materials Science program should be completed first.		
Frequency: each winter semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Surfaces and Interfaces

written exam / length of examination: 90 minutes

Examination Prerequisites:

Surfaces and Interfaces

Module PHM-0053: Chemical Physics I *Chemical Physics I*	6 ECTS/LP

Version 1.0.0 (since WS09/10)
Person responsible for module: Prof. Dr. Wolfgang Scherer

Contents:

- Basics of quantum chemical methods
- Molecular symmetry and group theory
- The electronical structure of transition metal complexes

Learning Outcomes / Competences:

The students:

- know the basics of the extended-Hückel-method and the density functional theory,
- know the basics of group theory,
- are able to apply the knowledge gained through consideration of symmetry from vibration-, NMR-, and UV/VIS-spectroscopy, and
- are able to interpret and predict the basical geometric, electronical and magnetical properties of transition metal complexes.
- Integrated acquirement of soft skills: ability to specialize in a scientific topic and to apply the acquired knowledge for solving scientific problems.

Remarks:

It is possible for students to do EHM calculations autonomously and analyze electronical structures of molecules on a computer cluster within the scope of the tutorial.

Workload:

Total: 180 h
20 h studying of course content using literarture (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using provided materials (self-study)
60 h lecture and exercise course (attendance)

Conditions:

It is recommended to complete the experiments FP11 (IR-spectroscopy) and FP17 (Raman-spectroscopy) of the module "Physikalisches Fortgeschrittenenpraktikum".

Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Chemical Physics I
Mode of Instruction: lecture
Language: English
Contact Hours: 3

Learning Outcome:

see module description

Contents:

- Basics of quantum chemical methods
  - Extended Hueckel method (EHM)
  - Modern quantum chemical methods of chemical physics
  - Application: exemplary calculations and interpretation of simple electronical structures
- Molecular symmetry and group theory
  - Symmetry operations and matrix transformations
  - Point groups
  - Reducible and irreducible representations
  - Character tables
  - Application: infrared- and raman-spectroscopy, NMR-spectroscopy
- The electronical structure of transition metal complexes
  - Ligand field theory and angular-overlap model (AOM)
  - The physical basics of the spectrochemical series
  - Molecular orbital theory of transition metal complexes
  - Application: UV/VIS-spectroscopy, molecular magnetism

Examination
Chemical Physics I
written exam / length of examination: 90 minutes
Examination Prerequisites:
Chemical Physics I

Module PHM-0217: Advanced X-ray and Neutron Diffraction Techniques *Advanced X-ray and Neutron Diffraction Techniques*		6 ECTS/LP
Version 1.0.0 (since SoSe17) Person responsible for module: Prof. Dr. Wolfgang Scherer PD Dr. Georg Eickerling		
Contents: Subjects of the lecture are advanced X-ray and neutron diffraction techniques: • The failure of the standard *I*ndependent *A*tom *M*odel (IAM) in X-ray diffraction • Beyond the standard model: The multipolar model • How to obtain and analyze experimental charge densities • How to derive chemical and physical properties from diffraction data • Applications of joined X-ray and neutron diffraction experiments		
Learning Outcomes / Competences: The students: • gain basic theoretical knowledge on the reconstruction of accurate electron density maps from X-ray and neutron diffraction data • know the basics of the *Quantum Theory of Atoms in Molecules* • are competent to analyze the topology of the electron density and correlate it with the physical and chemical properties of materials		
Remarks: **ELECTIVE COMPULSORY MODULE**		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 60 h lecture and exercise course (attendance)		
Conditions: It is recommended to complete the Module PHM-0053 Chemical Physics I.		
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

written exam / length of examination: 90 minutes

Examination Prerequisites:

Advanced X-ray and Neutron Diffraction Techniques

Module PHM-0146: Method Course: Electronics for Physicists and Materials Scientists *Method Course: Electronics for Physicists and Materials Scientists*	8 ECTS/LP

Version 1.2.0 (since SoSe15 to WS21/22)
Person responsible for module: Andreas Hörner

Contents:

1. Basics in electronic and electrical engineering [4]
2. Quadrupole theory [2]
3. Analog technique, transistor and opamp circuits [5]
4. Boolean algebra and logic [4]
5. Digital electronics and calculation circuits [6]
6. Microprocessors and Networks [4]
7. Basics in Electronic [8]
8. Implementation of transistors [8]
9. Operational amplifiers [8]
10. Digital electronics [8]
11. Practical circuit arrangement [8]

Learning Outcomes / Competences:
The students:

- know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the laboratory,
- have skills in easy circuit design, measuring and control technology, analog and digital electronics,
- have expertise in independent working on circuit problems. They can calculate and develop easy circuits.

Remarks:

Examination

Method Course: Electronics for Physicists and Materials Scientists

oral exam / length of examination: 30 minutes

Description:

Ausnahmefall SoSe 2020: schriftliche Prüfung

Module PHM-0148: Method Course: Optical Properties of Solids *Method Course: Optical Properties of Solids*	8 ECTS/LP

Version 1.2.0 (since SoSe15)
Person responsible for module: Prof. Dr. Joachim Deisenhofer

Contents:

Electrodynamics of solids

- Maxwell equations
- Electromagnetic waves
- Refraction and interference, Fresnel equations

FTIR spectroscopy

- Fourier transformation
- Michelson-Morley and Genzel interferometer
- Sources and detectors

Terahertz Time Domain spectroscopy

- Generation of pulsed THz radiation
- Gated detection, Austin switches

Elementary excitations in solid materials

- Rotational-vibrational bands
- Infrared-active phonons
- Interband excitations
- Crystal-field excitations

Learning Outcomes / Competences:

The students:

- get to know the basic principles of far-infrared spectroscop and terahertz time-domain-spectroscopy,
- learn about fundamental physical excitations in condensed matter that can be studied by these methods,
- learn to plan and carry out complex experiments,
- learn how to evaluate and analyze optical data.

Remarks:

Workload:

Total: 240 h
30 h studying of course content using provided materials (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)
90 h lecture and exercise course (attendance)

Conditions: Recommended: basic knowledge in solid-state physics, basic knowledge in electrodynamics and optics		**Credit Requirements:** written report
Frequency: each semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]

Method Course: Optical Properties of Solids (lecture)

**(online/digital) **

Part of the Module: Method Course: Optical Properties of Solids (Practical Course)

Mode of Instruction: laboratory course

Language: English

Contact Hours: 4

Assigned Courses:

Method Course: Optical Properties of Solids (Practical) (internship)

**(online/digital) **

Examination

Method Course: Optical Properties of Solids

report

Examination Prerequisites:

Method Course: Optical Properties of Solids

Module PHM-0151: Method Course: Porous Materials - Synthesis and Characterization *Method Course: Porous Materials - Synthesis and Characterization*		8 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
Contents: Synthesis of porous functional materials (e.g. aerogels, mesoporous silica materials, zeolites, Metal-Organic Frameworks) Characterization methods • Structure and composition (XRD, UV/VIS, IR, ESEM, EDX) • Thermal analysis (TGA) • Adsorption and diffusion (BET, pore size distribution, pulse chemisorption) • Catalytic properties (GC/MS, TPO, TPR)		
Learning Outcomes / Competences: The students will learn how to • use modern solid state preparation techniques (e.g. hydrothermal, solvothermal, microwave synthesis), • employ analytical methods dedicated to porous materials.		
Remarks: **ELECTIVE COMPULSORY MODULE**		
Workload: Total: 240 h 120 h internship / practical course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study)		
Conditions: Recommended: lecture Functional Porous Materials		**Credit Requirements:** written report (editing time 3 weeks) + written exam Please note that final grade of the Method Course consists of the maximum point score of of the exam and the grade of the report of the practical part which are weighted (40:60).
Frequency: each winter semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Method Course: Porous Materials Synthesis and Characterization (Practical Course) **Mode of Instruction:** laboratory course **Language:** English **Contact Hours:** 4

Examination

Method Course: Porous Materials Synthesis and Characterization

written exam / length of examination: 45 minutes

Examination Prerequisites:

Method Course: Porous Materials Synthesis and Characterization

Module PHM-0147: Method Course: Electron Microscopy *Method Course: Electron Microscopy*			8 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider			
Contents: 1. Scanning electron microscopy (SEM) 2. Transmission electron microscopy (TEM)			
Learning Outcomes / Competences: The students: • get introduced to the basics of scanning electron microscopy and transmission electron microscopy, using lectures to teach the theoretical basics, which are afterwards deepened using practical courses, • are able to characterize materials using different electron microscopy techniques and to decide, if the technique is feasible for a certain problem.			
Remarks: **ELECTIVE COMPULSORY MODULE**			
Workload: Total: 240 h 90 h lecture and exercise course (attendance) 150 h studying of course content using provided materials (self-study)			
Conditions: Recommended: knowledge of solid-state physics, reciprocal lattice			**Credit Requirements:** regular participation, oral presentation (10 min), written report (one report per group)
Frequency: each summer semester	**Recommended Semester:** from 2.		**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program		

Parts of the Module
Part of the Module: Method Course: Electron Microscopy **Mode of Instruction:** lecture **Language:** English **Contact Hours:** 2

Contents:

SEM:

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

TEM:

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM

Mode of Instruction: laboratory course

Language: English

Contact Hours: 4

Examination

Method Course: Electron Microscopy

report

Examination Prerequisites:

Method Course: Electron Microscopy

Module PHM-0149: Method Course: Methods in Biophysics *Method Course: Methods in Biophysics*		8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Dr. Stefan Thalhammer

Contents:

Unit radiation biophysics

- Concepts in radiation protection
- Low-dose irradiation biophysics
- DNA repair dynamics of living cells after ionizing radiation
- Confocal scanning laser microscopy

Unit microfluidic

- Microfluidic systems
- Accoustic driven microfluidics
- Calculation of microfluidic problems

Unit analysis

Learning Outcomes / Competences:

The students:

- know basic terms, concepts and phenomena in radiation biophysics,
- acquire basic knowledge of fluidic and biophysical phenomena on small length scales and applications and technologies of microfluidic analytical systems,
- learn skills in tissue culture and immun-histochemical staining procedures,
- learn skills in fluorescence and confocal scanning microscopy,
- learn skills to calculate fluidic problems on small length scales,
- learn skills to handle microfluidic channel systems.

Remarks:

ELECTIVE COMPULSORY MODULE

The course will partly take place at the Helmholtz Center Munich.

Workload:

Total: 240 h

Conditions: Attendance of the lecture "Biophysics and Biomaterials"		**Credit Requirements:** 1 written lab report
Frequency: each summer semester	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Method Course: Methods in Biophysics

report

Examination Prerequisites:

Method Course: Methods in Biophysics

Module PHM-0153: Method Course: Magnetic and Superconducting Materials *Method Course: Magnetic and Superconducting Materials*		8 ECTS/LP
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Philipp Gegenwart		

Contents:

Methods of growth and characterization:

Sample preparation (bulk materials and thin films), e.g.,

- arcmelting
- flux-growth
- sputtering and evaporation

Sample characterization, e.g.,

- X-ray diffraction
- electron microscopy, scanning tunneling microscopy
- magnetic susceptibility, electrical resistivity
- specific heat

Learning Outcomes / Competences:

The students

- get to know the basic methods of materials growth and characterization, such as poly- and single crystal growth, thin-film growth, X-ray diffraction, magnetic susceptibility, dc-conductivity, and specific heat measurements
- are trained in planning and performing complex experiments
- learn to evaluate and analyze the collected data, are taught to work on problems in experimental solid state physics, including analysis of measurement results and their interpretation in the framework of models and theories

Workload:

Total: 240 h
90 h lecture and exercise course (attendance)
30 h studying of course content using provided materials (self-study)
90 h studying of course content through exercises / case studies (self-study)
30 h studying of course content using literarture (self-study)

Conditions: Recommended: basic knowledge in solid state physics and quantum mechanics		**Credit Requirements:** presentation and written report on the experiments (editing time 3 weeks, max. 30 pages)
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Method Course: Magnetic and Superconducting Materials
report
Examination Prerequisites:
Method Course: Magnetic and Superconducting Materials

Module PHM-0154: Method Course: Modern Solid State NMR Spectroscopy *Method Course: Modern Solid State NMR Spectroscopy*		8 ECTS/LP
Version 2.0.0 (since SoSe17) Person responsible for module: Prof. Dr. Leo van Wüllen		
Contents: Physical foundations of NMR spectroscopy Internal interactions in NMR spectroscopy • Chemical shift interaction • Dipole interaction and • Quadrupolar interaction Magic Angle Spinning techniques Modern applications of NMR in materials science Experimental work at the Solid-State NMR spectrometers, computer-aided analysis and interpretation of acquired data		
Learning Outcomes / Competences: The students: • gain basic knowledge of the physical foundations of modern Solid-State NMR spectroscopy, • gain basic practical knowledge of operating a solid-state NMR spectrometer, • can -- under guidance -- plan, perform, and analyze modern solid-state NMR experiments for the structural characterization of advanced materials.		
Remarks: **ELECTIVE COMPULSORY MODULE**		
Workload: Total: 240 h 30 h studying of course content using literarture (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using provided materials (self-study) 90 h lecture and exercise course (attendance)		
Conditions: The attendance of the lecture "NOVEL METHODS IN SOLID STATE NMR SPECTROSCOPY" is highly recommended.		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Method Course: Modern Solid State NMR Spectroscopy

report / work period for assignment: 2 weeks

Examination Prerequisites:

Method Course: Modern Solid State NMR Spectroscopy

Module PHM-0171: Method Course: Coordination Materials *Method Course: Coordination Materials*		8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Dirk Volkmer
Dr. Hana Bunzen

Contents:

1. Synthesis of metal complexes:
2. Analytical characterization of metal complexes (thermal analysis, UV/vis spectroscopy, IR spectroscopy, X-ray diffraction)
3. Material composition and stability studies
4. Functional coordination materials (spin-crossover materials, oxygen-carrying materials)

Learning Outcomes / Competences:
The students will learn how to:

- prepare transition metal complexes employing modern preparation techniques (e.g. microwave synthesis), inert synthesis conditions (Schlenk technique),
- characterize coordination compounds by selected analytical techniques,
- develop functional coordination materials based on organic / inorganic hybrid compounds,
- employ X-ray diffraction methods for structural analysis.

Remarks:
ELECTIVE COMPULSORY MODULE

Workload:
Total: 240 h
20 h studying of course content using provided materials (self-study)
80 h studying of course content through exercises / case studies (self-study)
20 h studying of course content using literarture (self-study)
120 h lecture and exercise course (attendance)

Conditions: none		**Credit Requirements:** written report (protocols)

Method Course: Coordination Materials (Seminar)

Module PHM-0172: Method Course: Functional Silicate-analogous Materials *Method Course: Functional Silicate-analogous Materials*	8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: Prof. Dr. Henning Höppe

Contents:

Synthesis and characterization of functional materials according to the topics:

1. Silicate-analogous compounds
2. Luminescent materials / phosphors
3. Pigments
4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis

Learning Outcomes / Competences:

The students will know how to:

- develop functional materials based on silicate-analogous materials,
- apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),
- work under non-ambient atmospheres (e.g. reducing, inert conditions),
- solve and refine crystal structures from single-crystal data,
- describe and classify these structures properly.

Remarks:

Module PHM-0206: Method Course: Infrared Microspectroscopy under Pressure *Method Course: Infrared Microspectroscopy under Pressure*		8 ECTS/LP
Version 1.0.0 (since WS16/17) Person responsible for module: Prof. Dr. Christine Kuntscher		
Contents: Electrodynamics of solids Maxwell equations and electromagnetic waves in matter Optical variables Theories for dielectric function: i. Free carriers in metals and semiconductors (Drude) ii. Interband absorptions in semiconductors and insulators iii. Vibrational absorptions iv. Multilayer systems FTIR microspectroscopy Components of FTIR spectrometers i. Light sources ii. Interferometers iii. Detectors Microscope components High pressure experiments Equipments Pressure calibration Experimental techniques under high pressure i. IR spectroscopy ii. Raman scattering iii. Magnetic measurements iv. Transport measurements		
Learning Outcomes / Competences: The students Learn about the basics of the light interaction with various materials and the fundamentals of FTIR microspectroscopy, Are introduced to the high pressure equipments used in infrared spectroscopy, Learn to carry out infrared microspectroscopy experiments under pressure, Learn to analyze the measured optical spectra.		
Workload: Total: 240 h		
Conditions: none		**Credit Requirements:** Written report

Version 1.0.0 (since WS15/16)
Person responsible for module: Prof. Dr. Wolfgang Scherer
PD Dr. Georg Eickerling

Contents:
Subjects of the practical training and the accompanying lecture are the theoretical basics and the practical application of X-ray diffraction techniques:

Data collection and reduction techniques

Symmetry and space group determination

Structural refinements:
• The Rietveld method
• Difference Fourier synthesis

Structure determination:
• Patterson method
• Direct methods

Interpretation of structural refinement results

Errors and Pitfalls: twinning and disorder

Learning Outcomes / Competences:
The students:

- gain basic practical knowledge on structural characterization methods for single- and poly-crystalline samples employing X-ray diffraction techniques,
- have the skill to perform under guidance phase-analyses and X-ray structure determinations
- are competent to analyze hands-on the structure-property relationships of new materials

Remarks:

Module PHM-0193: Plasma Material Interaction *Plasma-Material-Wechselwirkung*		6 ECTS/LP
Version 2.0.0 (since WS17/18) Person responsible for module: apl. Prof. Dr.-Ing. Ursel Fantz Dr. Marco Wischmeier		
Contents: • Fundamentals of plasma material interactions (winter term) • High heat load components in nuclear fusion devices (summer term)		
Learning Outcomes / Competences: • Knowledge: The students know the fundamental plasma material interaction processes and their implication for nuclear fusion research in light of the technological boundary conditions and challenges. • Skills: The students are proficient in a differentiated analysis of complex systems, based on learning from examples of power exhaust in fusion devices. • Competencies: The students are competent in elaborating current topics of plasma material interaction. • Integrated achievement of key qualifications: Acquirement of interdisciplinary knowledge, independent work with English literature, abstraction and approximation of complex processes using numerical models, application-oriented thinking and ability to contemplate about experimental results.		
Remarks: The two lectures of this module can be followed in an arbitrary order. Thus, the module can be started at a summer or winter term.		
Workload: Total: 180 h 60 h studying of course content using provided materials (self-study) 60 h studying of course content using literarture (self-study) 60 h lecture (attendance)		
Conditions: recommended: module "Plasmaphysik und Fusionsforschung"		**Credit Requirements:** general examination for entire module
Frequency: annually	**Recommended Semester:** from 2.	**Minimal Duration of the Module:** 2 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Fundamentals of plasma material interactions **Mode of Instruction:** lecture **Language:** English **Frequency:** each winter semester **Contact Hours:** 2
Learning Outcome: see description of module
Contents: Fundamental plasma boundary physics, erosion processes: physical sputtering, chemical erosion, radiation induced sublimation, arcs, experimental observation of surface processes in plasmas, methods for characterizing surfaces, coating techniques, hydrogen retention, surface modification by plasmas.

Literature:

Examination

Plasma Material Interaction

oral exam / length of examination: 30 minutes

Module PHM-0234: 2D Materials *2D Materials*		6 ECTS/LP
Version 1.0.1 (since SoSe18) Person responsible for module: Prof. Dr. Hubert J. Krenner		
Contents: Two-dimensional materials: graphene to emerging new materials, such as transition metal dichalcogenides 1. Fabrication 2. Optical, electronic and vibrational properties 3. Applications in advanced functional devices		
Learning Outcomes / Competences: 1. Specify different classes of 2D solid state materials and their properties. 2. Describe and explain preparation and nanofabrication methods for 2D materials. 3. Understand and explain and differentiate between suitable optical and structural characterization methods for 2D materials. 4. Understand and explain phonon properties of 2D materials. 5. Understand and explain magneto quantum transport phenomena such as the quantum Hall effect in graphene 6. Understand and explain absorption, excitonic and spin properties of transition metal dichalcogenides.. 7. Understand and explain and discuss applications of 2D materials and their heterostructures for electronic, optoelectronic, spintronics devices and solar energy converstion.		
Workload: Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 60 h lecture (attendance) 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study)		
Conditions: recommended prerequisites: basic knowledge in solid-state physics and quantum mechanics.		
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Person responsible for module: Prof. Dr. Liviu Chioncel

Contents:
This module covers Monte-Carlo methods (computational algorithms) for classical and quantum problems. Python as programing language will be employed. The following common applications will be discussed:

- Monte-Carlo integration, stochastic optimization, inverse problems
- Feynman path integrals: the connection between classical and quantum systems
- Oder and disorder in spin systems, fermions, and boson

Learning Outcomes / Competences:
- The students are capable of obtaining numerical solutions to problems too complicated to be solved analytically
- The students are able to present (graphically), discuss and analyze the results
- The students gain experience in formulatind and carrying out a collaborative project

Remarks:
The number of students will be limited to 8.

Workload:
Total: 240 h
90 h preparation of presentations (self-study)
60 h preparation of written term papers (self-study)
60 h studying of course content (self-study)
90 h (attendance)

Conditions: Knowledge of the programming language Phython is expected on the level taught in the modul PHM-0041. Requirements to understand basic concepts in physics: Classical Mechanics (Newton, Lagrange), Electrodynamics, Thermodynamics and Quantum Mechanics.		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Theoretical Concepts and Simulation
Mode of Instruction: lecture
Language: English / German
Contact Hours: 2

Contents:

Concepts of classical and quantum statistical physics:

- the meaning of sampling, random variables, ergodicity
- equidistribution, pressure, temperature
- path integrals, quantum statistics, enumeration, cluster algorithms

Literature:

1. Werner Krauth, Algorithms and Computations (Oxford University Press, 2006)
2. R. H. Landau, A Survey of Computational Physics (Princeton Univ. Press, 2010)

Part of the Module: Method Course: Theoretical Concepts and Simulation (Practical Course)

Mode of Instruction: internship

Language: English / German

Contact Hours: 4

Contents:

see above

Literature:

see above

Examination

Method Course: Theoretical Concepts and Simulation

report / work period for assignment: 4 weeks

Description:

The requirement for the credit points is based on a programming project carried out in a team of 2-3 students. The final report contains the formulation and a theoretical introduction into the problem, the numerical implementation, and the presentation of the results.

Module PHM-0225: Analog Electronics for Physicists and Materials Scientists *Analog Electronics for Physicists and Materials Scientists*		6 ECTS/LP
Version 1.1.0 (since WS15/16) Person responsible for module: Andreas Hörner		
Contents: 1. Basics in electronic and electrical engineering 2. Quadrupole theory 3. Electronic Networks 4. Semiconductor Devices 5. Implementation of transistors 6. Operational amplifiers 7. Optoelectronic Devices 8. Measurement Devices		
Learning Outcomes / Competences: The students: • know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the Lab, • have skills in easy circuit design, measuring and control technology, analog electronics, • have expertise in independent working on circuit problems. They can calculate and develop easy circuits.		
Workload: Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: none		
Frequency: each winter semester	**Recommended Semester:**	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Examination

Analog Electronics Analog Electronics for Physicists and Materials Scientists

oral exam / length of examination: 30 minutes

Examination Prerequisites:

Analog Electronics for Physicists and Materials Scientists

Description:

Ausnahmefall Wintersemester 2021/22: Klausur (90 Minuten)

Module PHM-0226: Digital Electronics for Physicists and Materials Scientists *Digital Electronics for Physicists and Materials Scientists*		6 ECTS/LP
Version 1.2.0 (since WS15/16) Person responsible for module: Andreas Hörner		
Contents: 1. Boolean algebra and logic gates 2. Digital electronics and calculation of digital circuits 3. Converters (Analog – Digital, Digital – Analog) 4. Principle of digital memory and communication, 5. Microprocessors and Networks		
Learning Outcomes / Competences: The students: • know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the Lab, • have skills in easy circuit design, measuring and control technology and digital electronics, • have expertise in independent working on circuit problems. They develop easy digital circuits and program microprocessors		
Workload: Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literarture (self-study) 60 h lecture and exercise course (attendance)

Examination

Digital Electronics Digital Electronics for Physicists and Materials Scientists

oral exam / length of examination: 30 minutes

Description:

Ausnahmefall SoSe 2021: schriftliche Prüfung, Klausur mit 90 Minuten Dauer

Module PHM-0228: Symmetry concepts and their applications in solid state physics and materials science *Symmetry concepts and their applications in solid state physics and materials science*	6 ECTS/LP
Version 1.0.0 (since WS18/19) Person responsible for module: Prof. Dr. István Kézsmárki Deisenhofer, Joachim, Dr.	

Contents:

The topical outline of the course is as follows:

- Introduction and common examples
  - Motivating examples
  - Polar and axial vectors and tensors
  - Spatial and temporal symmetries and charge conjugation
  - Symmetries of measurable quantities and fields
  - Symmetries of physical laws (classical and quantum)
  - Conservation laws (linear and angular momentum, energy, etc.)
  - Symmetry of measurement configurations (reciprocity, etc.)
- Neumann principle
  - Linear response theory and Onsager relations
  - Applications to vector and tensor quantities: electric and magnetic dipole moment of molecules; ferroelectricity, ferromagnetism, piezoelectricity and magnetoelectricity in crystals; wave propagation in anisotropic media (sound and light)
- Symmetry allowed energy terms
  - On the level of classical free energy: Polar, nematic and magnetic order parameters (Landau expansion)
  - On the level of Hamiltonians: Molecular vibrations, crystal field potential, magnetic interactions
- Symmetry of physical states
  - Spatial inversion and parity eigenstates
  - Discrete translations and the Bloch states
- Spontaneous symmetry breaking upon phase transitions (Landau theory)
- Outlook: Symmetry guides for skyrmion-host materials, multiferroic compounds and axion insulators

Learning Outcomes / Competences:

The course aims at providing insights into the simple use of symmetry concepts to understand phenomena and material properties without performing detailed calculations. On the same basis, it gives some guides how to make minimal plans for experiments using the symmetry of the studied materials or vice versa how to determine the symmetry of materials from the output of experiments.

Workload:

Total: 180 h
60 h (attendance)
60 h exam preparation (self-study)
60 h studying of course content (self-study)

Conditions:

Background in basic quantum mechanics is required.

Frequency: nach Bedarf WS und SoSe	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module PHM-0223: Method Course: Tools for Scientific Computing *Method Course: Tools for Scientific Computing*	8 ECTS/LP

Version 1.1.0 (since SoSe18)
Person responsible for module: Prof. Dr. Gert-Ludwig Ingold

Contents:
Important tools for scientific computing are taught in this module and applied to specific scientific problems by the students. As far as tools depend on a particular programming language, Python will be employed. Tools to be discussed include:

- numerical libraries like NumPy and SciPy
- visualisation of numerical results
- use of a version control system like git and its application in collaborative work
- testing of code
- profiling
- documentation of programs

Learning Outcomes / Competences:
- The students are capable of solving a physical problem of some complexity by means of numerical techniques. They are able to visualize the results and to adequately document their program code.
- The students know examples of numerical libraries and are able to apply them to solve scientific problems.
- The students know methods for quality assurance like the use of unit tests. They know techniques to identify run-time problems.
- The students know a distributed version control system and are able to use it in a practical problem.
- The students have gained practical experience in a collaborative project work. They are able to plan and carry out a programming project in a small group.

Remarks:
The number of students will be limited to 12.

Workload:
Total: 240 h
60 h studying of course content (self-study)
90 h (attendance)
30 h preparation of presentations (self-study)
60 h preparation of written term papers (self-study)

Conditions: Knowledge of the programming language Python is expected on the level taught in the module PHM-0041 „Einführung in das Programmieren für Physiker und Materialwissenschaftler“.		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: irregular	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Method Course: Tools for Scientific Computing
Mode of Instruction: lecture
Language: English / German
Contact Hours: 2

Learning Outcome:

- The students know the numerical libraries NumPy and SciPy and selected tools for the visualization of numerical results.
- The students know fundamental techniques for the quality assurance of programs like the use of unit tests, profiling and the use of the version control system git. They are able to adequately document their code.

Contents:

- numerical libraries NumPy and SciPy
- graphics with matplotlib
- version control system Git and workflow for Gitlab/Github
- unit tests
- profiling
- documentation using docstrings and Sphinx

Literature:

- A. Scopatz, K. D. Huff, *Effective Computation in Physics* (O'Reilly, 2015)

Part of the Module: Method Course: Tools for Scientific Computing (Practical Course)

Mode of Instruction: internship

Language: English / German

Contact Hours: 4

Learning Outcome:

- The students are capable of solving a physical problem of some complexity by means of numerical techniques and to visualize the results.
- They have gained some experience in the application of methods for quality assurance of their code and are able to appropriately document their programs.
- The students are able to work in a team and know how to make use of tools like Gitlab/Github.
- The students are able to present the status of their work, to critically assess it and to accept suggestions from others.

Contents:

The tools discussed in the lecture will be applied to specific scientific problems by small teams of 2-3 students under supervision. The teams regularly inform the other teams in oral presentations on their progress, the tools employed as well as encountered problems and their solution.

Examination

Method Course: Tools for Scientific Computing

report / work period for assignment: 4 weeks

Description:

The requirement for credit points is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Module PHM-0150: Method Course: Spectroscopy on Condensed Matter *Method Course: Spectroscopy on Condensed Matter*	8 ECTS/LP

Version 1.0.0 (since SoSe15)
Person responsible for module: PD Dr. Stephan Krohns

Contents:

Dielectric Spectroscopy [8]

- Methods
- Cryo-techniques
- Measurement quantities
- Relaxation processes
- Dielectric phenomena

Ferroelectric Materials [7]

- Mechanism of ferroelectric polarization
- Hysteresis loop measurements
- Dielectric spectroscopy

Glassy Matter [8]

- Introduction
- Glassy phenomena
- Dielectric spectroscopy

Multiferroic Materials [7]

- Introduction
- Microscopic origins of multiferroicity
- Pyrocurrent measurements
- Dielectric spectroscopy

Learning Outcomes / Competences:

The students:

- learn about the basic concepts of dielectric spectroscopy and the phenomena examined with it. Therefore they are instructed in experimental methods for the investigation of the dielectric properties of condensed matter,
- are trained in planning and performing complex experiments. They learn to evaluate and analyze the collected data,
- are taught to work on problems in experimental solid state physics, including analysis of measurement results and their interpretation in the framework of models and theories.

Remarks:

ELECTIVE COMPULSORY MODULE

Workload:

Total: 240 h

Conditions: Recommended: basic knowledge in solid state physics, basic knowledge in physics of glasses and supercooled liquids		**Credit Requirements:** written report on the experiments (editing time 2 weeks)
Frequency: irregular (usu. winter semester)	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 6	**Repeat Exams Permitted:** according to the examination regulations of the study program

Module MRM-0128: Bioinspired Composites *Bioinspired Composites*		6 ECTS/LP
Version 2.0.0 (since WS20/21) Person responsible for module: Prof. Dr.-Ing. Dietmar Koch		
Learning Outcomes / Competences: The students will understand the following topics: • Bionic principles • Bionically motivated development of technical components • Topology optimization • Bioinspired composites • Manufacturing, properties and application of natural fiber based composites		
Workload: Total: 180 h		
Conditions: Basic knowledge of composite materials		**Credit Requirements:** Bestehen der Modulprüfung
Frequency: each summer semester	**Recommended Semester:** from 1.	**Minimal Duration of the Module:** 1 semester[s]
Contact Hours: 4	**Repeat Exams Permitted:** according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Vorlesung Bioinspired Composites **Mode of Instruction:** lecture **Lecturers:** Prof. Dr.-Ing. Dietmar Koch **Language:** English / German **Contact Hours:** 3
Contents: The lecture teaches the basic knowledge of bionic principles. The fundamental approaches to develop technical components based on bioinspired ideas will be presented. Topology optimization will be discussed which is a versatile tool in order to improve composite design and composite properties based on bionic knowledge. Furthermore material development of bioinspired ceramic and polymer based components as well as natural based materials will be highlighted. Finally the manufacturing of natural fiber based composites will be taught and the resulting properties and application will be discussed.

Module MRM-0112: Finite element modeling of multiphysics phenomena *Finite-Elemente-Modellierung von Multiphysik-Phänomenen*		6 ECTS/LP
Version 2.1.0 (since WS19/20) Person responsible for module: Prof. Dr. Markus Sause Dozenten: Prof. Dr. Sause / Prof. Dr Peter		

Learning Outcomes / Competences:

Die Studierenden

- Lernen existierende numerische Verfahren zur Modellierung und Simulation von physikalischen Prozessen und Systemen kennen
- Erlernen Fertigkeiten zur Anwendung von numerischen Verfahren für realitätsnahe Problemstellungen
- Erlernen grundlegende Funktionsprinzipien eines FEM Programmes durch Anwendung von „COMSOL Multiphysics“

Remarks:

Dieses Modul wird von Dozenten des MRM, der Physik und der Mathematik angeboten. Es ist vorgesehen für Physik- und WING-Studierende, die einen Einblick in ein modernes FEM-Programm bekommen möchten, wie es in akademischen und industriellen Anwendungen eingesetzt wird. Belegung des Moduls ist nur möglich, wenn das Modul "MRM-0107" noch nicht erfolgreich abgeschlossen wurde.

Workload:

Total: 180 h

Conditions: Empfohlen: MTH-6110 - Numerische Verfahren für Materialwissenschaftler und Physiker		**Credit Requirements:** Bestehen der Modulprüfung

Parts of the Module

Part of the Module: Finite-Elemente-Modellierung von Multiphysik-Phänomenen

Mode of Instruction: lecture

Lecturers: Prof. Dr. Malte Peter, Prof. Dr. Markus Sause

Language: German

Contact Hours: 2

Contents:

Die folgenden Inhalte werden vorgestellt:

- Modellierung und Simulation von physikalischen Prozessen und Systemen
- Grundlegende Konzepte von FEM Programmen
- Erzeugung von Rechennetzen
- Optimierungsstrategien
- Auswahl von Lösungsalgorithmen
- Beispielanwendungen aus der Elektrodynamik
- Beispielanwendungen aus der Thermodynamik
- Beispielanwendungen aus der Kontinuumsmechanik
- Beispielanwendungen aus der Fluiddynamik
- Kopplung von Differentialgleichung zur Lösung von Multiphysik-Phänomenen

Module MRM-0136: Mechanical Characterization of Materials

6 ECTS/LP

Mechanical Characterization of Materials

Version 1.0.0 (since SoSe21)

Person responsible for module: Prof. Dr. Markus Sause

Contents:

The following topics are presented:

- Introduction to material characterization
- Linear material behaviour
- Non-linear material behaviour
- Material failure
- Tensile testing
- Compression testing
- Shear testing
- Other static testing concepts
- Fracture mechanics
- Damage tolerance
- Microstructural properties
- Micromechanics
- Creep testing
- Fatigue testing
- High-Velocity testing

Learning Outcomes / Competences:

The students:

- Acquire knowledge in the field of materials testing and evaluation of materials.
- Are introduced to important concepts in measurement techniques, and material models.
- Are able to independently acquire further knowledge of the scientific topic using various forms of information.

Workload:

Total: 180 h

80 h studying of course content through exercises / case studies (self-study)

20 h studying of course content using provided materials (self-study)

20 h studying of course content using literarture (self-study)

60 h lecture and exercise course (attendance)

Conditions: None		**Credit Requirements:** Bestehen der Modulprüfung

Module PHM-0264: Functional and Smart Macromolecular Materials		6 ECTS/LP
Version 1.0.0 (since WS21/22) Person responsible for module: PD Dr. Klaus Ruhland		

Contents:

Electro-active polymeric materials

- Intrinsically electric conducting polymers (ICPs)
- Working principles of ICPs in selected applications
- Red/Ox-responsive ICPs
- Electrochromism
- Electroactive Actuators
- Non-electric-conducting electrically functional polymers
- Ferroelectric polymers
- Piezoelectric polymers
- Dielectric elastomers

Thermo-active polymeric materials

- Difference between invertibility and reversibility
- Pyro-electric effect vs electro-caloric effect
- High-temperature-stabile polymers
- Thermochromic polymers

Mechano-active polymeric materials

- Shape-Memory-polymers
- Self-healing polymers

Photo-active polymeric materials

- Important chromophors and switching mechanisms
- Photo-responsive polymerization initiators and catalysts

Smart polymer gels

- Thermo-responsive polymer gels (LCST/UCST)
- Electrically charged polymer gels
- pH-responsive polymer gels

Learning Outcomes / Competences:

It will be explained how functional properties can be implemented into polymeric materials and how the polymeric material can be designed to contain molecular switches which by action of an external stimulus (electric, thermal, mechanic, chemical) tunes the property profile of the material space and time resolved (implementation of smart behaviour).

Examples for applications of this type of material design will be discussed.

Workload:

Total: 180 h

80 h studying of course content using provided materials (self-study)

20 h studying of course content using literarture (self-study)

60 h lecture (attendance)

20 h exercise course (attendance)
