
Module Catalogue

Master Materials Science and Engineering

Faculty of Mathematics, Natural Sciences, and Materials Engineering

Examination regulations of 17.02.2022

You can see the other use cases of the modules in Digicampus.

Index by Module Groups

1) 1 Basics of Materials Science (ECTS: 18)

Version 1 (since SoSe22)

MRM-0143: Materials Engineering (6 ECTS/LP, Pflicht) *	9
MRM-0144: Materials Simulation (6 ECTS/LP, Pflicht) *	11
PHM-0144: Materials Physics (6 ECTS/LP, Pflicht) *	13

2) 2 Structural and Functional Materials (ECTS: 18)

Version 3 (since WS23/24)

MRM-0025: Fiber Reinforced Polymers for Engineers (6 ECTS/LP, Wahlpflicht) *	15
MRM-0126: Ceramic Matrix Composites (6 ECTS/LP, Wahlpflicht) *	16
MRM-0128: Bioinspired Composites (6 ECTS/LP, Wahlpflicht).....	18
MRM-0136: Mechanical Characterization of Materials (6 ECTS/LP, Wahlpflicht).....	20
MRM-0142: Complex 3D Structures and Components from 2D Materials (6 ECTS/LP, Wahlpflicht) *	22
PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP).....	24
PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht).....	26
PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (6 ECTS/LP, Wahlpflicht) *	28
PHM-0056: Ion-Solid Interaction (6 ECTS/LP, Wahlpflicht).....	30
PHM-0057: Physics of Thin Films (6 ECTS/LP, Wahlpflicht).....	32
PHM-0058: Organic Semiconductors (6 ECTS/LP, Wahlpflicht).....	34
PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht).....	36
PHM-0060: Low Temperature Physics (6 ECTS/LP, Wahlpflicht) *	38
PHM-0066: Superconductivity (6 ECTS/LP, Wahlpflicht).....	40
PHM-0068: Spintronics (6 ECTS/LP, Wahlpflicht).....	42
PHM-0069: Applied Magnetic Materials and Methods (6 ECTS/LP, Wahlpflicht).....	44
PHM-0117: Surfaces and Interfaces (6 ECTS/LP) *	46
PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht) *	48
PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht) *	50
PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht).....	52

* = At least one course for this module is offered in the current semester

Table of Contents

PHM-0193: Plasma Material Interaction (6 ECTS/LP, Wahlpflicht) *	54
PHM-0203: Physics of Cells (6 ECTS/LP, Wahlpflicht) *	56
PHM-0225: Analog Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht) *	58
PHM-0226: Digital Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht).....	60
PHM-0228: Symmetry concepts and their applications in solid state physics and materials science (6 ECTS/LP, Wahlpflicht).....	61
PHM-0252: Optical Excitations in Materials (6 ECTS/LP, Wahlpflicht) *	63
PHM-0253: Dielectric Materials (6 ECTS/LP, Wahlpflicht).....	65
PHM-0268: Porous Functional Materials (6 ECTS/LP, Wahlpflicht) *	67
PHM-0269: Materials for electrochemical energy storage (6 ECTS/LP, Wahlpflicht).....	69
PHM-0271: Photonic Materials (6 ECTS/LP, Wahlpflicht) *	71
PHM-0276: Modern Diffraction Techniques in Materials Science (6 ECTS/LP) *	73
PHM-0301: Supramolecules and molecular design in materials science (6 ECTS/LP, Wahlpflicht)....	75
PHM-0361: Catalysis (6 ECTS/LP) *	77

3) 3 Digital Materials and Technologies (ECTS: 12)

Version 3 (since WS23/24)

INF-0277: Analyzing Massive Data Sets (8 ECTS/LP, Wahlpflicht).....	79
INF-0316: Machine Learning and Computer Vision (8 ECTS/LP, Wahlpflicht).....	81
MRM-0112: Finite element modeling of multiphysics phenomena (6 ECTS/LP, Wahlpflicht).....	83
MRM-0152: Continuum Mechanics and Material Modeling (6 ECTS/LP, Wahlpflicht).....	85
MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) (6 ECTS/LP, Wahlpflicht) *	87
MRM-0156: Structural optimization (6 ECTS/LP, Wahlpflicht).....	89
PHM-0174: Theoretical Concepts and Simulation (6 ECTS/LP, Wahlpflicht) *	91
PHM-0270: Computational Chemistry and Material Modeling (6 ECTS/LP).....	93

4) 4 Materials Sustainability (ECTS: 6)

Version 2 (since SoSe23)

MRM-0087: Sustainable Chemistry of Materials and Resources - Chemical Reactions and Cycles (6 ECTS/LP, Wahlpflicht).....	95
MRM-0089: Recycling of composites (6 ECTS/LP, Wahlpflicht).....	97
MRM-0155: Resource and Waste Mineralogy (6 ECTS/LP, Wahlpflicht).....	99
PHM-0167: Oxidation and Corrosion (6 ECTS/LP, Wahlpflicht) *	101

* = At least one course for this module is offered in the current semester

Table of Contents

PHM-0266: Analytical Methods for Crystalline Sustainable Materials (6 ECTS/LP, Wahlpflicht).....	103
PHM-0267: Fundamentals of Materials for Energy (6 ECTS/LP, Wahlpflicht) *	104

5) 5 Additional Elective (ECTS: 6)

Version 3 (since WS23/24)

Ein weiteres Modul aus den Gruppen 2-4 (Functional and Structural Materials, Digital Materials and Technologies, Materials Sustainability)

One further module out of module groups 2 to 4 (Functional and Structural Materials, Digital Materials and Technologies, Materials Sustainability)

INF-0277: Analyzing Massive Data Sets (8 ECTS/LP, Wahlpflicht).....	106
INF-0316: Machine Learning and Computer Vision (8 ECTS/LP, Wahlpflicht).....	108
MRM-0025: Fiber Reinforced Polymers for Engineers (6 ECTS/LP, Wahlpflicht) *	110
MRM-0087: Sustainable Chemistry of Materials and Resources - Chemical Reactions and Cycles (6 ECTS/LP, Wahlpflicht).....	111
MRM-0089: Recycling of composites (6 ECTS/LP).....	113
MRM-0112: Finite element modeling of multiphysics phenomena (6 ECTS/LP, Wahlpflicht).....	115
MRM-0126: Ceramic Matrix Composites (6 ECTS/LP, Wahlpflicht) *	117
MRM-0128: Bioinspired Composites (6 ECTS/LP, Wahlpflicht).....	119
MRM-0136: Mechanical Characterization of Materials (6 ECTS/LP, Wahlpflicht).....	121
MRM-0142: Complex 3D Structures and Components from 2D Materials (6 ECTS/LP, Wahlpflicht) *	123
MRM-0152: Continuum Mechanics and Material Modeling (6 ECTS/LP).....	125
MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) (6 ECTS/LP) *	127
MRM-0155: Resource and Waste Mineralogy (6 ECTS/LP).....	129
MRM-0156: Structural optimization (6 ECTS/LP).....	131
PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP, Wahlpflicht).....	133
PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht).....	135
PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (6 ECTS/LP, Wahlpflicht) *	137
PHM-0056: Ion-Solid Interaction (6 ECTS/LP, Wahlpflicht).....	139
PHM-0057: Physics of Thin Films (6 ECTS/LP, Wahlpflicht).....	141
PHM-0058: Organic Semiconductors (6 ECTS/LP, Wahlpflicht).....	143
PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht).....	145
PHM-0060: Low Temperature Physics (6 ECTS/LP, Wahlpflicht) *	147

* = At least one course for this module is offered in the current semester

Table of Contents

PHM-0066: Superconductivity (6 ECTS/LP, Wahlpflicht).....	149
PHM-0068: Spintronics (6 ECTS/LP, Wahlpflicht).....	151
PHM-0069: Applied Magnetic Materials and Methods (6 ECTS/LP, Wahlpflicht).....	153
PHM-0117: Surfaces and Interfaces (6 ECTS/LP) *	155
PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht) *	157
PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht) *	159
PHM-0167: Oxidation and Corrosion (6 ECTS/LP, Wahlpflicht) *	161
PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht).....	163
PHM-0174: Theoretical Concepts and Simulation (6 ECTS/LP, Wahlpflicht) *	165
PHM-0193: Plasma Material Interaction (6 ECTS/LP, Wahlpflicht) *	167
PHM-0203: Physics of Cells (6 ECTS/LP, Wahlpflicht) *	169
PHM-0225: Analog Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht) * ...	171
PHM-0226: Digital Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht).....	173
PHM-0228: Symmetry concepts and their applications in solid state physics and materials science (6 ECTS/LP, Wahlpflicht).....	174
PHM-0252: Optical Excitations in Materials (6 ECTS/LP, Wahlpflicht) *	176
PHM-0253: Dielectric Materials (6 ECTS/LP, Wahlpflicht).....	178
PHM-0266: Analytical Methods for Crystalline Sustainable Materials (6 ECTS/LP, Wahlpflicht).....	180
PHM-0267: Fundamentals of Materials for Energy (6 ECTS/LP, Wahlpflicht) *	181
PHM-0268: Porous Functional Materials (6 ECTS/LP, Wahlpflicht) *	183
PHM-0269: Materials for electrochemical energy storage (6 ECTS/LP, Wahlpflicht).....	185
PHM-0270: Computational Chemistry and Material Modeling (6 ECTS/LP).....	187
PHM-0271: Photonic Materials (6 ECTS/LP, Wahlpflicht) *	189
PHM-0275: Modern Solid State NMR Methods in Materials Science (6 ECTS/LP, Wahlpflicht) *	191
PHM-0276: Modern Diffraction Techniques in Materials Science (6 ECTS/LP) *	193
PHM-0301: Supramolecules and molecular design in materials science (6 ECTS/LP).....	195
PHM-0361: Catalysis (6 ECTS/LP) *	197

6) 6 Methods in Materials Science (ECTS: 16)

Version 2 (since SoSe23)

PHM-0146: Method Course: Electronics for Physicists and Materials Scientists (8 ECTS/LP, Wahlpflicht) *	199
---	-----

* = At least one course for this module is offered in the current semester

Table of Contents

PHM-0147: Method Course: Electron Microscopy (8 ECTS/LP).....	201
PHM-0148: Method Course: Optical Properties of Solids (8 ECTS/LP, Wahlpflicht).....	203
PHM-0149: Method Course: Methods in Biophysics (8 ECTS/LP, Wahlpflicht).....	205
PHM-0153: Method Course: Magnetic and Superconducting Materials (8 ECTS/LP, Wahlpflicht)....	207
PHM-0154: Method Course: Modern Solid State NMR Spectroscopy (8 ECTS/LP, Wahlpflicht).....	209
PHM-0206: Method Course: Infrared Microspectroscopy under Pressure (8 ECTS/LP, Wahlpflicht) *	211
PHM-0216: Method Course: Thermal Analysis (8 ECTS/LP, Wahlpflicht) *	213
PHM-0223: Method Course: Tools for Scientific Computing (8 ECTS/LP, Wahlpflicht).....	215
PHM-0224: Method Course: Theoretical Concepts and Simulation (8 ECTS/LP, Wahlpflicht).....	218
PHM-0258: Method course: Charge doping effects in semiconductors (8 ECTS/LP, Wahlpflicht) * ...	220
PHM-0285: Method Course: Computational Biophysics (8 ECTS/LP).....	222
PHM-0287: Method Course: Spectroscopy of Organic Semiconductors (8 ECTS/LP, Wahlpflicht) *	224
PHM-0297: Method Course: Methods in Bioanalytics (8 ECTS/LP, Wahlpflicht) *	226
PHM-0298: Method course: From macroscopic to microscopic ferroic properties (8 ECTS/LP, Wahlpflicht).....	228
PHM-0363: Method Course: Applying Theoretical Concepts from Non-equilibrium Statistical Physics (8 ECTS/LP) *	230

7) 7 Industrial and Laboratory Applications (ECTS: 10)

Version 2 (since SoSe23)

PHM-0254: Laboratory Project (MSE) (10 ECTS/LP, Wahlpflicht).....	232
PHM-0255: Internship (10 ECTS/LP, Wahlpflicht) *	233

8) 8 Soft Skills (ECTS: 4)

Version 1

ZCS-6601: Softskill-Kurse - Kommunikationskompetenz (2 ECTS/LP, Wahlpflicht) *	234
ZCS-6602: Softskill-Kurse - Sozialkompetenz (2 ECTS/LP, Wahlpflicht) *	236
ZCS-6603: Softskill-Kurse - Methodenkompetenz (2 ECTS/LP, Wahlpflicht) *	238

9) 9 Finals (ECTS: 30)

Version 1 (since SoSe22)

PHM-0283: Masterthesis (26 ECTS/LP, Pflicht).....	240
PHM-0284: Colloquium (4 ECTS/LP, Pflicht) *	241

* = At least one course for this module is offered in the current semester

Table of Contents

10) FMI - First Year (ECTS: 62)

Version 1

PHM-0209: Functional Materials (International) – first year (Institut National Polytechnique de Grenoble) (62 ECTS/LP, Wahlpflicht).....	242
--	-----

11) FMI 2 Structural and Functional Materials (ECTS: 6)

Version 3 (since WS23/24)

MRM-0025: Fiber Reinforced Polymers for Engineers (6 ECTS/LP, Wahlpflicht) *	243
MRM-0126: Ceramic Matrix Composites (6 ECTS/LP, Wahlpflicht) *	244
MRM-0128: Bioinspired Composites (6 ECTS/LP, Wahlpflicht).....	246
MRM-0136: Mechanical Characterization of Materials (6 ECTS/LP, Wahlpflicht).....	248
MRM-0142: Complex 3D Structures and Components from 2D Materials (6 ECTS/LP, Wahlpflicht) *	250
PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP, Wahlpflicht).....	252
PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht).....	254
PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (6 ECTS/LP, Wahlpflicht) *	256
PHM-0056: Ion-Solid Interaction (6 ECTS/LP, Wahlpflicht).....	258
PHM-0057: Physics of Thin Films (6 ECTS/LP, Wahlpflicht).....	260
PHM-0058: Organic Semiconductors (6 ECTS/LP, Wahlpflicht).....	262
PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht).....	264
PHM-0060: Low Temperature Physics (6 ECTS/LP, Wahlpflicht) *	266
PHM-0066: Superconductivity (6 ECTS/LP, Wahlpflicht).....	268
PHM-0068: Spintronics (6 ECTS/LP, Wahlpflicht).....	270
PHM-0069: Applied Magnetic Materials and Methods (6 ECTS/LP, Wahlpflicht).....	272
PHM-0117: Surfaces and Interfaces (6 ECTS/LP) *	274
PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht) *	276
PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht) *	278
PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht).....	280
PHM-0193: Plasma Material Interaction (6 ECTS/LP, Wahlpflicht) *	282
PHM-0203: Physics of Cells (6 ECTS/LP, Wahlpflicht) *	284
PHM-0225: Analog Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht) * ...	286

* = At least one course for this module is offered in the current semester

Table of Contents

PHM-0226: Digital Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht).....	288
PHM-0228: Symmetry concepts and their applications in solid state physics and materials science (6 ECTS/LP, Wahlpflicht).....	289
PHM-0252: Optical Excitations in Materials (6 ECTS/LP, Wahlpflicht) *	291
PHM-0253: Dielectric Materials (6 ECTS/LP, Wahlpflicht).....	293
PHM-0268: Porous Functional Materials (6 ECTS/LP, Wahlpflicht) *	295
PHM-0269: Materials for electrochemical energy storage (6 ECTS/LP, Wahlpflicht).....	297
PHM-0271: Photonic Materials (6 ECTS/LP, Wahlpflicht) *	299
PHM-0276: Modern Diffraction Techniques in Materials Science (6 ECTS/LP) *	301
PHM-0301: Supramolecules and molecular design in materials science (6 ECTS/LP, Wahlpflicht)...	303
PHM-0361: Catalysis (6 ECTS/LP) *	305

12) FMI 3 Digital Materials and Technologies (ECTS: 6)

Version 1 (since SoSe22)

INF-0277: Analyzing Massive Data Sets (8 ECTS/LP, Wahlpflicht).....	307
INF-0316: Machine Learning and Computer Vision (8 ECTS/LP, Wahlpflicht).....	309
MRM-0112: Finite element modeling of multiphysics phenomena (6 ECTS/LP, Wahlpflicht).....	311
MRM-0144: Materials Simulation (6 ECTS/LP) *	313
MRM-0152: Continuum Mechanics and Material Modeling (6 ECTS/LP, Wahlpflicht).....	315
MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) (6 ECTS/LP) *	317
MRM-0156: Structural optimization (6 ECTS/LP, Wahlpflicht).....	319
PHM-0174: Theoretical Concepts and Simulation (6 ECTS/LP, Wahlpflicht) *	321
PHM-0270: Computational Chemistry and Material Modeling (6 ECTS/LP).....	323

* = At least one course for this module is offered in the current semester

Module MRM-0143: Materials Engineering <i>Materials Engineering</i>	6 ECTS/LP	
Version 1.1.0 Person responsible for module: Prof. Dr.-Ing. Nils Meyer		
Contents:		
<ul style="list-style-type: none"> • Introduction: basics of materials science, goals of materials science for engineering • Chemical bondings, amorphous and crystalline structures • Material classes and their principle properties • Metals • Polymers • Ceramics and glasses • Natural materials • Reinforced materials • Resource management and sustainability of materials • Processing and design of materials for engineering application 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • The students know the basic terms and concepts of materials for engineering application. • The students have the competence to explain material properties and describe their specific functionality. • The students are able to choose the right materials according to application relevant conditions. • The students are able to design components considering principle properties of materials. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload:		
Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
Conditions:		
Basic knowledge of material science.		
Frequency: each winter semester	Recommended Semester: from 1.	
Minimal Duration of the Module: 1 semester[s]		
Contact Hours: 4		
Repeat Exams Permitted: any		
Parts of the Module		
Part of the Module: Materials Engineering		
Mode of Instruction: lecture		
Language: English		
Contact Hours: 3		
Learning Outcome: see description of module		
Contents: see description of module		
Literature:		
<ul style="list-style-type: none"> • W.D. Callister, Materials Science and Engineering (Wiley) • D. Askeland, P. Phule, The Science and Engineering of Materials • M.F. Ashby, D.R.H. Jones, Engineering Materials (Cambridge Univ. Press) • G. Gottstein, Physikalische Grundlagen der Materialkunde (Springer) 		
Assigned Courses:		

Materials Engineering (lecture + exercise)
Examination
Materials Engineering oral exam / length of examination: 30 minutes, graded
Parts of the Module
Part of the Module: Materials Engineering
Mode of Instruction: exercise course
Language: English
Contact Hours: 1
Learning Outcome: see description of module
Contents: see description of module
Assigned Courses:
Materials Engineering (lecture + exercise)

Module MRM-0144: Materials Simulation <i>Materials Simulation</i>	6 ECTS/LP	
Version 1.0.0 Person responsible for module: Prof. Dr.-Ing. Christian Weißenfels Prof. Dr. Ferdinand Haider		
Contents:		
<ol style="list-style-type: none"> 1. Introduction to atomistic models 2. Basics of molecular dynamics simulations 3. Interatomic potentials for molecular dynamics simulations 4. Applications of molecular dynamics simulations using LAMMPS 5. Visualization of results using Ovito 6. Finite-Element-Method for bars 7. Finite Element-Method for beams 8. Concepts of homogenization for bars and beams 9. Plasticity for bars and beams 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • The students understand the concepts and limitations of atomistic simulations for simple materials • The students know how to apply MD simulations for simple cases • The students acquire the competence for an appropriate choice of simulation algorithm and interatomic potentials • The students learn to visualize results of atomistic simulations using powerful tools like Ovito • The students know the basic concepts of the Finite-Element-Method, homogenization and plasticity • The students apply this concept to bars and beams • The students have the competence to code algorithms to solve simple engineering problems • Integrated acquisition of soft skills: independent handling of hard- and software while using English documentation, ability to investigate abstract circumstances with the help of a computer and present the results in written form, capacity for teamwork. 		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 120 h studying of course content using provided materials (self-study)		
Conditions: Elementary knowledge of programming Basic knowledge of engineering mechanics	Credit Requirements: Bestehen der Modulprüfung	
Frequency: each winter semester		
Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]	
Contact Hours: 4		
Repeat Exams Permitted: according to the examination regulations of the study program		
Parts of the Module		
Part of the Module: Exercise to Materials Simulation Mode of Instruction: exercise course Language: English Contact Hours: 2		
Learning Outcome: See description of module		

Contents:

Assigned Courses:

Materials Simulation (lecture)

Examination

Materials Simulation

written exam / length of examination: 90 minutes, graded

Module PHM-0144: Materials Physics <i>Materials Physics</i>	6 ECTS/LP	
Version 1.1.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Helmut Karl		
Contents: <ul style="list-style-type: none"> • Electrons in solids • Phonons • Properties of metals, semiconductors and insulators • Application in optical, electronic, and optoelectronic devices • Dielectric solids, optical properties 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students know the basic terms and concepts of solid state physics like the free electron gas, electronic band structure, charge carrier statistics, phonons, doping and optical properties, • are capable to apply derived approximations as the effective mass or the electron-hole concept to describe basic characteristics of semiconductor materials, • have the competence to apply these concepts for the description of electric, electro-optic and thermal properties of solids and to describe their functionalities, • understand size effects on material physical properties. • Integrated acquirement of soft skills: Working with specialist literature, literature search and interdisciplinary thinking. 		
Remarks: compulsory module		
Workload: Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
Conditions: basic knowledge of solid state physics		
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Materials Physics Mode of Instruction: lecture Language: English Contact Hours: 3		
Learning Outcome: see module description		

Contents:

- Electrons in solids: Free electron gas, band structure, effective mass
- Lattice dynamics: Phonons, phonon dispersion, acoustic and optical phonons
- Properties of metals: Electrical conductivity, Fermi surfaces, thermal properties
- Properties of semiconductors: Pure, intrinsic semiconductors, equilibrium conditions, doping
- Properties of dielectric materials: Propagation of electromagnetic waves, frequency dependent optical properties, polarization effects.
- Application in devices: Heterostructures, Schottky contact, pn-junction, solar cell, light emission and technological aspects

Assigned Courses:

Materials Physics (Tutorial) (exercise course)

Examination

Materials Physics

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Materials Physics

Module MRM-0025: Fiber Reinforced Polymers for Engineers <i>Faserverbundkunststoffe - Produktion und Anwendung</i>	6 ECTS/LP	
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr.-Ing. Michael Kupke		
Learning Outcomes / Competences:		
Die Studierenden - kennen die Vor- und Nachteile von Faserverbundwerkstoffen in Herstellung und Anwendung - haben ein Verständnis über faserverbundgerechte Bauweisen - kennen das Prinzip der Bauweisenbewertung für das Produkt		
Remarks: Ansprechpartnerin: Prof. Dr.-Ing. Michael Kupke, Tobias Karrasch (tobias.karrasch@mrm.uni-augsburg.de)		
Workload: Total: 180 h		
Conditions: none	Credit Requirements: Schriftliche Prüfung	
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 2	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Faserverbundkunststoffe für Ingenieure Mode of Instruction: lecture Lecturers: Prof. Dr.-Ing. Michael Kupke Language: German Contact Hours: 2		
Contents: 1. Grundlagen 2. Herstellung 3. Produktion 4. Anwendung		
Lehr-/Lernmethoden: Tafelanschrift und Beamerpräsentation		
Literature: wird in der Vorlesung bekannt gegeben		
Assigned Courses: Faserverbundkunststoffe – Produktion und Anwendung (Faserverbundkunststoffe für Ing.) (lecture)		
Examination Faserverbundkunststoffe für Ingenieure written exam, Schriftliche Prüfung, graded		

Module MRM-0126: Ceramic Matrix Composites <i>Keramische Faserverbundwerkstoffe</i>	6 ECTS/LP
Version 3.0.0 (since WS21/22)	
Person responsible for module: Prof. Dr.-Ing. Dietmar Koch	
Contents: <ul style="list-style-type: none"> • Introduction in ceramic matrix composites • Basics of processing of technical ceramics • Processing chain of ceramic matrix composites (CMC) from raw materials to product • Processing and properties of ceramic fibers • Principal mechanisms of reinforcement in CMC • Properties of CMC • Application of CMC 	
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students know the basic concepts of mechanical behavior of ceramic matrix composites • The students have the competence to explain processing of ceramic fibers and ceramic matrix composites and describe their specific properties • The students know the Weibull statistics which describe the fiber strength distribution • The students know how to describe mechanical interactions between fiber and matrix • The students get the knowledge of application of ceramic matrix composites and are able to choose the according material for specific application. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content 	
Workload: Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)	
Conditions: Recommended: basic knowledge of materials	Credit Requirements: Passing the module exam
Frequency: each winter semester	
Contact Hours: 4	Recommended Semester: from 1. Repeat Exams Permitted: according to the examination regulations of the study program

Module MRM-0136: Mechanical Characterization of Materials <i>Mechanical Characterization of Materials</i>	6 ECTS/LP	
Version 1.1.0 (since SoSe21) Person responsible for module: Prof. Dr. Markus Sause		
Contents:		
The following topics are presented:		
<ul style="list-style-type: none"> • Introduction to material characterization • Linear material behaviour • Non-linear material behaviour • Material failure • Measurement technologies • Tensile testing • Compression testing • Shear testing • Other static testing concepts • Fracture mechanics • Assembly testing • Surface mechanics • Creep testing • Fatigue testing • High-Velocity testing • Component testing 		
Learning Outcomes / Competences:		
The students:		
<ul style="list-style-type: none"> • Acquire knowledge in the field of materials testing and evaluation of materials. • Are introduced to important concepts in measurement techniques, and material models. • Are able to independently acquire further knowledge of the scientific topic using various forms of information. 		
Workload:		
Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 60 h lecture and exercise course (attendance)		
Conditions: None	Credit Requirements: Passing the module exam	
Frequency: each summer semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]

Examination

Physics and Technology of Semiconductor Devices

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Physics and Technology of Semiconductor Devices

Module PHM-0049: Nanostructures / Nanophysics <i>Nanostructures / Nanophysics</i>	6 ECTS/LP	
Version 1.2.0 (since WS09/10) Person responsible for module: Prof. Dr. István Kézsmárki		
Contents:		
<ol style="list-style-type: none"> 1. Semiconductor quantum wells, wires and dots, low dimensional electron systems 2. Magnetotransport in low-dimensional systems, Quantum-Hall-Effect, Quantized conductance 3. Optical properties of nanostructures and their application in modern optoelectronic devices, Nanophotonics 4. Fabrication and detection techniques of nanostructures 5. Ferroic properties of nanostructures (Ferroelectricity, Magnetism, Multiferroicity) 6. Nano-bio-magnetism (magnetotactic bacteria, magnetoreception, malaria) 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • The students gain basic knowledge of the fundamental concepts in modern nanoscale science. • The students have detailed knowledge of low-dimensional semiconductor structures and how these systems can be applied for novel functional devices for high-frequency electronics and optoelectronics • The students gain competence in selecting different fabrication and characterization approaches for specific nanostructures. • The students are able apply these concepts to tackle present problems in nanophysics. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload:		
Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study)		
Conditions: recommended prerequisites: basic knowledge in solid-state physics and quantum mechanics.

Contents:

- Introduction (temperature scale, history of low temperature physics)
- Properties of matter at low temperatures (specific heat, thermal expansion, electrical resistance, thermal conductivity)
- Cryoliquids and superfluidity (nitrogen, hydrogen, 4-He and 3-He: phase diagrams, superfluidity)
- Cryogenic engineering (liquefaction of gases, helium cryostats, dilution refrigerator, adiabatic demagnetization, further techniques)
- Thermometry (primary and secondary thermometers at different temperature regimes)
- Quantum Matter (quantum Transport, Quantum phase transitions, Quantum spin liquids)

Examination

Low Temperature Physics

oral exam / length of examination: 30 minutes, graded

Examination Prerequisites:

Low Temperature Physics

Module PHM-0066: Superconductivity <i>Superconductivity</i>	6 ECTS/LP
Version 1.0.0 (since WS11/12) Person responsible for module: Prof. Dr. Philipp Gegenwart	
Contents: <ul style="list-style-type: none"> • Introductory Remarks and Literature • History and Main Properties of the Superconducting State, an Overview • Phenomenological Thermodynamics and Electrodynamics of the SC • Ginzburg-Landau Theory • Microscopic Theories • Fundamental Experiments on the Nature of the Superconducting State • Josephson-Effects • High Temperature Superconductors • Application of Superconductivity 	
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • will get an introduction to superconductivity, • by a presentation of experimental results they will learn the fundamental properties of the superconducting state, • are informed about the most important technical applications of superconductivity. • Special attention will be drawn to the basic concepts of the main phenomeno-logical and microscopic theories of the superconducting state, to explain the experimental observations. • For self-studies a comprehensive list of further reading will be supplied. 	
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study)	
Conditions: <ul style="list-style-type: none"> • Physik IV – Solid-state physics • Theoretical physics I-III 	
Frequency: each summer semester not in summer term 2023	Recommended Semester: from 2.
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Examination Prerequisites:

Superconductivity

Module PHM-0068: Spintronics <i>Spintronics</i>	6 ECTS/LP	
Version 1.7.0 (since SoSe14) Person responsible for module: PD Dr. German Hammerl		
Contents:		
<ul style="list-style-type: none"> • Basic micromagnetic interactions (exchange, anisotropy, DMI, stray fields, external fields) and where they come from • Emergence of spin textures such as domain walls and bubbles/skyrmions • Torques acting on the local magnetization (magnetic field torque, current in-plane spin-transfer torque, spin-Hall effect and spin-orbit torques) • Switching • Motion of spin textures, 1D model and Thiele equation • Magneto-resistance and Hall effects and their utility in electrical readout • Ultrafast effects • Device applications • Experimental techniques in the field of spintronics 		
Learning Outcomes / Competences:		
<p>The students:</p> <ul style="list-style-type: none"> • know the fundamental interactions in magnetic materials, the basic spintronic effects, and the related device structures, • have the competence to deal with current problems in the field of spintronics largely autonomously, • are able to choose materials in order to achieve demanding properties in spintronic applications, • are able to design device components to achieve spin polarization, • acquire scientific skills in finding and understanding current literature dealing with spintronic devices and applications, identifying suitable materials and material combinations with respect to their applicability for spintronic devices. 		
Workload:		
<p>Total: 180 h</p> <p>60 h lecture and exercise course (attendance)</p> <p>20 h studying of course content using provided materials (self-study)</p> <p>80 h studying of course content through exercises / case studies (self-study)</p> <p>20 h studying of course content using literature (self-study)</p>

Module PHM-0252: Optical Excitations in Materials <i>Optical Excitations in Materials</i>	6 ECTS/LP	
Version 1.9.0 (since SoSe20) Person responsible for module: Prof. Dr. Joachim Deisenhofer		
Contents:		
<p>1. Classical Light-Matter Interaction in Solids:</p> <ul style="list-style-type: none"> • Introduction: Typical Optical Response of Metals and Semiconductors • Classical electromagnetic wave propagation in linear optical media (Maxwell Equations, refractive index, reflection, transmission, absorption) • Anisotropic media, birefringence, longitudinal solutions • Classical Drude-Lorentz oscillator model • Spectroscopic techniques: Fourier-Transform-Spectroscopy, Time-domain Spectroscopy, Ellipsometry <p>2. Quantum Aspects of Light-Matter interaction</p> <ul style="list-style-type: none"> • qm approach to absorption and emission: Lorentzian lineshape, Fermi's Golden Rule • Electric-dipole and magnetic-dipole approximation • Rabi-oscillations and the need for quantum optical approaches • A glimpse of non-linear optics <p>3. Excitations in different material classes</p> <ul style="list-style-type: none"> • Optical properties of semiconductors/insulators, molecular materials, metals • Absorption and Luminescence, excitons, luminescence centers • Optoelectronics, detectors, light emitting devices • Quantum confined structures: tuning of absorption and emission 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • The students gain basic knowledge of the fundamental concepts of light-matter interaction in solids. • The students have detailed knowledge of classical models of light-propagation and absorption and get the competence to choose adequate spectroscopic techniques for measuring the optical properties of different material classes. • The students have a basic understanding of quantum aspects of optical processes in different materials. • The students are able apply these concepts to understand and analyse optical properties of different materials. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload:		
<p>Total: 180 h</p> <p>20 h studying of course content using literature (self-study)</p> <p>80 h studying of course content through exercises / case studies (self-study)</p> <p>20 h studying of course content using provided materials (self-study)</p> <p>60 h lecture and exercise course (attendance)</p>		
Conditions:		
Basic knowledge of classical electrodynamics, atomic and solid state physics.		
Frequency: each semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module

Optical Excitations in Materials (lecture)

Examination

Optical Excitations in Materials

written exam / length of examination: 90 minutes, graded

Module PHM-0253: Dielectric Materials <i>Dielectric Materials</i>	6 ECTS/LP	
Version 2.0.0 (since SoSe23) Person responsible for module: PD Dr. Peter Lunkenheimer		
Contents:		
<ul style="list-style-type: none"> • Experimental techniques: quantities, broadband dielectric spectroscopy, nonlinear and polarization measurements • Dynamic processes in dielectric materials: relaxation processes, phenomenological models • Dielectric properties of disordered matter: liquids, glasses, plastic crystals • Charge transport: hopping conductivity, universal dielectric response • Ionic conductivity: conductivity mechanism, dielectric properties, advanced electrolytes for energy-storage devices • Maxwell-Wagner relaxations: equivalent-circuits, applications (supercapacitors), colossal-dielectric-constant materials • Electroceramics: Materials, Properties (relaxor ferroelectric, ferroelectric, antiferroelectric and multiferroic), Applications 		
Learning Outcomes / Competences:		
<p>Students know the fundamentals of electromagnetic wave propagation and have a sound background for a broad spectrum of dielectric phenomena. They are able to analyze materials requirements and to interpret dielectric spectra in a broad frequency range. They have the competence to select materials for different kinds of applications and to critically assess experimental results on dielectric properties.</p>		
Remarks:		
Elective compulsory module		
Workload:		
<p>Total: 180 h</p> <p>20 h studying of course content using provided materials (self-study)</p> <p>20 h studying of course content using literature (self-study)</p> <p>80 h studying of course content through exercises / case studies (self-study)</p> <p>60 h lecture and exercise course (attendance)</p>		
Conditions:

Module PHM-0361: Catalysis <i>Catalysis</i>	6 ECTS/LP	
Version 1.0.0 (since WS23/24) Person responsible for module: Prof. Dr. Wolfgang Scherer		
Contents: Introduction to catalysis (history and milestones) Basic principles of <i>homogeneous</i> and <i>heterogeneous</i> catalysis Homogeneous and heterogeneous <i>catalytic processes</i>		
Examples: <ul style="list-style-type: none">• Activation and utilization of carbon dioxide in catalytic processes• Methane conversion to methanol, hydrogen and ammonia• Carbonylation of methanol• Carbon monoxide conversion• Nitrogen fixation• Polymerization of olefines• Hydrogenation and hydroformylation of olefins, Fischer-Tropsch synthesis, C1 chemistry• Metathesis		
Learning Outcomes / Competences: By completing this course, the students <ul style="list-style-type: none">• gain the <i>knowledge</i> in fundamental concepts of homogeneous and heterogeneous catalysis to <i>understand</i> complex reaction mechanisms, the chemical bonding, structural chemistry and chemical properties of homogeneous and heterogeneous catalysts.• they gain <i>practical skills</i> to synthesize and characterize homogeneous and heterogeneous catalysts by means of spectroscopic techniques (UV-Vis, NMR, IR und Raman spectroscopy).• they gain the <i>intellectual skills</i> to design/optimize catalysts with regard to external control parameters (pressure, temperature, solvents) and intrinsic factors (steric request/electronic structure of the catalytically active sites).• they obtain the <i>transferrable skills</i> to extract relevant information from scientific literature.		
Remarks: The module can be studied in the MSc programs "Materialchemie", "Materials Science" and "Materials Science and Engineering"		
Workload: Total: 180 h		
Conditions: Basic knowledge in inorganic and organic chemistry	Credit Requirements: Passing the module exam	
Frequency: each winter semester each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Module INF-0277: Analyzing Massive Data Sets <i>Analyzing Massive Data Sets</i>	8 ECTS/LP	
Version 1.2.0 (since SoSe18) Person responsible for module: Prof. Dr. Peter Michael Fischer		
Learning Outcomes / Competences:		
After attending the course, students will be able to understand and evaluate the concepts and methods, procedures, techniques, and technologies for analyzing massively large data sets. Possible content includes:		
<ul style="list-style-type: none"> • Fundamentals of information retrieval • Similarity search and clustering • Analysis of data streams and temporal data • Web graphs: Link analysis and social networks • Dynamic networks and information diffusion • Recommender systems and online advertising • Computational methods for massive data sets 		
Students will also be able to implement technical solution concepts for analyzing large data sets in programs.		
Key Skills: Ability to think logically, analytically and conceptually, weigh up approaches to solutions, acquire abstraction skills; subject-specific in-depth knowledge; implement subject-specific solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives and evaluation in the respective application context; selection and confident application of suitable methods; ability to make scientifically meaningful evaluations using suitable methods; ability to solve problems under practical boundary conditions; competence in recognizing significant technical developments;		
Workload:		
Total: 240 h 30 h studying of course content using literature (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using provided materials (self-study) 60 h lecture (attendance) 30 h exercise course (attendance)		
Conditions:		
Module Database Systems (INF-0073) - recommended Module Discrete structures for computer science (INF-0109) - recommended Module Computer Science 3 (INF-0111) - recommended		
Frequency: Sommersemester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Module INF-0316: Machine Learning and Computer Vision <i>Machine Learning and Computer Vision</i>	8 ECTS/LP
Version 1.0.0 (since SoSe19) Person responsible for module: Prof. Dr. Rainer Lienhart	
Learning Outcomes / Competences:	
<p>After successful participation in this module, students possess advanced knowledge of machine learning (decision trees, neural networks and deep neural networks, hypothesis evaluation, instance-based learning, Bayesian learning, learning theory), data reduction (e.g. principal component analysis), advanced image processing and machine vision and are able to apply them. They can analyse, understand and programmatically implement scientifically complex procedures in the field of multimedia data processing, as well as to appropriately apply the principles learned to new problems. They develop skills in logical, analytical and conceptual thinking in the field of digital signal processing and multimedia data processing.</p>	
<p>Key qualifications: advanced mathematical-formal logic; implementation of subject-specific solution concepts; interdisciplinary knowledge; development and implementation of solution strategies for complex problems; systematic further development of design methods; ability to solve problems under practical boundary conditions.</p>	
Workload:	
<p>Total: 240 h 30 h exercise course (attendance) 60 h lecture (attendance) 30 h studying of course content using provided materials (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study)</p>

Parts of the Module	
<p>Part of the Module: Machine Learning and Computer Vision (Lecture) Mode of Instruction: lecture Language: German Contact Hours: 4</p>	
Contents:	
<p>The lecture gives a good overview of all aspects of machine learning and machine extraction of information from multimedia data (e.g. "Google Image Search", "Google Goggles"). The learned concepts will be practised, analysed, and evaluated in the exercises using successful examples from practice. At the end of the semester, advanced topics such as object detection and object recognition of faces and people will be covered. The contents of the lecture include: Machine Learning (Decision Tree Learning, Artificial Neural Networks, Bayesian Learning, Discrete Adaboost), Data Reduction (Quantization (K-Means Clustering, Affinity Propagation), Dimensionality Reduction Techniques (PCA, NMF, Random Projection, MDS)) and Image Processing & Computer Vision (Salient Feature Points and Feature Descriptors, Object Detection (Face/Car/People Detection), Object Recognition (Face Recognition), Image Search with pLSA).</p>	
Literature:	
Literature references will be announced at the beginning of the semester.	

Part of the Module: Machine Learning and Computer Vision (Tutorial)

Mode of Instruction: exercise course

Language: German

Contact Hours: 2

Examination

Machine Learning and Computer Vision (Exam)

written exam / length of examination: 120 minutes, graded

Test Frequency:

each semester

Description:

The examination can be taken every semester during the examination period.

Module MRM-0112: Finite element modeling of multiphysics phenomena <i>Finite-Elemente-Modellierung von Multiphysik-Phänomenen</i>	6 ECTS/LP
Version 2.9.0 (since WS19/20) Person responsible for module: Prof. Dr. Markus Sause Dozenten: Prof. Dr. Sause / Prof. Dr Peter	
Learning Outcomes / Competences:	
The students	
<ul style="list-style-type: none"> • get to know existing numerical methods for modeling and simulation of physical processes and systems • Learn the use and application of numerical methods for realistic problems • Are able to apply basic functional principles of a FEM program by using "COMSOL Multiphysics". 	
Remarks: This module is offered by faculty from MRM and Mathematics. It is intended for physics, MSE and WING students, who want to get an insight into a modern FEM program as it is used in academic and industrial applications.	
Workload: Total: 180 h	
Conditions: Recommended: MTH-6110 - Numerische Verfahren für Materialwissenschaftler, Physiker und Wirtschaftsingenieure	Credit Requirements: Bestehen der Modulprüfung
Frequency: each summer semester	Recommended Semester: from 1.
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
Part of the Module: <i>Finite-Elemente-Modellierung von Multiphysik-Phänomenen</i> Mode of Instruction: lecture Lecturers: Prof. Dr. Malte Peter, Prof. Dr. Markus Sause Language: German Contact Hours: 2	
Contents: The following content will be presented: <ul style="list-style-type: none"> • Modeling and simulation of physical processes and systems. • Basic concepts of FEM programs • Generation of meshes • Optimization strategies • Selection of solver algorithms • Example applications from electrodynamics • Example applications from thermodynamics • Example applications from continuum mechanics • Example applications from fluid dynamics • Coupling of differential equations for the solution of multiphysics phenomena 	
Lehr-/Lernmethoden: Slide presentation, classroom discussion

Module MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) <i>CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering)</i>	6 ECTS/LP
--	-----------

Version 1.0.0

Person responsible for module: Prof. Dr.-Ing. Dietmar Koch

Contents:

The development of ceramic fiber composite components is an iterative product development process due to the component-specific material properties. These iterations serve to assess feasibility or material characterization and are often associated with time-, cost-, and resource-intensive testing programs, feature prototypes, or demonstrator components. Therefore, this approach is heuristic (trial and error).

In contrast, CMC (Ceramic Matrix Composite) product development through ICME (Integrated Computational Materials Engineering) aims to partially shift the development process into the virtual space using ICME tools, thereby minimizing real sample and component testing through the use of digital models. The ICME approach originally developed for metallic materials can be applied particularly to fiber-reinforced composites due to their pronounced dependence on material properties on the manufacturing process and component geometry.

Learning Outcomes / Competences:

In the lecture on CMC (Ceramic Matrix Composite) product development using ICME (Integrated Computational Materials Engineering), students are provided with an overview of the current state of technology, the currently available ICME tools in the field of fiber-reinforced composites, and their application through case studies.

Conditions: Keine	Credit Requirements: Bestehen der Modulprüfung	
Frequency: each winter semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]

Module PHM-0174: Theoretical Concepts and Simulation <i>Theoretical Concepts and Simulation</i>	6 ECTS/LP
Version 1.1.0 (since WS09/10) Person responsible for module: Prof. Dr. Liviu Chioncel	
Contents:	
<ol style="list-style-type: none"> 1. Introduction: operating systems, programming languages, data visualization tools 2. Basic numerical methods: interpolation, integration 3. Ordinary and Partial Differential Equations (e.g., diffusion equation, Schrödinger equation) 4. Concepts in atomistic materials modelling 5. Simulation of material's properties (molecular spectroscopy, magnetism) 	
Learning Outcomes / Competences:	
<p>The students:</p> <ul style="list-style-type: none"> • know the principal concepts of the numerical methods relevant in material science, • are able to solve simple problems numerically. They are able to write the codes and to present the results, • are able to choose the adequate levels of description and approximations for a given problem and apply the corresponding methods, • have the expertise to judge the quality and validity of the numerical results, • Integrated acquirement of soft skills: independent handling of hard- and software while using English documentations, ability to investigate abstract circumstances with the help of a computer and to present the results in written and oral form, capacity for teamwork. 	
Remarks:	
<p>Links to exemplary software related to the course:</p> <ul style="list-style-type: none"> • http://www.bloodshed.net/ • http://www.cplusplus.com/doc/tutorial/ • http://www.cygwin.com/ • http://avogadro.cc/ • http://orcaforum.kofo.mpg.de/app.php/portal

Module PHM-0270: Computational Chemistry and Material Modeling <i>Computerchemie/Materialmodellierung</i>	6 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: PD Georg Eickerling	
Contents:	
The lecture provides advanced insights into computational chemistry and modeling of molecular and solid-state materials:	
<ul style="list-style-type: none"> • advanced introduction into the methods and concepts of quantum-chemical calculations • <i>mean-field</i> and <i>Density Functional Theory</i> methods • methods for describing electronic correlation • modeling chemical reactions of molecular compounds • from molecules to solids: modeling materials employing periodic boundary conditions • modeling dynamic and spectroscopic properties of molecules and solids (IR, Raman, NMR UV/VIS) • modeling materials under pressure • modeling surfaces 	
Learning Outcomes / Competences:	
The students	
<ul style="list-style-type: none"> • know advanced concepts for modeling molecular and solid state compounds • are able to evaluate the applicability of these concepts to a range of questions that might occur within the scope of materials chemistry and are thus able to evaluate the required and achievable accuracy of the selected computational method • are able to apply the obtained knowledge of the theoretical concepts within the scope of hands-on quantum chemical calculations and under guidance develop strategies for investigating theoretical aspects of materials chemistry • have the expertise to analyze, understand and evaluate the results obtained from different quantum chemical calculation methods and are competent to develop strategies for an advanced analysis of thus problems 	
Workload:	
Total: 180 h 45 h lecture (attendance) 15 h exercise course (attendance) 30 h studying of course content using literature (self-study) 60 h studying of course content through exercises / case studies (self-study) 30 h (self-study)

Module PHM-0267: Fundamentals of Materials for Energy <i>Fundamentals of Materials for Energy</i>	6 ECTS/LP
Version 2.2.0 (since SoSe23) Person responsible for module: Prof. Dr. Wolfgang Brütting	
Contents: This class teaches fundamentals of conventional as well as renewable energy conversion.	
The following topics will be addressed: <ul style="list-style-type: none">• Basics facts on energy conversion and climate change• Fossil energy• Nuclear energy• Renewable energy• Energy storage and transport	
Learning Outcomes / Competences: Students know the fundamentals of different energy technologies. They are able to assess their respective efficiency and their potential for covering current and future energy demand. They are able to deal with a specific problem using up-to-date literature and participate in the ongoing discussion about how to cover our increasing need for various forms of energy.	
Conditions: Sound background in physics, in particular solid state physics and thermodynamics.	Credit Requirements: Seminar presentation + written handout.
Frequency: Wintersemester	Recommended Semester:
Contact Hours: 5	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
Part of the Module: Fundamentals of Materials for Energy Mode of Instruction: lecture Lecturers: Prof. Dr. Wolfgang Brütting Language: English / German Frequency: each winter semester Contact Hours: 3	
Literature: <ul style="list-style-type: none"> • M. Stutzmann, C. Csoklich: The Physics of Renewable Energy (Springer) • J. Fricke, W.L. Borst: Essentials of Energy Technology (Wiley-VCH) • D.S. Ginley, D. Cahen: Fundamentals of Materials for Energy and Environmental Sustainability (Cambridge Univ. Press) • D.J.C. MacKay: Sustainable Energy - without the hot air (https://www.withouthotair.com/) 	
Assigned Courses: Fundamentals of Materials for Energy (lecture)	

Examination

Fundamentals of Materials for Energy

lecture + accompanying seminar / length of examination: 45 minutes, graded

Description:

30min seminar presentation + 15min discussion, together with a detailed written handout

Parts of the Module

Part of the Module: Fundamentals of Materials for Energy (Tutorial)

Mode of Instruction: exercise course

Language: English / German

Contact Hours: 2

Assigned Courses:

Fundamentals of Materials for Energy (Tutorial) (exercise course)

Module INF-0277: Analyzing Massive Data Sets <i>Analyzing Massive Data Sets</i>	8 ECTS/LP	
Version 1.2.0 (since SoSe18) Person responsible for module: Prof. Dr. Peter Michael Fischer		
Learning Outcomes / Competences:		
After attending the course, students will be able to understand and evaluate the concepts and methods, procedures, techniques, and technologies for analyzing massively large data sets. Possible content includes:		
<ul style="list-style-type: none"> • Fundamentals of information retrieval • Similarity search and clustering • Analysis of data streams and temporal data • Web graphs: Link analysis and social networks • Dynamic networks and information diffusion • Recommender systems and online advertising • Computational methods for massive data sets 		
Students will also be able to implement technical solution concepts for analyzing large data sets in programs.		
Key Skills: Ability to think logically, analytically and conceptually, weigh up approaches to solutions, acquire abstraction skills; subject-specific in-depth knowledge; implement subject-specific solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives and evaluation in the respective application context; selection and confident application of suitable methods; ability to make scientifically meaningful evaluations using suitable methods; ability to solve problems under practical boundary conditions; competence in recognizing significant technical developments;		
Workload:		
Total: 240 h 30 h studying of course content using literature (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using provided materials (self-study) 60 h lecture (attendance) 30 h exercise course (attendance)		
Conditions:		
Module Database Systems (INF-0073) - recommended Module Discrete structures for computer science (INF-0109) - recommended Module Computer Science 3 (INF-0111) - recommended		
Frequency: Sommersemester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Analyzing Massive Data Sets (Vorlesung) Mode of Instruction: lecture Language: English Frequency: irregular (usu. summer semester) Contact Hours: 4		
Contents: The lecture covers basic concepts for the analysis of massively large data sets such as information extraction, similarity search, clustering, link and network analysis as well as their implementation.		

Literature:

- Mining of Massive Datasets. J. Leskovec, A. Rajaraman, J.D. Ullman. Cambridge UniversityPress, 2014

Weitere Literatur wird in der Vorlesung bekannt gegeben

Part of the Module: Analyzing Massive Data Sets (Übung)

Mode of Instruction: exercise course

Language: English / German

Frequency: irregular (usu. summer semester)

Contact Hours: 2

Examination

Analyzing Massive Data Sets

written exam / length of examination: 90 minutes, graded

Test Frequency:

when a course is offered

Module INF-0316: Machine Learning and Computer Vision <i>Machine Learning and Computer Vision</i>	8 ECTS/LP
Version 1.0.0 (since SoSe19) Person responsible for module: Prof. Dr. Rainer Lienhart	
Learning Outcomes / Competences:	
<p>After successful participation in this module, students possess advanced knowledge of machine learning (decision trees, neural networks and deep neural networks, hypothesis evaluation, instance-based learning, Bayesian learning, learning theory), data reduction (e.g. principal component analysis), advanced image processing and machine vision and are able to apply them. They can analyse, understand and programmatically implement scientifically complex procedures in the field of multimedia data processing, as well as to appropriately apply the principles learned to new problems. They develop skills in logical, analytical and conceptual thinking in the field of digital signal processing and multimedia data processing.</p>	
<p>Key qualifications: advanced mathematical-formal logic; implementation of subject-specific solution concepts; interdisciplinary knowledge; development and implementation of solution strategies for complex problems; systematic further development of design methods; ability to solve problems under practical boundary conditions.</p>	
Workload:	
<p>Total: 240 h 30 h exercise course (attendance) 60 h lecture (attendance) 30 h studying of course content using provided materials (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study)</p>	
Conditions:	
none	
Frequency: each summer semester	Recommended Semester: from 1.
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
<p>Part of the Module: Machine Learning and Computer Vision (Lecture) Mode of Instruction: lecture Language: German Contact Hours: 4</p>	
Contents:	
<p>The lecture gives a good overview of all aspects of machine learning and machine extraction of information from multimedia data (e.g. "Google Image Search", "Google Goggles"). The learned concepts will be practised, analysed, and evaluated in the exercises using successful examples from practice. At the end of the semester, advanced topics such as object detection and object recognition of faces and people will be covered. The contents of the lecture include: Machine Learning (Decision Tree Learning, Artificial Neural Networks, Bayesian Learning, Discrete Adaboost), Data Reduction (Quantization (K-Means Clustering, Affinity Propagation), Dimensionality Reduction Techniques (PCA, NMF, Random Projection, MDS)) and Image Processing & Computer Vision (Salient Feature Points and Feature Descriptors, Object Detection (Face/Car/People Detection), Object Recognition (Face Recognition), Image Search with pLSA).</p>	
Literature:	
Literature references will be announced at the beginning of the semester.	

Part of the Module: Machine Learning and Computer Vision (Tutorial)

Mode of Instruction: exercise course

Language: German

Contact Hours: 2

Examination

Machine Learning and Computer Vision (Exam)

written exam / length of examination: 120 minutes, graded

Test Frequency:

each semester

Description:

The examination can be taken every semester during the examination period.

Module MRM-0025: Fiber Reinforced Polymers for Engineers <i>Faserverbundkunststoffe - Produktion und Anwendung</i>	6 ECTS/LP	
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr.-Ing. Michael Kupke		
Learning Outcomes / Competences:		
Die Studierenden - kennen die Vor- und Nachteile von Faserverbundwerkstoffen in Herstellung und Anwendung - haben ein Verständnis über faserverbundgerechte Bauweisen - kennen das Prinzip der Bauweisenbewertung für das Produkt		
Remarks: Ansprechpartnerin: Prof. Dr.-Ing. Michael Kupke, Tobias Karrasch (tobias.karrasch@mrm.uni-augsburg.de)		
Workload: Total: 180 h		
Conditions: none	Credit Requirements: Schriftliche Prüfung	
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 2	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Faserverbundkunststoffe für Ingenieure Mode of Instruction: lecture Lecturers: Prof. Dr.-Ing. Michael Kupke Language: German Contact Hours: 2		
Contents: 1. Grundlagen 2. Herstellung 3. Produktion 4. Anwendung		
Lehr-/Lernmethoden: Tafelanschrift und Beamerpräsentation		
Literature: wird in der Vorlesung bekannt gegeben		
Assigned Courses: Faserverbundkunststoffe – Produktion und Anwendung (Faserverbundkunststoffe für Ing.) (lecture)		
Examination Faserverbundkunststoffe für Ingenieure written exam, Schriftliche Prüfung, graded		

Module MRM-0087: Sustainable Chemistry of Materials and Resources - Chemical Reactions and Cycles <i>Nachhaltige Chemie der Materialien und Ressourcen - Reaktionen und Kreisläufe</i>	6 ECTS/LP	
Version 1.0.0 (since SoSe16) Person responsible for module: Prof. Dr. Richard Weihrich		
Contents:		
<ul style="list-style-type: none"> • Introduction: resources and materials • Demand of resources and materials: principles and megatrends • Sustainability, criticality and resource efficiency: principles and concepts • Mining, preparation, and processing of raw materials like Si, Fe, Cu, Al, Ga, Ag, Au, Pt • Methods of separation and purification of raw materials • Methods of synthesis and preparations of functional materials from solid, liquid, and gaseous phase • Thermodynamics, kinetics, and reversibility of chemical reactions • Recycling, and circular use of resources 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • The students know the basic terms and concepts of sustainability, criticality and use of materials and resources • The students know the basic terms and concepts of chemical processing of raw and functional materials • The students have the competence to explain chemical processes of purification and preparation and describe their specific use. • The students are able to describe need of resources and energy of relevant processes. • The students are able to classify materials and processes with respect to sustainability, demand of raw materials, and circularity. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload: Total: 180 h		
Conditions: none	Credit Requirements: Bestehen der Modulprüfung	
Frequency: each winter semester

Module MRM-0089: Recycling of composites <i>Recycling von Verbundwerkstoffen (Composites)</i>	6 ECTS/LP
Version 3.0.0 (since SoSe23) Person responsible for module: Dr. Kunzmann	
Learning Outcomes / Competences: Die Studierenden lernen <ul style="list-style-type: none">• basierend auf den möglichen Grundprinzipien der Stofftrennung die Kriterien für die richtige Verfahrenswahl im Bereich Recycling von Faserverbundwerkstoffen (Composites) kennen und üben deren Anwendung in Beispielaufgaben• die wichtigsten Verfahren zur Stofftrennung und –aufbereitung kennen und analysieren deren technische Ausführungsformen und deren Auslegung an Beispielen• die Beurteilungsmaßstäbe für die unterschiedlichen Prozessschritte bezüglich technischer, qualitativer und wirtschaftlicher Kriterien auf die Prozessschritte des Recyclings anzuwenden• die wichtigsten chemischen, physikalischen und technischen Schritte der Stofftrennung auf das Recycling von Composites anzuwenden	
Workload: Total: 180 h	
Conditions: none	Credit Requirements: Bestehen der Modulprüfung
Frequency: each summer semester	
Contact Hours: 3	Recommended Semester: Minimal Duration of the Module: any 1 semester[s]
Parts of the Module	

Part of the Module: Recycling von Verbundwerkstoffen (Composites)**Mode of Instruction:** lecture**Language:** German**Contact Hours:** 2

Contents:

- Prinzipien der Stofftrennung beim Recycling von Rohstoffen
 - Chemische Trennung
 - Physikalische Trennung
 - Mechanische Trennung
 - Sonderformen der Separierung
- Stoffgruppen des Verbundwerkstoff Recyclings
 - End of Life (EOL) Bauteile
 - Verharzte Abfälle
 - Unverharzte Abfälle
- Prozessabläufe und –verfahren der Stoffseparierung
 - Trennung der Kunststofffraktionen (Harze, Thermoplaste) und der textilen Fraktionen
 - 1) Pyrolyse
 - 2) Solvolyse
 - 3) Chemische Verfahren
 - Kunststoffrecycling
 - Textilrecycling
 - 1) Vorbereitung
 - 2) Öffnen
 - 3) Mischen
- Herstellung textiler Halbzeuge
 - Vliesbilden
 - Garnbilden
 - Flächenerzeugung aus Geweben, Gewirken, Geflechten, Gelegen
 - Direktformen
- Weiterverarbeitung zu Composites
- Weiterverarbeitung zu anderen Recyclingprodukten
- Auslegung und Wirtschaftlichkeit
- Ökologische Bilanzierung, LCA

Examination

Recycling von Verbundwerkstoffen (Composites)

written exam / length of examination: 90 minutes, graded

Parts of the Module

Part of the Module: Übung zu Recycling von Verbundwerkstoffen (Composites)

Mode of Instruction: exercise course

Language: German

Contact Hours: 1

Contents:

- Auslegung und Berechnung der einzelnen Verfahrensschritte des Composite Recyclings
- Erarbeitung von Kriterienkatalogen für die Auswahl der Prozessschritte
- Praktische Übungen an Maschinen des Textil Recyclings im Labor des Instituts für Textiltechnik Augsburg
- Realisierung von Demonstrator Halbzeugen aus eigener Berechnung und Versuchen an Pilotmaschinen
- Exkursionen zu ausgewählten Betrieben der Recyclingindustrie

Module MRM-0112: Finite element modeling of multiphysics phenomena <i>Finite-Elemente-Modellierung von Multiphysik-Phänomenen</i>	6 ECTS/LP
Version 2.9.0 (since WS19/20) Person responsible for module: Prof. Dr. Markus Sause Dozenten: Prof. Dr. Sause / Prof. Dr Peter	
Learning Outcomes / Competences:	
The students	
<ul style="list-style-type: none"> • get to know existing numerical methods for modeling and simulation of physical processes and systems • Learn the use and application of numerical methods for realistic problems • Are able to apply basic functional principles of a FEM program by using "COMSOL Multiphysics". 	
Remarks: This module is offered by faculty from MRM and Mathematics. It is intended for physics, MSE and WING students, who want to get an insight into a modern FEM program as it is used in academic and industrial applications.	
Workload: Total: 180 h	
Conditions: Recommended: MTH-6110 - Numerische Verfahren für Materialwissenschaftler, Physiker und Wirtschaftsingenieure	Credit Requirements: Bestehen der Modulprüfung
Frequency: each summer semester	Recommended Semester: from 1.
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
Part of the Module: <i>Finite-Elemente-Modellierung von Multiphysik-Phänomenen</i> Mode of Instruction: lecture Lecturers: Prof. Dr. Malte Peter, Prof. Dr. Markus Sause Language: German Contact Hours: 2	
Contents: The following content will be presented: <ul style="list-style-type: none"> • Modeling and simulation of physical processes and systems. • Basic concepts of FEM programs • Generation of meshes • Optimization strategies • Selection of solver algorithms • Example applications from electrodynamics • Example applications from thermodynamics • Example applications from continuum mechanics • Example applications from fluid dynamics • Coupling of differential equations for the solution of multiphysics phenomena 	
Lehr-/Lernmethoden: Slide presentation, classroom discussion

Independent reflection of topics to deepen the lecture content

Module MRM-0126: Ceramic Matrix Composites <i>Keramische Faserverbundwerkstoffe</i>	6 ECTS/LP
Version 3.0.0 (since WS21/22)	
Person responsible for module: Prof. Dr.-Ing. Dietmar Koch	
Contents: <ul style="list-style-type: none"> • Introduction in ceramic matrix composites • Basics of processing of technical ceramics • Processing chain of ceramic matrix composites (CMC) from raw materials to product • Processing and properties of ceramic fibers • Principal mechanisms of reinforcement in CMC • Properties of CMC • Application of CMC 	
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students know the basic concepts of mechanical behavior of ceramic matrix composites • The students have the competence to explain processing of ceramic fibers and ceramic matrix composites and describe their specific properties • The students know the Weibull statistics which describe the fiber strength distribution • The students know how to describe mechanical interactions between fiber and matrix • The students get the knowledge of application of ceramic matrix composites and are able to choose the according material for specific application. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content 	
Workload: Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)	
Conditions: Recommended: basic knowledge of materials	Credit Requirements: Passing the module exam
Frequency: each winter semester

Module MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) <i>CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering)</i>	6 ECTS/LP
--	-----------

Version 1.0.0

Person responsible for module: Prof. Dr.-Ing. Dietmar Koch

Contents:

The development of ceramic fiber composite components is an iterative product development process due to the component-specific material properties. These iterations serve to assess feasibility or material characterization and are often associated with time-, cost-, and resource-intensive testing programs, feature prototypes, or demonstrator components. Therefore, this approach is heuristic (trial and error).

In contrast, CMC (Ceramic Matrix Composite) product development through ICME (Integrated Computational Materials Engineering) aims to partially shift the development process into the virtual space using ICME tools, thereby minimizing real sample and component testing through the use of digital models. The ICME approach originally developed for metallic materials can be applied particularly to fiber-reinforced composites due to their pronounced dependence on material properties on the manufacturing process and component geometry.

Learning Outcomes / Competences:

In the lecture on CMC (Ceramic Matrix Composite) product development using ICME (Integrated Computational Materials Engineering), students are provided with an overview of the current state of technology, the currently available ICME tools in the field of fiber-reinforced composites, and their application through case studies.

Conditions: Keine	Credit Requirements: Bestehen der Modulprüfung	
Frequency: each winter semester	Recommended Semester:	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Übung zu CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering)

Mode of Instruction: exercise course

Language: German

Contact Hours: 1

Assigned Courses:

CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering) (lecture)

Parts of the Module

Part of the Module: CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering)

Mode of Instruction: lecture

Language: German

Contact Hours: 3

Lehr-/Lernmethoden:

Die Vorlesung findet im seminaristischen Stil statt und wird mit Fallstudien ergänzt. Die Übungen bestehen aus Übungsaufgaben zum aktuellen Vorlesungsinhalt. Zum Lösen der Aufgaben werden neben den Vorlesungsunterlagen und Musterlösungen auch eigens hierfür erstellte Kurzvideos bereitgestellt. Fragen zu den Aufgaben werden gemeinsam in der Vorlesung besprochen und geklärt.

Assigned Courses:

CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering) (lecture)

Examination

CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering)

written exam / length of examination: 60 minutes, graded

Module MRM-0155: Resource and Waste Mineralogy <i>Rohstoff- und Abfallmineralogie</i>	6 ECTS/LP
---	-----------

Version 1.0.0

Person responsible for module: Prof. Dr. Daniel Vollprecht

Contents:

1. Introduction: What is Mineralogy?
2. General Mineralogy
3. Special Mineralogy
4. Economic Geology
5. Mineral Processing
6. Technical Mineralogy
7. Archaeometry
8. Waste Mineralogy
9. Environmental Mineralogy

Learning Outcomes / Competences:

The students

- know the research subject and research methods of mineralogy
- are able to determine the most important minerals by their diagnostic properties
- understand the processes of formation of deposits
- know mineral property and element raw materials
- understand mineral reactions in technical processes of metallurgy and ceramics
- understand the principles of hydraulic and alkali-activated binders
- understand the inorganic-chemical reactions in thermal waste treatment plants
- know mineral by-products and wastes
- know the application of mineralogical methods in archaeology
- are able to apply mineralogical methods to mineral resources and wastes
- understand the interactions between natural and synthetic mineral phases and their environment

Remarks:

Registration via DigiCampus required

Workload:

Total: 180 h

Conditions: Comprehensive knowledge of chemistry	Credit Requirements: Participation in the excercises Passing the module exam
Frequency: each summer semester	Recommended Semester: from 2.
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Physics and Technology of Semiconductor Devices

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Physics and Technology of Semiconductor Devices

Module PHM-0049: Nanostructures / Nanophysics <i>Nanostructures / Nanophysics</i>	6 ECTS/LP	
Version 1.2.0 (since WS09/10) Person responsible for module: Prof. Dr. István Kézsmárki		
Contents:		
<ol style="list-style-type: none"> 1. Semiconductor quantum wells, wires and dots, low dimensional electron systems 2. Magnetotransport in low-dimensional systems, Quantum-Hall-Effect, Quantized conductance 3. Optical properties of nanostructures and their application in modern optoelectronic devices, Nanophotonics 4. Fabrication and detection techniques of nanostructures 5. Ferroic properties of nanostructures (Ferroelectricity, Magnetism, Multiferroicity) 6. Nano-bio-magnetism (magnetotactic bacteria, magnetoreception, malaria) 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • The students gain basic knowledge of the fundamental concepts in modern nanoscale science. • The students have detailed knowledge of low-dimensional semiconductor structures and how these systems can be applied for novel functional devices for high-frequency electronics and optoelectronics • The students gain competence in selecting different fabrication and characterization approaches for specific nanostructures. • The students are able apply these concepts to tackle present problems in nanophysics. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload:		
Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study)

Examination		
Digital Electronics Digital Electronics for Physicists and Materials Scientists written exam / length of examination: 90 minutes, graded Test Frequency: only in the summer semester		

<p>Module PHM-0228: Symmetry concepts and their applications in solid state physics and materials science</p> <p><i>Symmetry concepts and their applications in solid state physics and materials science</i></p> <p>Version 1.0.0 (since WS18/19) Person responsible for module: Prof. Dr. István Kézsmárki Deisenhofer, Joachim, Dr.</p> <p>Contents: The topical outline of the course is as follows:</p> <ul style="list-style-type: none"> • Introduction and common examples <ul style="list-style-type: none"> ◦ Motivating examples ◦ Polar and axial vectors and tensors ◦ Spatial and temporal symmetries and charge conjugation ◦ Symmetries of measurable quantities and fields ◦ Symmetries of physical laws (classical and quantum) ◦ Conservation laws (linear and angular momentum, energy, etc.) ◦ Symmetry of measurement configurations (reciprocity, etc.) • Neumann principle <ul style="list-style-type: none"> ◦ Linear response theory and Onsager relations ◦ Applications to vector and tensor quantities: electric and magnetic dipole moment of molecules; ferroelectricity, ferromagnetism, piezoelectricity and magnetoelectricity in crystals; wave propagation in anisotropic media (sound and light) • Symmetry allowed energy terms <ul style="list-style-type: none"> ◦ On the level of classical free energy: Polar, nematic and magnetic order parameters (Landau expansion) ◦ On the level of Hamiltonians: Molecular vibrations, crystal field potential, magnetic interactions • Symmetry of physical states <ul style="list-style-type: none"> ◦ Spatial inversion and parity eigenstates ◦ Discrete translations and the Bloch states • Spontaneous symmetry breaking upon phase transitions (Landau theory) • Outlook: Symmetry guides for skyrmion-host materials, multiferroic compounds and axion insulators 	6 ECTS/LP
<p>Learning Outcomes / Competences:</p> <ul style="list-style-type: none"> • The students know the simple use of symmetry concepts to understand phenomena and material properties without performing detailed calculations. • The students know how to make minimal plans for experiments using the symmetry of the studied materials or vice versa how to determine the symmetry of materials from the output of experiments. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 	
<p>Workload:</p> <p>Total: 180 h</p> <p>60 h (attendance)</p> <p>60 h exam preparation (self-study)</p> <p>60 h studying of course content (self-study)</p>	

Conditions: Background in basic quantum mechanics is required.		
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module

<p>Part of the Module: Symmetry concepts and their applications in solid state physics and materials science (Tutorial)</p> <p>Mode of Instruction: exercise course</p> <p>Language: English</p> <p>Contact Hours: 1</p>

Module PHM-0252: Optical Excitations in Materials <i>Optical Excitations in Materials</i>	6 ECTS/LP	
Version 1.9.0 (since SoSe20) Person responsible for module: Prof. Dr. Joachim Deisenhofer		
Contents:		
<p>1. Classical Light-Matter Interaction in Solids:</p> <ul style="list-style-type: none"> • Introduction: Typical Optical Response of Metals and Semiconductors • Classical electromagnetic wave propagation in linear optical media (Maxwell Equations, refractive index, reflection, transmission, absorption) • Anisotropic media, birefringence, longitudinal solutions • Classical Drude-Lorentz oscillator model • Spectroscopic techniques: Fourier-Transform-Spectroscopy, Time-domain Spectroscopy, Ellipsometry <p>2. Quantum Aspects of Light-Matter interaction</p> <ul style="list-style-type: none"> • qm approach to absorption and emission: Lorentzian lineshape, Fermi's Golden Rule • Electric-dipole and magnetic-dipole approximation • Rabi-oscillations and the need for quantum optical approaches • A glimpse of non-linear optics <p>3. Excitations in different material classes</p> <ul style="list-style-type: none"> • Optical properties of semiconductors/insulators, molecular materials, metals • Absorption and Luminescence, excitons, luminescence centers • Optoelectronics, detectors, light emitting devices • Quantum confined structures: tuning of absorption and emission 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • The students gain basic knowledge of the fundamental concepts of light-matter interaction in solids. • The students have detailed knowledge of classical models of light-propagation and absorption and get the competence to choose adequate spectroscopic techniques for measuring the optical properties of different material classes. • The students have a basic understanding of quantum aspects of optical processes in different materials. • The students are able apply these concepts to understand and analyse optical properties of different materials. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload:		
<p>Total: 180 h</p> <p>20 h studying of course content using literature (self-study)</p> <p>80 h studying of course content through exercises / case studies (self-study)</p> <p>20 h studying of course content using provided materials (self-study)</p> <p>60 h lecture and exercise course (attendance)</p>		
Conditions:		
Basic knowledge of classical electrodynamics, atomic and solid state physics.		
Frequency: each semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Optical Excitations in Materials
Mode of Instruction: lecture
Language: English
Contact Hours: 4
ECTS Credits: 6.0
Literature: <ol style="list-style-type: none">1. Mark Fox, Optical Properties of Solids, Oxford Master Series2. Mark Fox, Quantum Optics: An Introduction, Oxford Master Series3. David B. Tanner, Optical Effects in Solids, Cambridge University Press4. Y. Toyozawa, Optical Processes in Solids, Cambridge University Press

Optical Excitations in Materials (lecture)

Examination
Optical Excitations in Materials
written exam / length of examination: 90 minutes, graded

Module PHM-0253: Dielectric Materials <i>Dielectric Materials</i>	6 ECTS/LP
Version 2.0.0 (since SoSe23)	
Person responsible for module: PD Dr. Peter Lunkenheimer	
Contents:	
<ul style="list-style-type: none"> • Experimental techniques: quantities, broadband dielectric spectroscopy, nonlinear and polarization measurements • Dynamic processes in dielectric materials: relaxation processes, phenomenological models • Dielectric properties of disordered matter: liquids, glasses, plastic crystals • Charge transport: hopping conductivity, universal dielectric response • Ionic conductivity: conductivity mechanism, dielectric properties, advanced electrolytes for energy-storage devices • Maxwell-Wagner relaxations: equivalent-circuits, applications (supercapacitors), colossal-dielectric-constant materials • Electroceramics: Materials, Properties (relaxor ferroelectric, ferroelectric, antiferroelectric and multiferroic), Applications 	
Learning Outcomes / Competences:	
Students know the fundamentals of electromagnetic wave propagation and have a sound background for a broad spectrum of dielectric phenomena. They are able to analyze materials requirements and to interpret dielectric spectra in a broad frequency range. They have the competence to select materials for different kinds of applications and to critically assess experimental results on dielectric properties.	
Remarks:	
Elective compulsory module	
Workload:	
Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)	
Conditions: Basic knowledge of solid state physics	Credit Requirements: Pass of module exam
Frequency: each summer semester	
Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
Part of the Module: Dielectric Materials Mode of Instruction: lecture Lecturers: PD Dr. Peter Lunkenheimer Language: English / alle Sprachen

Examination

Dielectric Materials Dielectric Materials

presentation / length of examination: 45 minutes, graded

Examination Prerequisites:

Dielectric Materials

Module PHM-0266: Analytical Methods for Crystalline Sustainable Materials <i>Analytical Methods for Crystalline Sustainable Materials</i>	6 ECTS/LP	
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. Dr. Christine Kuntscher		
Contents: The course will introduce diffraction methods and various spectroscopic methods including x-ray diffraction, energy-dispersive x-ray spectroscopy, photoemission spectroscopy, infrared and Raman spectroscopy, scanning electron microscopy, and scanning tunneling microscopy and spectroscopy.		
Learning Outcomes / Competences: After attending the course, the students will know the physical basics of various analytical methods and their possible applications for the characterization of crystalline sustainable materials.		
Workload: Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Recommended: good knowledge in materials science	Credit Requirements: Bestehen der Modulprüfung	
Frequency: as needed	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program

Examination Analytical Methods for Crystalline Sustainable Materials written exam / length of examination: 90 minutes, graded		

Module PHM-0267: Fundamentals of Materials for Energy <i>Fundamentals of Materials for Energy</i>	6 ECTS/LP
Version 2.2.0 (since SoSe23) Person responsible for module: Prof. Dr. Wolfgang Brütting	
Contents: This class teaches fundamentals of conventional as well as renewable energy conversion.	
The following topics will be addressed: <ul style="list-style-type: none">• Basics facts on energy conversion and climate change• Fossil energy• Nuclear energy• Renewable energy• Energy storage and transport	
Learning Outcomes / Competences: Students know the fundamentals of different energy technologies. They are able to assess their respective efficiency and their potential for covering current and future energy demand. They are able to deal with a specific problem using up-to-date literature and participate in the ongoing discussion about how to cover our increasing need for various forms of energy.	
Conditions: Sound background in physics, in particular solid state physics and thermodynamics.	Credit Requirements: Seminar presentation + written handout.
Frequency: Wintersemester	Recommended Semester:
Contact Hours: 5	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
Part of the Module: Fundamentals of Materials for Energy Mode of Instruction: lecture Lecturers: Prof. Dr. Wolfgang Brütting Language: English / German Frequency: each winter semester Contact Hours: 3

oral exam, Einzel- oder Gruppenprüfung; Prüfungsdauer pro Person: 30 Minuten, graded

Module PHM-0270: Computational Chemistry and Material Modeling <i>Computerchemie/Materialmodellierung</i>	6 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: PD Georg Eickerling	
Contents:	
The lecture provides advanced insights into computational chemistry and modeling of molecular and solid-state materials:	
<ul style="list-style-type: none"> • advanced introduction into the methods and concepts of quantum-chemical calculations • <i>mean-field</i> and <i>Density Functional Theory</i> methods • methods for describing electronic correlation • modeling chemical reactions of molecular compounds • from molecules to solids: modeling materials employing periodic boundary conditions • modeling dynamic and spectroscopic properties of molecules and solids (IR, Raman, NMR UV/VIS) • modeling materials under pressure • modeling surfaces 	
Learning Outcomes / Competences:	
The students	
<ul style="list-style-type: none"> • know advanced concepts for modeling molecular and solid state compounds • are able to evaluate the applicability of these concepts to a range of questions that might occur within the scope of materials chemistry and are thus able to evaluate the required and achievable accuracy of the selected computational method • are able to apply the obtained knowledge of the theoretical concepts within the scope of hands-on quantum chemical calculations and under guidance develop strategies for investigating theoretical aspects of materials chemistry • have the expertise to analyze, understand and evaluate the results obtained from different quantum chemical calculation methods and are competent to develop strategies for an advanced analysis of thus problems 	
Workload:	
Total: 180 h 45 h lecture (attendance) 15 h exercise course (attendance) 30 h studying of course content using literature (self-study) 60 h studying of course content through exercises / case studies (self-study) 30 h (self-study)

Moderne Diffraktionsmethoden in den Materialwissenschaften

written exam / length of examination: 90 minutes, graded

Module PHM-0301: Supramolecules and molecular design in materials science <i>Supramoleküle und molekulares Design in den Materialwissenschaften</i>	6 ECTS/LP	
Version 1.0.0 (since SoSe23) Person responsible for module: Dr. Hana Bunzen		
Contents:		
<ul style="list-style-type: none"> An introduction and historical overview (supramolecular chemistry, self-assembly, supramolecular materials, molecular machines, etc.) Non-covalent interactions (e.g. H-bonds, electrostatic interactions, hydrophobic effect), thermodynamics Host-guest chemistry and typical hosts (e.g. calixarenes, resorcinarenes, crown ethers, cucurbiturils, cyclodextrins) Concepts of supramolecular synthesis (e.g. template, self-organization, self-sorting, cooperative binding) Methods for characterization of supramolecular compounds (e.g. NMR, UV/Vis titrations, mass spectrometry) Functional molecules (e.g. molecular switches, rotaxanes, sensors, molecular machines) Supramolecular materials (non-covalent polymers, gelators, liquid crystals) Supramolecular interactions in biological molecules (protein folding, ion channels, cell membranes) 		
Learning Outcomes / Competences:		
<p>The students</p> <ul style="list-style-type: none"> know the basic concepts of supramolecular chemistry and typical host molecules, and have a detailed understanding of non-covalent interactions between molecules, can apply the concepts of supramolecular synthesis to unknown compounds and find ways to prepare them, are familiar with methods for analyzing non-covalent interactions and for structural characterization of supramolecular compounds, know the importance of supramolecular chemistry for functional molecules, in materials science and in living systems, acquire scientific skills to search for scientific literature and to evaluate scientific content, are able to independently acquire further knowledge of the scientific topic using various forms of information 		
Workload:		
Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study)		
Conditions: Recommended: basic knowledge in organic chemistry, basic knowledge in coordination chemistry	Credit Requirements: one written examination, 90 min.	
Frequency: each summer semester		
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Supramolecules and molecular design in materials science
Mode of Instruction: lecture
Language: English
Contact Hours: 3
Contents: see module description
Literature: J. Steed, J. Atwood: Supramolecular Chemistry (Wiley) W. Jones, C.N.R. Rao, Supramolecular Organization and Materials Design (Cambridge University Press)
Part of the Module: Supramolecules and molecular design in materials science (Tutorial)
Mode of Instruction: exercise course
Language: English
Contact Hours: 1
Examination
Supramolecules and molecular design in materials science written exam / length of examination: 90 minutes, graded
Examination Prerequisites: Supramolecules and molecular design in materials science

Module PHM-0361: Catalysis <i>Catalysis</i>	6 ECTS/LP	
Version 1.0.0 (since WS23/24) Person responsible for module: Prof. Dr. Wolfgang Scherer		
Contents: Introduction to catalysis (history and milestones) Basic principles of <i>homogeneous</i> and <i>heterogeneous</i> catalysis Homogeneous and heterogeneous <i>catalytic processes</i>		
Examples: <ul style="list-style-type: none">• Activation and utilization of carbon dioxide in catalytic processes• Methane conversion to methanol, hydrogen and ammonia• Carbonylation of methanol• Carbon monoxide conversion• Nitrogen fixation• Polymerization of olefines• Hydrogenation and hydroformylation of olefins, Fischer-Tropsch synthesis, C1 chemistry• Metathesis		
Learning Outcomes / Competences: By completing this course, the students <ul style="list-style-type: none">• gain the <i>knowledge</i> in fundamental concepts of homogeneous and heterogeneous catalysis to <i>understand</i> complex reaction mechanisms, the chemical bonding, structural chemistry and chemical properties of homogeneous and heterogeneous catalysts.• they gain <i>practical skills</i> to synthesize and characterize homogeneous and heterogeneous catalysts by means of spectroscopic techniques (UV-Vis, NMR, IR und Raman spectroscopy).• they gain the <i>intellectual skills</i> to design/optimize catalysts with regard to external control parameters (pressure, temperature, solvents) and intrinsic factors (steric request/electronic structure of the catalytically active sites).• they obtain the <i>transferrable skills</i> to extract relevant information from scientific literature.		
Remarks: The module can be studied in the MSc programs "Materialchemie", "Materials Science" and "Materials Science and Engineering"		
Workload: Total: 180 h		
Conditions: Basic knowledge in inorganic and organic chemistry	Credit Requirements: Passing the module exam	
Frequency: each winter semester each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Catalysis		
Mode of Instruction: lecture		
Language: English / German		
Contact Hours: 3		

Learning Outcome: see module description
Contents: see module description
Lehr-/Lernmethoden: projector presentation, blackboard
Literature: <ul style="list-style-type: none">• D. Steinborn, <i>Grundlagen der metallorganischen Komplexkatalyse</i>, SpringerSpektrum, 3. Auflage, 2019.• Hans-Jürgen Arpe, <i>Industrielle Organische Chemie</i>, Wiley-VCH, 6. Auflage, 2007.
Assigned Courses:
Catalysis (lecture)
Part of the Module: Übung zu Catalysis
Mode of Instruction: exercise course
Language: English / German
Contact Hours: 1
Learning Outcome: see module description
Contents: see module description
Lehr-/Lernmethoden: projector presentation, blackboard
Literature: See module part "Lecture"
Assigned Courses:
Übung zu Catalysis (exercise course)

Examination
Catalysis
written exam / length of examination: 90 minutes, graded

Module PHM-0146: Method Course: Electronics for Physicists and Materials Scientists <i>Method Course: Electronics for Physicists and Materials Scientists</i>	8 ECTS/LP	
Version 2.0.0 (since SoSe22) Person responsible for module: Andreas Hörner		
Contents:		
<ol style="list-style-type: none"> 1. Basics in electronic and electrical engineering 2. Quadrupole theory 3. Analog technique, transistor and opamp circuits 4. Boolean algebra and logic 5. Digital electronics and calculation circuits 6. Microprocessors and Networks 7. Basics in Electronic 8. Implementation of transistors 9. Operational amplifiers 10. Digital electronics 11. Practical circuit arrangement 		
Learning Outcomes / Competences:		
<p>The students:</p> <ul style="list-style-type: none"> • know the basic terms, concepts and phenomena of electronic and electrical engineering for the use in the laboratory, • have skills in easy circuit design, measuring and control technology, analog and digital electronics, • have expertise in independent working on circuit problems. They can calculate and develop easy circuits. 		
Remarks:		
<p>ELECTIVE COMPULSORY MODULE</p> <p>Attendance in the Method Course: Electronics for Physicists and Materials Scientists (combined lab course AND lecture) excludes credit points for the lecture Electronics for Physicists and Materials Scientists.</p>		
Workload:		
<p>Total: 240 h</p> <p>140 h studying of course content using provided materials (self-study)</p> <p>60 h lecture (attendance)</p> <p>10 h preparation of written term papers (self-study)</p> <p>30 h internship / practical course (attendance)</p>		
Conditions: none		Credit Requirements: written report (one per group)
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module

each semester

Module PHM-0147: Method Course: Electron Microscopy <i>Method Course: Electron Microscopy</i>	8 ECTS/LP
Version 1.3.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider	
Contents:	
<p>Scanning electron microscopy (SEM)</p> <ul style="list-style-type: none"> • Electron optical components • Detectors • EDX, EBSD <p>Transmission electron microscopy (TEM)</p> <ul style="list-style-type: none"> • Diffraction • Contrast mechanisms • High resolution EM • Scanning TEM • Analytical TEM • Aberration correction 	
Learning Outcomes / Competences:	
<p>The students:</p> <ul style="list-style-type: none"> • get introduced to the basics of scanning electron microscopy and transmission electron microscopy, using lectures to teach the theoretical basics, which are afterwards deepened using practical courses, • are able to operate SEM and TEM on a basic level • are able to characterize materials using different electron microscopy techniques • Acquire the competence to decide about a technique feasible for a certain problem. • acquire the competence to assess EM images, also regarding artefacts • learn to search for scientific literature and to formulate a scientific report 	
Remarks:	
ELECTIVE COMPULSORY MODULE	
Workload:	
<p>Total: 240 h 90 h lecture and exercise course (attendance) 150 h studying of course content using provided materials (self-study)</p>	
Conditions:	
<p>Recommended: knowledge of solid-state physics, reciprocal lattice</p>	
Credit Requirements:	
<p>regular participation, oral presentation (10 min), written report (one report per group)</p>	
Frequency: each summer semester	Recommended Semester: from 2.
Minimal Duration of the Module: 1 semester[s]	
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
Part of the Module: Method Course: Electron Microscopy Mode of Instruction: lecture Language: English Contact Hours: 2	

Contents:

SEM:

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

TEM:

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM

Module PHM-0223: Method Course: Tools for Scientific Computing <i>Method Course: Tools for Scientific Computing</i>	8 ECTS/LP
Version 1.6.0 (since SoSe18) Person responsible for module: Prof. Dr. Gert-Ludwig Ingold	
Contents:	
<p>Important tools for scientific computing are taught in this module and applied to specific scientific problems by the students. As far as tools depend on a particular programming language, Python will be employed. Tools to be discussed include:</p> <ul style="list-style-type: none"> • numerical libraries like NumPy and SciPy • visualisation of numerical results • use of a version control system like git and its application in collaborative work • testing of code • profiling • documentation of programs 	
Learning Outcomes / Competences:	
<ul style="list-style-type: none"> • The students are capable of solving a physical problem of some complexity by means of numerical techniques. They are able to visualize the results and to adequately document their program code. • The students know examples of numerical libraries and are able to apply them to solve scientific problems. • The students know methods for quality assurance like the use of unit tests and can apply them to their code. They know techniques to identify run-time problems. • The students know a distributed version control system and are able to use it in a practical problem. • The students have gained practical experience in a collaborative project work. They are able to plan and carry out a programming project in a small group. • The students understand the relevance of the tools taught in the method course for good scientific practice. 	
Remarks:	
The number of students will be limited to 12.	
Workload:	
Total: 240 h 60 h studying of course content (self-study) 90 h (attendance) 30 h preparation of presentations (self-study) 60 h preparation of written term papers (self-study)	
Conditions: Knowledge of the programming language Python is expected on the level taught in the module PHM-0243 "Einführung in Prinzipien der Programmierung".	Credit Requirements: The module examination needs to be passed which is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Frequency: irregular	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Contact Hours: 4
Learning Outcome: <ul style="list-style-type: none"> The students are capable of solving a physical problem of some complexity by means of numerical techniques and to visualize the results. They have gained some experience in the application of methods for quality assurance of their code and are able to appropriately document their programs. The students are able to work in a team and know how to make use of tools like Gitlab/Github. The students are able to present the status of their work, to critically assess it and to accept suggestions from others.
Contents: The tools discussed in the lecture will be applied to specific scientific problems by small teams of 2-3 students under supervision. The teams regularly inform the other teams in oral presentations on their progress, the tools employed as well as encountered problems and their solution.

Examination

Method Course: Tools for Scientific Computing

report / work period for assignment: 4 weeks, graded

Test Frequency:

when a course is offered

Description:

The requirement for credit points is based on a scientific programming project carried out in a small team of 2-3 students. The work will be judged on the basis of a joint final report and the contributions of the individual students as documented in the team's Gitlab project. The final report should contain an explanation of the scientific problem and its numerical implementation as well as a presentation of results. The code should be appropriately documented and tested.

Module PHM-0224: Method Course: Theoretical Concepts and Simulation <i>Method Course: Theoretical Concepts and Simulation</i>	8 ECTS/LP	
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr. Liviu Chioncel		
Contents: This module covers Monte-Carlo methods (computational algorithms) for classical and quantum problems. Python as programing language will be employed. The following common applications will be discussed: <ul style="list-style-type: none">• Monte-Carlo integration, stochastic optimization, inverse problems• Feynman path integrals: the connection between classical and quantum systems• Order and disorder in spin systems, fermions, and boson		
Learning Outcomes / Competences: <ul style="list-style-type: none">• The students are capable of obtaining numerical solutions to problems too complicated to be solved analytically• The students are able to present (graphically), discuss and analyze the results• The students gain experience in formulatind and carrying out a collaborative project		
Remarks: The number of students will be limited to 8.		
Workload: Total: 240 h 90 h preparation of presentations (self-study) 60 h preparation of written term papers (self-study) 60 h studying of course content (self-study) 90 h (attendance)		
Conditions: Knowledge of the programming language Python is expected on the level taught in the modul PHM-0041. Requirements to understand basic concepts in physics: Classical Mechanics (Newton, Lagrange), Electrodynamics, Thermodynamics and Quantum Mechanics.	Credit Requirements: Passing the module exam	
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Method Course: Theoretical Concepts and Simulation Mode of Instruction: lecture Language: English / German Contact Hours: 2		
Contents: Concepts of classical and quantum statistical physics: <ul style="list-style-type: none">• the meaning of sampling, random variables, ergodicity• equidistribution, pressure, temperature• path integrals, quantum statistics, enumeration, cluster algorithms		
Literature: <ol style="list-style-type: none">1. Werner Krauth, Algorithms and Computations (Oxford University Press, 2006)2. R. H. Landau, A Survey of Computational Physics (Princeton Univ. Press, 2010)

Examination

Method Course: Theoretical Concepts and Simulation

report / work period for assignment: 4 weeks, graded

Description:

The requirement for the credit points is based on a programming project carried out in a team of 2-3 students. The final report contains the formulation and a theoretical introduction into the problem, the numerical implementation, and the presentation of the results.

Module PHM-0258: Method course: Charge doping effects in semiconductors <i>Method course: Charge doping effects in semiconductors</i>	8 ECTS/LP
Version 1.0.0 (since SoSe21) Person responsible for module: Prof. Dr. István Kézsmárki Dr. Lilian Prodan, Dr. Somnath Ghara	
Contents: The goal of the method course is to make students familiar with the concept of controlling the type and the concentration of charge carriers in semiconductors, which is widely used approach in electronics and various fields of materials science. For this purpose, the current method course will be dealing with the preparation of various electron-doped and / or hole-doped narrow-gap semiconductors and investigation of the influence of charge doping on transport and magnetic properties. The following techniques will be involved: <ul style="list-style-type: none">• Synthesis of electron and hole doped narrow-gap semiconductors, such as Zn- and Ge-doped GaV4S8, in poly-crystalline forms using solid state reaction;• Refining the structure and checking phase purity by X-ray powder diffraction;• Resistivity and magneto-transport measurements;• Hall effect measurements to quantify carrier concentration;• Investigation of the doping-induced changes in the magnetic properties by magnetization measurements.	
Learning Outcomes / Competences: <ul style="list-style-type: none">• The students gain basic knowledge how to tailor the bulk properties of narrow-gap semiconductors via different doping techniques.• The students have detailed knowledge in performing XRD and magnetization experiments and know how to analyze the data.• The students acquire the competence to plan and perform Hall effect and magnetoresistance experiments and evaluate the obtained experimental results.• The students have the skill to distinguish between an n-type and p-type semiconductor.• The students know how to calculate the charge, mobility, and charge carrier density of a semiconductor using information obtained from the Hall effect experiments.	
Remarks: ELECTIVE COMPULSORY MODULES	
Workload: Total: 240 h	
Conditions: Recommended: basic knowledge in solid state physics and semiconductors;	Credit Requirements: Written report on the experiments (editing time 2 weeks)
Frequency: each semester	Recommended Semester:
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module Part of the Module: Method course: Charge doping effects in semiconductors (Practical Course) Mode of Instruction: internship Language: English Contact Hours: 4	

Contents:

The following techniques will be involved:

Module PHM-0285: Method Course: Computational Biophysics <i>Method Course: Computational Biophysics</i>	8 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. Dr. Nadine Schwierz-Neumann	
Contents:	
Life relies on the interactions of proteins, nucleic acids, lipids and other biomolecules. This course introduces computational methods to study the structure, dynamics and mechanics of these biomolecules. In the first part of the course, the physics behind biomolecular simulations is explained and the basic principles of classical and statistical mechanics are reviewed. In the second part, different simulation techniques are introduced including molecular dynamics simulations and Monte Carlo simulations. Subsequently the methods are applied to biological systems consisting of proteins, nucleic acids and lipids	
Learning Outcomes / Competences:	
<ul style="list-style-type: none"> Students develop an active understanding of the principles, the capacity and limitations of biomolecular simulations Students learn to solve typical biophysical problems analytically and numerically Students learn how to run and analyze computer simulations of biological matter Students learn to visualize, document and present their simulation results 	
Remarks:	
Number of students will be limited to 15.	
Workload:	
Total: 240 h 90 h exam preparation (self-study) 60 h studying of course content (self-study) 90 h (attendance)	
Conditions: Knowledge of classical mechanics on the bachelor level is expected.	Credit Requirements: Passing of the module exam
Frequency: every 3rd semester Ab SoSe2022	
Contact Hours: 6	Recommended Semester: from 1. Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
Part of the Module: Method Course: Computational Biophysics Mode of Instruction: lecture Language: English / German Contact Hours: 2	
Learning Outcome: <ul style="list-style-type: none"> Theoretical background of biomolecular simulations Computational methods to describe the structure, dynamics and mechanics of biomolecules 	

Contents:

- Introduction to classical mechanics in phase space
- Probability and information theory
- Connection to statistical mechanics
- Molecular dynamics basics
- Monte Carlo Simulations
- Forces and force fields in biomolecular systems
- Simulations in different ensembles
- Calculating macroscopic thermodynamic properties from simulations

Literature:

- Daniel M. Zuckerman, *Statistical Physics of Biomolecules* (2010 by Taylor and Francis Inc.)
- Ken Dill and Sarina Bromberg, *Molecular Driving Forces* (2012 by Taylor and Francis Inc; 2nd edition)
- Daan Frenkel and Berend Smit, *Understanding Molecular Simulation* (2002 by Elsevier, 2nd edition)

Part of the Module: Method Course: Computational Biophysics (Practical Course)

Mode of Instruction: internship

Language: English / German

Contact Hours: 4

Learning Outcome:

- Students learn to solve typical biophysical problems analytically and numerically
- Students learn to run and analyze computer simulations of biological matter
- Students learn to visualization, documentation and presentation of results

Contents:

The methods and tools discussed in the lecture will be applied to typical biophysical problems and biological systems. The students work individually or in small teams under supervision. The students present their solutions, document their simulations and summarize their results in a final report.

Examination

Method Course: Computational Biophysics

written exam / length of examination: 2 hours, graded

Module PHM-0287: Method Course: Spectroscopy of Organic Semiconductors <i>Method Course: Spectroscopy of Organic Semiconductors</i>	8 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. Dr. Wolfgang Brütting Dr. Alexander Hofmann	
Contents:	
<ul style="list-style-type: none"> Growth and characterisation of thin films (vapor deposition, spin coating, surface profiling, atomic force microscopy) Optical spectroscopy and photophysics (ellipsometry, transmission, steady-state and time-resolved photoluminescence, orientation anisotropy) Charge transport (space-charge limited current, field-effect mobility, doping) Light-emitting diodes (different emitter types, device efficiency measurement and simulation) Solar cells (different device architectures, power and quantum efficiency measurements) 	
Learning Outcomes / Competences:	
The students	
<ul style="list-style-type: none"> get familiar with the preparation of organic semiconductors as thin films and in devices and learn basic spectroscopic techniques to characterise them, acquire skills to analyse properties of the materials taking into account their specific features, and have the competence to comprehend and attend to current problems in the field of organic electronics. Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to critically interpret experimental results. 	
Workload:	
Total: 240 h	
Conditions: Basic knowledge of atomic and solid state physics, as well as elementary concepts of quantum physics.	Credit Requirements: Bestehen der Modulprüfung
Frequency: annually	
Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	
Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module	
Part of the Module: Method Course: Spectroscopy of Organic Semiconductors Mode of Instruction: lecture Language: English / German Contact Hours: 2	
Lehr-/Lernmethoden: The basics for each topic will be taught in class, e.g. using black board and beamer presentation.	
Literature: <ul style="list-style-type: none"> M. Schwoerer, H. Ch. Wolf: Organic Molecular Solids (Wiley-VCH) A. Köhler, H. Bässler: Electronic Processes in Organic Semiconductors (Wiley-VCH) S.R. Forrest: Organic Electronics (Oxford Univ. Press) 	
Assigned Courses:	
Method Course: Spectroscopy of Organic Semiconductors (lecture)	

Part of the Module: Method Course: Spectroscopy of Organic Semiconductors (Practical Course)

Mode of Instruction: internship

Language: English / German

Contact Hours: 4

Lehr-/Lernmethoden:

After teaching in class, the students will go to the lab to get practical experience with each topic.

Examination

Method Course: Spectroscopy of Organic Semiconductors

report, graded

Module PHM-0297: Method Course: Methods in Bioanalytics <i>Method Course: Methods in Bioanalytics</i>	8 ECTS/LP
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. Janina Bahnemann	
Contents:	
<ul style="list-style-type: none"> - Basic concepts of instrumental analytics, sensor technology, validation, quality assurance - Biological basics for sensor design and sample components - Biological markers, biomaterials and targets: bioreceptors: antibodies, enzymes, aptamers, cells, nanoparticles - Sensor principles / transducers: optical, thermal, electrochemical, electromechanical, colorimetric - Sensor materials (e.g., silicon, gold, plastics, polymers) - Immobilization of bioreceptors on sensor materials - Lateral flow assays, Point-of-Care diagnostics - Carbohydrate and lipid analysis: Chromatographic methods (HPLC, GC, DC, MS) - Amino acid analytics: HPLC, fluorescence spectroscopy - Nucleic acid analytics: PCR method, sequencing, electrophoresis, microarrays - Protein analytics: Chromatography, electrophoresis, spectroscopy, Bradford assay - Cell analytics: Flow cytometry and microscopy - Concepts and materials for sensor development and optimization: e.g., Microfluidics, additive manufacturing, nanoporous materials, nanoparticles, amplifiers 	
Learning Outcomes / Competences:	
<ul style="list-style-type: none"> • Students will be able to use acquired analytical expertise to adequately describe and correlate basic principles of bioanalysis and their applications. • Students will be able to transfer acquired knowledge from the lecture to practical applications in the experimental practical course. • Students will demonstrate self-competence of work organization as well as social competence by working in small groups. • Students will learn to identify proteins using various analytical methods, to set up biosensors for measuring glucose concentrations, and to scientifically evaluate, comprehensibly record in writing, and present the practical results. 	
Remarks: ELECTIVE COMPULSORY MODULE Number of students will be limited to 9.	
Workload: Total: 240 h

Module PHM-0298: Method course: From macroscopic to microscopic ferroic properties <i>Method course: From macroscopic to microscopic ferroic properties</i>	8 ECTS/LP	
Version 1.0.0 (since WS22/23) Person responsible for module: Prof. Dr. István Kézsmárki		
Contents:		
Within this course, the students will learn the basic concepts of ferroic properties, e.g. ferroelectricity and ferromagnetism, which play a key role in materials science and engineering, at cryogenic temperatures. This method course will teach the students to understand and perform experiments on ferroic materials first, on a macroscopic scale and, after having a fundamental understanding, microscopic measurements. Therefore, the students will be taught in preparing single crystals, planning complex measurement procedures, and evaluating the measured data.		
Magnetic Properties will be investigated via:		
<ul style="list-style-type: none"> • Magnetization measurements • Susceptibility measurements • Magnetic force microscopy (MFM) 		
Electric Properties will be investigated via:		
<ul style="list-style-type: none"> • Linear and non-linear dielectric spectroscopy • SEM / EDX • Polarization measurements • Conductive atomic force microscopy (cAFM) / piezo force microscopy (PFM) 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • fundamental knowledge of properties in electric and magnetic materials • instruction in experimental methods for investigation of ferroic properties of condensed matter • perform experiments at cryogenic temperatures • trained in planning and performing complex experiments • learn to evaluate and analyze the collected data • combining knowledge of macroscopic measurements to understand microscopic data to fully understand electric and magnetic properties 		
Remarks:

Contents: <p>Die Studierenden trainieren in diesem Modul primär Fähigkeiten für die soziale Interaktion, die unerlässlich für ihre künftige Berufsfähigkeit sind, denn diese fordert eine überzeugende Persönlichkeit des Einzelnen und eine einwandfreie und zielgerichtete Interaktion im Team. Zudem bildet die interdisziplinäre Zusammensetzung der Teilnehmer aus unterschiedlichen Studienrichtungen den typischen Wirkungskreise von Wirtschaftsingenieuren ab.</p> <p>Detailbeschreibungen zu Kursen und Anmeldverfahren befinden sich auf https://www.uni-augsburg.de/de/studium/zusatzqualifikationen/profilbildung/#Anker_skK bzw. im digicampus.</p>		
Learning Outcomes / Competences: <p>Die Studierenden verstehen die Kommunikations-, Dialog- und Teamprozesse in Bezug auf Motivation, Effektivität. Sie erkennen die Entstehung, Dynamik, Lösung und Prävention von Konflikten, können Moderations- Und Präsentationstechniken und ihre Fertigkeit zur Selbstreflexion anwenden, sie beherrschen die Regeln bei der Teamarbeit, bei Besprechungen bis hin zur Führung von Teams oder sie verstehen den Nutzen von gesellschaftlichem Engagement und nachhaltigem Wirtschaften für sich, für Unternehmen und für die Gesellschaft und sind befähigt nachhaltige Konzepte zu entwickeln.</p> <p>Die interdisziplinäre Herangehensweise an eine Problemstellung wird durch die heterogene Zusammensetzung der Kleingruppen in den Kursen trainiert, durch praktische Übungen in den Kursen gefestigt und durch Selbstreflexion und Feedbackmethoden verinnerlicht, um den Transfer auf neue Situationen zu gewährleisten.</p>		
Remarks: <p>Anmeldungspflicht: Für die Teilnahme an den Kursen ist eine Anmeldung über digicampus erforderlich.</p> <p>Anmeldephase: Januar (für das folgende SS) bzw. Juli (für das folgende WS) - genaue Termine siehe digicampus.</p> <p>Die Kurse finden größtenteils ab Mitte März bis letzten Sa* im April (SS) bzw. ab Mitte Sep. bis letzten Sa* im Okt. statt. (*vor Vorlesungsbeginn).</p> <p>Die Kurse haben eine limitierte Teilnehmerzahl pro Semester.</p> <p>Für das Modul D: Softskills können die verschiedenen Module ZCS-610x "Softskill-Kurstage <Kom/Soz/MethKompetenz>" und ZCS-6601 "Softskill-Kurse <Kom/Soz/MethKompetenz>" variabel kombiniert werden sowie mit Angeboten der vhb-Kurse und Auslandsleistungen ergänzt werden, um die 6 ECTS zu erreichen.</p> <p>Es empfiehlt sich ab dem 3. Semester jedes Semester einen Kurs zu belegen oder in einem Semester einen der Kompaktkurse.</p>		
Workload: <p>Total: 60 h 20 h seminar (attendance) 20 h (self-study) 20 h studying of course content using literature (self-study)</p>		
Conditions: none	Credit Requirements: aktive Übungsteilnahme im Kurs plus Prüfung mit min. Note 4,0 (bestanden).	
Frequency: each semester	Recommended Semester: from 3.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 1	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Softskill-Kurse - Sozialkompetenz
Mode of Instruction: course
Language: German
Contact Hours: 2
ECTS Credits: 2.0
Contents: Themen, die (un)regelmäßig angeboten werden sind: <ul style="list-style-type: none">- Konfliktmanagement- Moderation & Teamleitung- Emotionale Intelligenz- Teams führen- Führung erleben- integrale Zukunftskompetenzen sowie <ul style="list-style-type: none">- Strategische Gesprächsführung- erfolgreich Debattieren- Changemanagement- Innovationen entwickeln- Projektmanagement- nachhaltig Wirtschaften / Corp. Responsibility Weitere Informationen finden sich unter https://www.uni-augsburg.de/de/studium/zusatzqualifikationen/profilbildung/ bzw. im digicampus.
Lehr-/Lernmethoden: Vortrag / Präsentation sowie interaktive Übungen - Medien Beamer / Flipchart / Pinwand, interaktive Übungen, Gruppenarbeit, Diskussion, Reflexion
Literature: wird im Kurs bz. in die Kursbeschreibungen angebenen bzw. vorab kommuniziert.
Assigned Courses: Kurs Changemanagement (course) Kurs Führung erleben (course) Kurs Konfliktmanagement (course) Kurs Leadership experience (English) (course) Kurs Teams führen (course) Kurs Zukunftskompetenz: Transformationsprozesse gestalten (course)

Examination
Kombinierte Prüfung - Softskill-Kurse part-module exam, Praxisleistung (Referat/Präsentation/Projektarbeit - 10 min im Kurs) und eine schriftliche/ mündliche Kurz-/Prüfungsleistung (mündliche Prüfung/ Klausur/ Seminararbeit - 20 min) am Ende bzw. direkt nach dem Kurs abzuleisten / length of examination: 30 minutes, graded

Module ZCS-6603: Softskill-Kurse - Methodenkompetenz	2 ECTS/LP	
Version 1.1.0 (since WS16/17) Person responsible for module: Prof. Dr. Andreas Rathgeber Claudia Lange-Hetmann		
Contents: <p>Die Studierenden erwerben in den Softskill-Kursen, die diesem Modul zugeordnet sind primär methodische Fähigkeiten, die unerlässlich für ihre künftige Berufsfähigkeit sind.</p> <p>Zudem bildet die interdisziplinäre Zusammensetzung der Teilnehmer aus unterschiedlichen Fachrichtungen den typischen Wirkungskreise von Wirtschaftsingenieuren ab.</p> <p>Detailbeschreibungen zu Kursen und Anmeldverfahren befinden sich auf https://www.uni-augsburg.de/de/studium/zusatzqualifikationen/profilbildung/#Anker_skK bzw. im digicampus.</p>		
Learning Outcomes / Competences: <p>Die Studierenden verstehen grundlegende Konzepte des Projektmanagements und können die Grundlagen der Motivationspsychologie und zentrale Führungstechniken zur Erreichung des Projekterfolgs anwenden. Oder sie können grundlegende Strategien und Methoden für die Entwicklung und Absicherung einer Unternehmensführung anwenden oder sie können Kreativitätstechniken anwenden, verstehen Probleme zu analysieren und können konstruktiv im Team eine Lösung erarbeiten und kompetenz kommunizieren. Sie beherrschen die Regeln bei Besprechungen und Moderationstechniken und können ihre Fertigkeit zur Selbstreflexion anwenden und auf neue Aufgabenstellungen transferieren.</p> <p>Die interdisziplinäre Herangehensweise an eine Problemstellung wird durch die heterogene Zusammensetzung der Kleingruppen in den Kursen trainiert, durch praktische Übungen in den Kursen gefestigt und durch Selbstreflexion und Feedbackmethoden verinnerlicht, um den Transfer auf neue Situationen zu gewährleisten.</p>		
Remarks: <p>Anmeldungspflicht: Für die Teilnahme an den Kursen ist eine Anmeldung über das VV (Theoretische Informatik) erforderlich. Anmeldephase: bzw. Juli .</p> <p>Die Kurse haben eine limitierte Teilnehmerzahl pro Semester.</p> <p>Für das Modul D: Softskills können die verschiedenen Module ZCS-610x "Softskill-Kurstage <Kom/Soz/MethKompetenz>" und ZCS-6601 "Softskill-Kurse <Kom/Soz/MethKompetenz>" variabel kombiniert werden sowie mit Angeboten der vhb-Kurse und Auslandsleistungen ergänzt werden, um die 6 ECTS zu erreichen.</p> <p>Es empfiehlt sich ab dem 3. Semester jedes Semester einen Kurs zu belegen oder in einem Semester einen der Kompaktkurse.</p>		
Workload: <p>Total: 60 h</p> <p>20 h seminar (attendance)</p> <p>10 h studying of course content using literature (self-study)</p> <p>10 h studying of course content using provided materials (self-study)</p> <p>20 h (self-study)</p>		
Conditions: none	Credit Requirements: aktive Übungsteilnahme im Kurs plus Prüfung mit min. Note 4,0 (bestanden).	
Frequency: each semester	Recommended Semester: from 3.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 1	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module
Part of the Module: Softskill-Kurse - Methodenkompetenz
Language: German / English
Contents: Kurse die (un)regelmäßig angeboten werden: - Zeit-/Selbstmanagement - Projektmanagement (dt. / engl.) - Unternehmerisches Denken sowie - Changemanagement - Innovationen entwickeln - nachhaltig Wirtschaften / Corp. Responsibility Weitere Informationen finden sich im digicampus.
Literature: wird im Kurs bz. in die Kursbeschreibungen angegebenen bzw. vorab kommuniziert.
Assigned Courses: Kurs (Study-) Work-Life Balance (course) Kurs Finding your Passion (course) Kurs Innovationen entwickeln (course) Kurs Nachhaltiges Wirtschaften (course) Kurs Project management (English) (course) Kurs Projektmanagement (course) Kurs Students for Sustainability (course)

Examination
Kombinierte Prüfung Softskill-Kurse
part-module exam, pro Teilmodul ist - je eine Praxisleistung (Referat/Präsentation/Projektarbeit - 10 min im Kurs) und je eine schriftliche/mündliche Prüfungsleistung (mündliche Kurz-/Prüfung/ Klausur/ Seminararbeit - 20 min) am Ende bzw. direkt nach dem Kurs abzuleisten / length of examination: 30 minutes, graded

Module PHM-0283: Masterthesis <i>Masterthesis</i>	26 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. Dr. Ferdinand Haider	
Contents: According to chosen topic	
Learning Outcomes / Competences: Students work in a research group on an advanced scientific problem learn to solve daily experimental or theoretical problems learn to perform search for actual scientific literature, to review it critically and to properly cite it in the written version have to integrate in a research group, interact with other members of the group, present their actual results in and outside the group	
Remarks: COMPULSORY MODULE	
Workload: Total: 780 h 520 h (self-study) 260 h studying of course content using provided materials (self-study)	
Conditions: The Master's thesis can be started at the earliest after the successful completion of the modules from module groups 1 (or FMI-First Year) and 7 and the acquisition of at least 78 credit points. Recommended: according to the respective advisor	Credit Requirements: written thesis
Frequency: each semester	Recommended Semester: from 4.
	Minimal Duration of the Module: 1 semester[s]
Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module	
Part of the Module: Masterthesis	
Language: English / German	
Learning Outcome: see description of module	
Contents: see description of module	
Examination	
Masterthesis Master's thesis, graded	

Module PHM-0284: Colloquium <i>Colloquium</i>	4 ECTS/LP	
Version 1.0.0 (since SoSe22) Person responsible for module: Prof. Dr. Ferdinand Haider		
Contents: According to the respective Masterthesis		
Learning Outcomes / Competences: Prepare a scientific presentation to the thesis supervisors and, if desired, to a wider audience learn to setup a presentation reflecting the major results of the thesis learn to properly reply to questions regarding the presentation and the background of the master thesis		
Remarks: COMPULSORY MODULE		
Workload: Total: 120 h 40 h studying of course content using provided materials (self-study) 80 h (self-study)		
Conditions: submission of the masterthesis		
Frequency: each semester Siehe Bemerkungen	Recommended Semester: from 4.	Minimal Duration of the Module: 1 semester[s]
	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Colloquium		
Language: English		
Learning Outcome: see description of module		
Contents: see description of module		
Assigned Courses:		
Masterarbeits-Seminar (seminar)		
Examination Colloquium oral exam, approx. 30 to 40-minute presentation of the contents of the master's thesis followed by a discussion, graded		

Module PHM-0209: Functional Materials (International) – first year (Institut National Polytechnique de Grenoble) <i>Functional Materials (International) – first year (Institut National Polytechnique de Grenoble)</i>	62 ECTS/LP
Version 1.0.0 (since WS16/17) Person responsible for module: Prof. Dr. Ferdinand Haider	
Conditions: studies at an international partner institution	Credit Requirements: written exam, oral exam, report, etc.
Frequency: each semester	Recommended Semester:
Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module Part of the Module: Functional Materials (International) – (Foreign Institution) Language: English	
Examination Functional Materials (International) – (Foreign Institution) module exam, written exam, oral exam, report, etc., graded	

Module MRM-0025: Fiber Reinforced Polymers for Engineers <i>Faserverbundkunststoffe - Produktion und Anwendung</i>	6 ECTS/LP	
Version 1.0.0 (since WS15/16) Person responsible for module: Prof. Dr.-Ing. Michael Kupke		
Learning Outcomes / Competences:		
Die Studierenden - kennen die Vor- und Nachteile von Faserverbundwerkstoffen in Herstellung und Anwendung - haben ein Verständnis über faserverbundgerechte Bauweisen - kennen das Prinzip der Bauweisenbewertung für das Produkt		
Remarks: Ansprechpartnerin: Prof. Dr.-Ing. Michael Kupke, Tobias Karrasch (tobias.karrasch@mrm.uni-augsburg.de)		
Workload: Total: 180 h		
Conditions: none	Credit Requirements: Schriftliche Prüfung	
Frequency: each semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 2	Repeat Exams Permitted: any	
Parts of the Module		
Part of the Module: Faserverbundkunststoffe für Ingenieure Mode of Instruction: lecture Lecturers: Prof. Dr.-Ing. Michael Kupke Language: German Contact Hours: 2		
Contents: 1. Grundlagen 2. Herstellung 3. Produktion 4. Anwendung		
Lehr-/Lernmethoden: Tafelanschrift und Beamerpräsentation		
Literature: wird in der Vorlesung bekannt gegeben		
Assigned Courses: Faserverbundkunststoffe – Produktion und Anwendung (Faserverbundkunststoffe für Ing.) (lecture)		
Examination Faserverbundkunststoffe für Ingenieure written exam, Schriftliche Prüfung, graded		

Module MRM-0126: Ceramic Matrix Composites <i>Keramische Faserverbundwerkstoffe</i>	6 ECTS/LP
Version 3.0.0 (since WS21/22)	
Person responsible for module: Prof. Dr.-Ing. Dietmar Koch	
Contents: <ul style="list-style-type: none"> • Introduction in ceramic matrix composites • Basics of processing of technical ceramics • Processing chain of ceramic matrix composites (CMC) from raw materials to product • Processing and properties of ceramic fibers • Principal mechanisms of reinforcement in CMC • Properties of CMC • Application of CMC 	
Learning Outcomes / Competences: <ul style="list-style-type: none"> • The students know the basic concepts of mechanical behavior of ceramic matrix composites • The students have the competence to explain processing of ceramic fibers and ceramic matrix composites and describe their specific properties • The students know the Weibull statistics which describe the fiber strength distribution • The students know how to describe mechanical interactions between fiber and matrix • The students get the knowledge of application of ceramic matrix composites and are able to choose the according material for specific application. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content 	
Workload: Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)	
Conditions: Recommended: basic knowledge of materials	Credit Requirements: Passing the module exam
Frequency: each winter semester	
Contact Hours: 4	Recommended Semester: from 1. Minimal Duration of the Module: 1 semester[s]
Parts of the Module	
Part of the Module: Keramische Faserverbundwerkstoffe Mode of Instruction: lecture Language: English Contact Hours: 3	
Learning Outcome: see description of module	
Contents: see description of module

Module MRM-0136: Mechanical Characterization of Materials <i>Mechanical Characterization of Materials</i>	6 ECTS/LP	
Version 1.1.0 (since SoSe21) Person responsible for module: Prof. Dr. Markus Sause		
Contents:		
The following topics are presented:		
<ul style="list-style-type: none"> • Introduction to material characterization • Linear material behaviour • Non-linear material behaviour • Material failure • Measurement technologies • Tensile testing • Compression testing • Shear testing • Other static testing concepts • Fracture mechanics • Assembly testing • Surface mechanics • Creep testing • Fatigue testing • High-Velocity testing • Component testing 		
Learning Outcomes / Competences:		
The students:		
<ul style="list-style-type: none"> • Acquire knowledge in the field of materials testing and evaluation of materials. • Are introduced to important concepts in measurement techniques, and material models. • Are able to independently acquire further knowledge of the scientific topic using various forms of information. 		
Workload:		
Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 60 h lecture and exercise course (attendance)		
Conditions: None	Credit Requirements: Passing the module exam	
Frequency: each summer semester		
Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]	
Contact Hours: 4		
Repeat Exams Permitted: according to the examination regulations of the study program

Examination

Physics and Technology of Semiconductor Devices

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Physics and Technology of Semiconductor Devices

Module PHM-0049: Nanostructures / Nanophysics <i>Nanostructures / Nanophysics</i>	6 ECTS/LP	
Version 1.2.0 (since WS09/10) Person responsible for module: Prof. Dr. István Kézsmárki		
Contents:		
<ol style="list-style-type: none"> 1. Semiconductor quantum wells, wires and dots, low dimensional electron systems 2. Magnetotransport in low-dimensional systems, Quantum-Hall-Effect, Quantized conductance 3. Optical properties of nanostructures and their application in modern optoelectronic devices, Nanophotonics 4. Fabrication and detection techniques of nanostructures 5. Ferroic properties of nanostructures (Ferroelectricity, Magnetism, Multiferroicity) 6. Nano-bio-magnetism (magnetotactic bacteria, magnetoreception, malaria) 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • The students gain basic knowledge of the fundamental concepts in modern nanoscale science. • The students have detailed knowledge of low-dimensional semiconductor structures and how these systems can be applied for novel functional devices for high-frequency electronics and optoelectronics • The students gain competence in selecting different fabrication and characterization approaches for specific nanostructures. • The students are able apply these concepts to tackle present problems in nanophysics. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload:		
Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study)		
Conditions: recommended prerequisites: basic knowledge in solid-state physics and quantum mechanics.		
Frequency: each summer semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Assigned Courses:

Solid State Spectroscopy with Synchrotron Radiation and Neutrons (lecture)

Part of the Module: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (Tutorial)

Mode of Instruction: exercise course

Language: English

Contact Hours: 1

Assigned Courses:

Solid State Spectroscopy with Synchrotron Radiation and Neutrons (Tutorial) (exercise course)

Examination

Solid State Spectroscopy with Synchrotron Radiation and Neutrons

oral exam / length of examination: 30 minutes, graded

Examination Prerequisites:

Solid State Spectroscopy with Synchrotron Radiation and Neutrons

Module PHM-0056: Ion-Solid Interaction <i>Ion-Solid Interaction</i>	6 ECTS/LP	
Version 1.0.0 (since WS09/10) Person responsible for module: apl. Prof. Dr. Helmut Karl		
Contents: <ul style="list-style-type: none"> • Introduction (areas of scientific and technological application, principles) • Fundamentals of atomic collision processes (scattering, cross-sections, energy loss models, potentials in binary collision models) • Ion-induced modification of solids (integrated circuit fabrication with emphasis on ion induced phenomena, ion implantation, radiation damage, ion milling and etching (RIE), sputtering, erosion, deposition) • Transport phenomena • Analysis with ion beams 		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none"> • know the physical principles and the basical mechanisms of the interaction between particles and solid state bodies in the energy range of eV to MeV, • are able to choose adequate physical models for specific technological and scientific applications, and • have the competence to work extensively autonomous on problems concerning the interaction between ions and solid state bodies. • Integrated acquirement of soft skills. 		
Workload: Total: 180 h 20 h studying of course content using literarture (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
Conditions: Basic Courses in Physics I–IV, Solid State Physics, Nuclear Physics		
Frequency: annually	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Ion-Solid Interaction		
Mode of Instruction: lecture		
Language: English		
Contact Hours: 3		
Learning Outcome: see module description		
Contents: see module description

Examination

Ion-Solid Interaction

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Ion-Solid Interaction

Module PHM-0057: Physics of Thin Films <i>Physics of Thin Films</i>	6 ECTS/LP	
Version 1.6.0 (since WS09/10) Person responsible for module: PD Dr. German Hammerl		
Contents:		
<ul style="list-style-type: none"> Thin film growth: basics, thermodynamic considerations, surface kinetics, growth mechanisms Thin film growth techniques: vacuum technology, physical vapor deposition, chemical vapor deposition Analysis and characterization of thin films: in-situ methods, ex-situ methods, direct methods Properties and applications of thin films 		
Learning Outcomes / Competences:		
<p>The students:</p> <ul style="list-style-type: none"> know a broad spectrum of methods of thin film technology and material properties and applications of thin films, have the competence to deal with current problems in the field of thin film technology largely autonomous, are able to choose the right substrates and thin film materials for epitaxial thin film growth to achieve desired application conditions, aquire skills of combining the various technologies for growing thin layers with respect to their properties and applications, and aquire scientific soft skills to search for scientific literature, understand technical english, work with literature in the field of thin films, interpret experimental results. 		
Workload:		
<p>Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study)</p>		
Conditions:		
none		
Frequency: every 3rd semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module

Physics of Thin Films

Module PHM-0058: Organic Semiconductors <i>Organic Semiconductors</i>	6 ECTS/LP	
Version 1.6.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Brütting		
Contents: Basic concepts and applications of organic semiconductors		
Introduction <ul style="list-style-type: none">• Materials and preparation• Structural properties• Electronic structure• Optical and electrical properties		
Devices and Applications <ul style="list-style-type: none">• Organic metals• Light-emitting diodes• Solar cells• Field-effect transistors		
Learning Outcomes / Competences: The students: <ul style="list-style-type: none">• know the basic structural and electronic properties of organic semiconductors as well as the essential function of organic semiconductor devices,• have acquired skills for the classification of the materials taking into account their specific features in the functioning of components,• and have the competence to comprehend and attend to current problems in the field of organic electronics.• Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to interpret experimental results		
Workload: Total: 180 h 60 h lecture and exercise course (attendance) 40 h studying of course content through exercises / case studies (self-study) 40 h studying of course content using provided materials (self-study) 40 h studying of course content using literature (self-study)		
Conditions: It is strongly recommended to complete the module solid-state physics first. In addition, knowledge of molecular physics is desired.		
Frequency: Sommersemester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 5	Repeat Exams Permitted: according to the examination regulations of the study program

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Magnetism

Module PHM-0060: Low Temperature Physics <i>Low Temperature Physics</i>	6 ECTS/LP	
Version 1.2.0 (since WS09/10) Person responsible for module: Prof. Dr. Philipp Gegenwart		
Contents:		
<ul style="list-style-type: none"> • Introduction • Properties of matter at low temperatures • Cryoliquids and superfluidity • Cryogenic engineering • Thermometry • Quantum transport, criticality and entanglement in matter 		
Learning Outcomes / Competences:		
<p>The students:</p> <ul style="list-style-type: none"> • know the basic properties of matter at low temperatures and the corresponding experimental techniques, • have acquired the theoretical knowledge to perform low-temperature measurements, • and know how to experimentally investigate current problems in low-temperature physics. 		
Workload:		
<p>Total: 180 h</p> <p>20 h studying of course content using provided materials (self-study)</p> <p>20 h studying of course content using literature (self-study)</p> <p>60 h lecture and exercise course (attendance)</p> <p>80 h studying of course content through exercises / case studies (self-study)</p>		
Conditions:		
Physik IV - Solid-state physics		
Frequency: each winter semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Low Temperature Physics Mode of Instruction: lecture Language: English Contact Hours: 3		
Learning Outcome: see module description		

Contents:

- Introduction (temperature scale, history of low temperature physics)
- Properties of matter at low temperatures (specific heat, thermal expansion, electrical resistance, thermal conductivity)
- Cryoliquids and superfluidity (nitrogen, hydrogen, 4-He and 3-He: phase diagrams, superfluidity)
- Cryogenic engineering (liquefaction of gases, helium cryostats, dilution refrigerator, adiabatic demagnetization, further techniques)
- Thermometry (primary and secondary thermometers at different temperature regimes)
- Quantum Matter (quantum Transport, Quantum phase transitions, Quantum spin liquids)

Literature:

written exam / length of examination: 90 minutes, graded

Examination Prerequisites:

Modern Metallic Materials

Module PHM-0193: Plasma Material Interaction <i>Plasma-Material-Wechselwirkung</i>	6 ECTS/LP	
Version 2.4.0 (since WS17/18) Person responsible for module: apl. Prof. Dr.-Ing. Ursel Fantz Dr. Armin Manhard		
Contents: <ul style="list-style-type: none"> • Fundamentals of plasma material interactions (winter term) • High heat load components in nuclear fusion devices (summer term) 		
Learning Outcomes / Competences: <ul style="list-style-type: none"> • Knowledge: The students know the fundamental plasma material interaction processes and their implication for nuclear fusion research in light of the technological boundary conditions and challenges. • Skills: The students are proficient in a differentiated analysis of complex systems, based on learning from examples of power exhaust in fusion devices. • Competencies: The students are competent in elaborating current topics of plasma material interaction. • Integrated achievement of key qualifications: Acquisition of interdisciplinary knowledge, independent work with English literature, abstraction and approximation of complex processes using numerical models, application-oriented thinking and ability to contemplate about experimental results. 		
Remarks: <ul style="list-style-type: none"> • The two lectures of this module can be followed in an arbitrary order. Thus, the module can be started at a summer or winter term. • The oral exam (30 min, 6 CP) covers both lectures of the module, i.e. 'Fundamentals of plasma material interactions' (winter term) and 'High heat load components in nuclear fusion devices' (summer term). It can be taken at any time (registration in Studis necessary during the registration period, for an exam appointment contact the lecturer). 		
Workload: Total: 180 h 60 h studying of course content using provided materials (self-study) 60 h studying of course content using literature (self-study) 60 h lecture (attendance)		
Conditions: recommended: module "Plasmaphysik und Fusionsforschung"	Credit Requirements: general examination for entire module	
Frequency: each semester	Recommended Semester: from 2.	Minimal Duration of the Module: 2 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Fundamentals of plasma material interactions Mode of Instruction: lecture Language: English / German Frequency: each winter semester Contact Hours: 2		
Learning Outcome: see description of module		

Contents:

Fundamental plasma boundary physics, erosion processes: physical sputtering, chemical erosion, radiation induced sublimation, arcs, experimental observation of surface processes in plasmas, methods for characterizing surfaces, coating techniques, hydrogen retention, surface modification by plasmas.

Literature:

- P. Stangeby: The plasma boundary of magnetic fusion devices (IOP, 2000)
- R. Clark, D. Reiter (Eds.): Nuclear Fusion Research, Understanding Plasma-Surface Interactions (Springer, 2005)

- M. Turnyanskiy et al.: European roadmap to the realization of fusion energy: Mission for solution on heat-exhaust systems (Fusion Engineering and Design, 2015)

Assigned Courses:

Fundamentals of plasma material interactions (lecture)

Part of the Module: High heat load components in nuclear fusion devices

Mode of Instruction: lecture

Language: English / German

Frequency: each summer semester

Contact Hours: 2

Learning Outcome:

see description of module

Contents:

Interdependency of material choices and fusion performance, material choices and technologies for power exhaust in a fusion power plant, migration of materials in a fusion plasma, diagnostics for plasma material interaction in fusion devices (in situ and post mortem), numerical methods for studying plasma material interaction.

Literature:

- P. Stangeby: The plasma boundary of magnetic fusion devices (IOP, 2000)
- R. Clark, D. Reiter (Eds.): Nuclear Fusion Research, Understanding Plasma-Surface Interactions (Springer, 2005)

Examination

Plasma Material Interaction

oral exam, One exam on both lectures of the module / length of examination: 30 minutes, graded

Test Frequency:

each semester

Description:

The exam can be taken at any time (registration in Studis necessary during the registration period, for an exam appointment contact the lecturer).

Module PHM-0203: Physics of Cells <i>Physics of Cells</i>	6 ECTS/LP	
Version 1.3.0 (since SoSe22) Person responsible for module: Dr. Christoph Westerhausen		
Contents:		
<ul style="list-style-type: none"> • Physical principles in Biology • Cell components and their material properties: cell membrane, organelles, cytoskeleton • Thermodynamics of proteins and biological membranes • Physical methods and techniques for studying cells • Cell adhesion – interplay of specific, universal and elastic forces • Tensile strength and elasticity of tissue - macromolecules of the extra cellular matrix • Micro mechanics and properties of the cell as a biomaterial • Cell adhesion • Cell migration • Cell actuation, cell-computer-communication, and cell stimulation 		
Learning Outcomes / Competences:		
<p>The students</p> <ul style="list-style-type: none"> • know basic physical properties of human cells, as building blocks of living organisms and their material properties. • know the basic functionality of mechanical and optical methods to study living cells • know physical descriptions of fundamental biological processes and properties of biomaterials. • are able to express biophysical questions and define model systems to answer these questions. <p>The students improve the key competences:</p> <ul style="list-style-type: none"> • self-dependent working with English specialist literature. • processing of experimental data. • interdisciplinary thinking and working. 		
Workload:		
60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
Conditions: Mechanics, Thermodynamics	Credit Requirements: Bestehen der Modulprüfung	
Frequency: each winter semester		
Frequency: each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module

Module PHM-0252: Optical Excitations in Materials <i>Optical Excitations in Materials</i>	6 ECTS/LP	
Version 1.9.0 (since SoSe20) Person responsible for module: Prof. Dr. Joachim Deisenhofer		
Contents:		
<p>1. Classical Light-Matter Interaction in Solids:</p> <ul style="list-style-type: none"> • Introduction: Typical Optical Response of Metals and Semiconductors • Classical electromagnetic wave propagation in linear optical media (Maxwell Equations, refractive index, reflection, transmission, absorption) • Anisotropic media, birefringence, longitudinal solutions • Classical Drude-Lorentz oscillator model • Spectroscopic techniques: Fourier-Transform-Spectroscopy, Time-domain Spectroscopy, Ellipsometry <p>2. Quantum Aspects of Light-Matter interaction</p> <ul style="list-style-type: none"> • qm approach to absorption and emission: Lorentzian lineshape, Fermi's Golden Rule • Electric-dipole and magnetic-dipole approximation • Rabi-oscillations and the need for quantum optical approaches • A glimpse of non-linear optics <p>3. Excitations in different material classes</p> <ul style="list-style-type: none"> • Optical properties of semiconductors/insulators, molecular materials, metals • Absorption and Luminescence, excitons, luminescence centers • Optoelectronics, detectors, light emitting devices • Quantum confined structures: tuning of absorption and emission 		
Learning Outcomes / Competences:		
<ul style="list-style-type: none"> • The students gain basic knowledge of the fundamental concepts of light-matter interaction in solids. • The students have detailed knowledge of classical models of light-propagation and absorption and get the competence to choose adequate spectroscopic techniques for measuring the optical properties of different material classes. • The students have a basic understanding of quantum aspects of optical processes in different materials. • The students are able apply these concepts to understand and analyse optical properties of different materials. • The students acquire scientific skills to search for scientific literature and to evaluate scientific content. 		
Workload:		
<p>Total: 180 h</p> <p>20 h studying of course content using literature (self-study)</p> <p>80 h studying of course content through exercises / case studies (self-study)</p> <p>20 h studying of course content using provided materials (self-study)</p> <p>60 h lecture and exercise course (attendance)</p>		
Conditions:		
Basic knowledge of classical electrodynamics, atomic and solid state physics.		
Frequency: each semester	Recommended Semester: from 2.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program	

Parts of the Module

Part of the Module: Optical Excitations in Materials

Optical Excitations in Materials

written exam / length of examination: 90 minutes, graded

Module PHM-0253: Dielectric Materials <i>Dielectric Materials</i>	6 ECTS/LP	
Version 2.0.0 (since SoSe23) Person responsible for module: PD Dr. Peter Lunkenheimer		
Contents:		
<ul style="list-style-type: none"> • Experimental techniques: quantities, broadband dielectric spectroscopy, nonlinear and polarization measurements • Dynamic processes in dielectric materials: relaxation processes, phenomenological models • Dielectric properties of disordered matter: liquids, glasses, plastic crystals • Charge transport: hopping conductivity, universal dielectric response • Ionic conductivity: conductivity mechanism, dielectric properties, advanced electrolytes for energy-storage devices • Maxwell-Wagner relaxations: equivalent-circuits, applications (supercapacitors), colossal-dielectric-constant materials • Electroceramics: Materials, Properties (relaxor ferroelectric, ferroelectric, antiferroelectric and multiferroic), Applications 		
Learning Outcomes / Competences:		
<p>Students know the fundamentals of electromagnetic wave propagation and have a sound background for a broad spectrum of dielectric phenomena. They are able to analyze materials requirements and to interpret dielectric spectra in a broad frequency range. They have the competence to select materials for different kinds of applications and to critically assess experimental results on dielectric properties.</p>		
Remarks:		
Elective compulsory module		
Workload:		
<p>Total: 180 h</p> <p>20 h studying of course content using provided materials (self-study)</p> <p>20 h studying of course content using literature (self-study)</p> <p>80 h studying of course content through exercises / case studies (self-study)</p> <p>60 h lecture and exercise course (attendance)</p>		
Conditions:

Übung zu Moderne Diffraktionsmethoden in den Materialwissenschaften (exercise course)

Examination

Moderne Diffraktionsmethoden in den Materialwissenschaften

written exam / length of examination: 90 minutes, graded

Module PHM-0301: Supramolecules and molecular design in materials science <i>Supramoleküle und molekulares Design in den Materialwissenschaften</i>	6 ECTS/LP
Version 1.0.0 (since SoSe23) Person responsible for module: Dr. Hana Bunzen	
Contents:	
<ul style="list-style-type: none"> An introduction and historical overview (supramolecular chemistry, self-assembly, supramolecular materials, molecular machines, etc.) Non-covalent interactions (e.g. H-bonds, electrostatic interactions, hydrophobic effect), thermodynamics Host-guest chemistry and typical hosts (e.g. calixarenes, resorcinarenes, crown ethers, cucurbiturils, cyclodextrins) Concepts of supramolecular synthesis (e.g. template, self-organization, self-sorting, cooperative binding) Methods for characterization of supramolecular compounds (e.g. NMR, UV/Vis titrations, mass spectrometry) Functional molecules (e.g. molecular switches, rotaxanes, sensors, molecular machines) Supramolecular materials (non-covalent polymers, gelators, liquid crystals) Supramolecular interactions in biological molecules (protein folding, ion channels, cell membranes) 	
Learning Outcomes / Competences:	
<p>The students</p> <ul style="list-style-type: none"> know the basic concepts of supramolecular chemistry and typical host molecules, and have a detailed understanding of non-covalent interactions between molecules, can apply the concepts of supramolecular synthesis to unknown compounds and find ways to prepare them, are familiar with methods for analyzing non-covalent interactions and for structural characterization of supramolecular compounds, know the importance of supramolecular chemistry for functional molecules, in materials science and in living systems, acquire scientific skills to search for scientific literature and to evaluate scientific content, are able to independently acquire further knowledge of the scientific topic using various forms of information 	
Workload:	
Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study)	
Conditions: Recommended: basic knowledge in organic chemistry, basic knowledge in coordination chemistry	Credit Requirements: one written examination, 90 min.
Frequency: each summer semester	
Contact Hours: 4	Recommended Semester: from 1. Minimal Duration of the Module: 1 semester[s] Repeat Exams Permitted: according to the examination regulations of the study program

Parts of the Module

Examination Prerequisites: Supramolecules and molecular design in materials science

Module PHM-0361: Catalysis <i>Catalysis</i>	6 ECTS/LP	
Version 1.0.0 (since WS23/24)		
Person responsible for module: Prof. Dr. Wolfgang Scherer		
Contents:		
<p>Introduction to catalysis (history and milestones)</p> <p>Basic principles of <i>homogeneous</i> and <i>heterogeneous</i> catalysis</p> <p>Homogeneous and heterogeneous <i>catalytic processes</i></p>		
Examples:		
<ul style="list-style-type: none"> • Activation and utilization of carbon dioxide in catalytic processes • Methane conversion to methanol, hydrogen and ammonia • Carbonylation of methanol • Carbon monoxide conversion • Nitrogen fixation • Polymerization of olefines • Hydrogenation and hydroformylation of olefins, Fischer-Tropsch synthesis, C1 chemistry • Metathesis 		
Learning Outcomes / Competences:		
By completing this course, the students		
<ul style="list-style-type: none"> • gain the <i>knowledge</i> in fundamental concepts of homogeneous and heterogeneous catalysis to <i>understand</i> complex reaction mechanisms, the chemical bonding, structural chemistry and chemical properties of homogeneous and heterogeneous catalysts. • they gain <i>practical skills</i> to synthesize and characterize homogeneous and heterogeneous catalysts by means of spectroscopic techniques (UV-Vis, NMR, IR und Raman spectroscopy). • they gain the <i>intellectual skills</i> to design/optimize catalysts with regard to external control parameters (pressure, temperature, solvents) and intrinsic factors (steric request/electronic structure of the catalytically active sites). • they obtain the <i>transferrable skills</i> to extract relevant information from scientific literature. 		
Remarks:		
The module can be studied in the MSc programs "Materialchemie", "Materials Science" and "Materials Science and Engineering"		
Workload:		
Total: 180 h		
Conditions: Basic knowledge in inorganic and organic chemistry	Credit Requirements: Passing the module exam	
Frequency: each winter semester each winter semester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]

Catalysis
written exam / length of examination: 90 minutes, graded

Module INF-0277: Analyzing Massive Data Sets <i>Analyzing Massive Data Sets</i>	8 ECTS/LP	
Version 1.2.0 (since SoSe18) Person responsible for module: Prof. Dr. Peter Michael Fischer		
Learning Outcomes / Competences:		
After attending the course, students will be able to understand and evaluate the concepts and methods, procedures, techniques, and technologies for analyzing massively large data sets. Possible content includes:		
<ul style="list-style-type: none"> • Fundamentals of information retrieval • Similarity search and clustering • Analysis of data streams and temporal data • Web graphs: Link analysis and social networks • Dynamic networks and information diffusion • Recommender systems and online advertising • Computational methods for massive data sets 		
Students will also be able to implement technical solution concepts for analyzing large data sets in programs.		
Key Skills: Ability to think logically, analytically and conceptually, weigh up approaches to solutions, acquire abstraction skills; subject-specific in-depth knowledge; implement subject-specific solution concepts in programs and models; knowledge of the advantages/disadvantages of design alternatives and evaluation in the respective application context; selection and confident application of suitable methods; ability to make scientifically meaningful evaluations using suitable methods; ability to solve problems under practical boundary conditions; competence in recognizing significant technical developments;		
Workload:		
Total: 240 h 30 h studying of course content using literature (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using provided materials (self-study) 60 h lecture (attendance) 30 h exercise course (attendance)		
Conditions:		
Module Database Systems (INF-0073) - recommended Module Discrete structures for computer science (INF-0109) - recommended Module Computer Science 3 (INF-0111) - recommended		
Frequency: Sommersemester	Recommended Semester: from 1.	Minimal Duration of the Module: 1 semester[s]
Contact Hours: 6	Repeat Exams Permitted: according to the examination regulations of the study program	
Parts of the Module		
Part of the Module: Analyzing Massive Data Sets (Vorlesung) Mode of Instruction: lecture Language: English Frequency: irregular (usu. summer semester) Contact Hours: 4		
Contents: The lecture covers basic concepts for the analysis of massively large data sets such as information extraction, similarity search, clustering, link and network analysis as well as their implementation.		

Literature:

Module INF-0316: Machine Learning and Computer Vision <i>Machine Learning and Computer Vision</i>	8 ECTS/LP
Version 1.0.0 (since SoSe19) Person responsible for module: Prof. Dr. Rainer Lienhart	
Learning Outcomes / Competences:	
<p>After successful participation in this module, students possess advanced knowledge of machine learning (decision trees, neural networks and deep neural networks, hypothesis evaluation, instance-based learning, Bayesian learning, learning theory), data reduction (e.g. principal component analysis), advanced image processing and machine vision and are able to apply them. They can analyse, understand and programmatically implement scientifically complex procedures in the field of multimedia data processing, as well as to appropriately apply the principles learned to new problems. They develop skills in logical, analytical and conceptual thinking in the field of digital signal processing and multimedia data processing.</p>	
<p>Key qualifications: advanced mathematical-formal logic; implementation of subject-specific solution concepts; interdisciplinary knowledge; development and implementation of solution strategies for complex problems; systematic further development of design methods; ability to solve problems under practical boundary conditions.</p>	
Workload:	
<p>Total: 240 h 30 h exercise course (attendance) 60 h lecture (attendance) 30 h studying of course content using provided materials (self-study) 90 h studying of course content through exercises / case studies (self-study) 30 h studying of course content using literature (self-study)</p>

Examination

Machine Learning and Computer Vision (Exam)

written exam / length of examination: 120 minutes, graded

Test Frequency:

each semester

Description:

The examination can be taken every semester during the examination period.

Module MRM-0112: Finite element modeling of multiphysics phenomena <i>Finite-Elemente-Modellierung von Multiphysik-Phänomenen</i>	6 ECTS/LP
Version 2.9.0 (since WS19/20) Person responsible for module: Prof. Dr. Markus Sause Dozenten: Prof. Dr. Sause / Prof. Dr Peter	
Learning Outcomes / Competences:	
The students	
<ul style="list-style-type: none"> • get to know existing numerical methods for modeling and simulation of physical processes and systems • Learn the use and application of numerical methods for realistic problems • Are able to apply basic functional principles of a FEM program by using "COMSOL Multiphysics". 	
Remarks: This module is offered by faculty from MRM and Mathematics. It is intended for physics, MSE and WING students, who want to get an insight into a modern FEM program as it is used in academic and industrial applications.	
Workload: Total: 180 h	
Conditions: Recommended: MTH-6110 - Numerische Verfahren für Materialwissenschaftler, Physiker und Wirtschaftsingenieure	Credit Requirements: Bestehen der Modulprüfung
Frequency: each summer semester	Recommended Semester: from 1.
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
Part of the Module: <i>Finite-Elemente-Modellierung von Multiphysik-Phänomenen</i> Mode of Instruction: lecture Lecturers: Prof. Dr. Malte Peter, Prof. Dr. Markus Sause Language: German Contact Hours: 2	
Contents: The following content will be presented: <ul style="list-style-type: none"> • Modeling and simulation of physical processes and systems. • Basic concepts of FEM programs • Generation of meshes • Optimization strategies • Selection of solver algorithms • Example applications from electrodynamics • Example applications from thermodynamics • Example applications from continuum mechanics • Example applications from fluid dynamics • Coupling of differential equations for the solution of multiphysics phenomena

Module MRM-0153: CMC product development using ICME (Integrated Computational Materials Engineering) <i>CMC-Produktentwicklung mittels ICME (Integrated Computational Materials Engineering)</i>	6 ECTS/LP
--	-----------

Version 1.0.0

Person responsible for module: Prof. Dr.-Ing. Dietmar Koch

Contents:

The development of ceramic fiber composite components is an iterative product development process due to the component-specific material properties. These iterations serve to assess feasibility or material characterization and are often associated with time-, cost-, and resource-intensive testing programs, feature prototypes, or demonstrator components. Therefore, this approach is heuristic (trial and error).

In contrast, CMC (Ceramic Matrix Composite) product development through ICME (Integrated Computational Materials Engineering) aims to partially shift the development process into the virtual space using ICME tools, thereby minimizing real sample and component testing through the use of digital models. The ICME approach originally developed for metallic materials can be applied particularly to fiber-reinforced composites due to their pronounced dependence on material properties on the manufacturing process and component geometry.

Learning Outcomes / Competences:

In the lecture on CMC (Ceramic Matrix Composite) product development using ICME (Integrated Computational Materials Engineering), students are provided with an overview of the current state of technology, the currently available ICME tools in the field of fiber-reinforced composites, and their application through case studies.

Conditions: Keine	Credit Requirements: Bestehen der Modulprüfung

Module PHM-0270: Computational Chemistry and Material Modeling <i>Computerchemie/Materialmodellierung</i>	6 ECTS/LP
Version 1.0.0 (since SoSe22) Person responsible for module: PD Georg Eickerling	
Contents:	
The lecture provides advanced insights into computational chemistry and modeling of molecular and solid-state materials:	
<ul style="list-style-type: none"> • advanced introduction into the methods and concepts of quantum-chemical calculations • <i>mean-field</i> and <i>Density Functional Theory</i> methods • methods for describing electronic correlation • modeling chemical reactions of molecular compounds • from molecules to solids: modeling materials employing periodic boundary conditions • modeling dynamic and spectroscopic properties of molecules and solids (IR, Raman, NMR UV/VIS) • modeling materials under pressure • modeling surfaces 	
Learning Outcomes / Competences:	
The students	
<ul style="list-style-type: none"> • know advanced concepts for modeling molecular and solid state compounds • are able to evaluate the applicability of these concepts to a range of questions that might occur within the scope of materials chemistry and are thus able to evaluate the required and achievable accuracy of the selected computational method • are able to apply the obtained knowledge of the theoretical concepts within the scope of hands-on quantum chemical calculations and under guidance develop strategies for investigating theoretical aspects of materials chemistry • have the expertise to analyze, understand and evaluate the results obtained from different quantum chemical calculation methods and are competent to develop strategies for an advanced analysis of thus problems 	
Workload:	
Total: 180 h 45 h lecture (attendance) 15 h exercise course (attendance) 30 h studying of course content using literature (self-study) 60 h studying of course content through exercises / case studies (self-study) 30 h (self-study)	
Conditions: It is recommended to attend module PHM-0248 first.	Credit Requirements: passing the module examination
Frequency: each summer semester	Recommended Semester:
Contact Hours: 4	Repeat Exams Permitted: according to the examination regulations of the study program
Parts of the Module	
Part of the Module: Computational Chemistry and Material Modeling Mode of Instruction: lecture Language: German Contact Hours: 3	

Contents:

see description of module

Lehr-/Lernmethoden:

blackboard and projector presentation

Literature:

- I. N. Levine *Quantum Chemistry*, 7th Ed., Pearson, Boston, US **2013**.
- A. Szabo, N. S. Ostlund *Modern Quantum Chemistry*, Dover, NY, US **1996**.
- E. G. Lewars *Computational Chemistry*, 3rd Ed., Springer, Cham, Switzerland, **2016**.
- D. C. Young *Computational Chemistry: A practical guide for applying techniques to real world problems*, Wiley, NY, US **2001**.
- R. A. van Santen, Ph. Sautet *Computational Methods in Catalysis and Materials Science*, Wiley, Weinheim, Deutschland, **2009**.
- J. B. Foresman, *Exploring Chemistry with Electronic Structure Methods*, 3rd Ed., Gaussian Inc., Wallingford, US, **2015**.

Part of the Module: Tutorials for Computational Chemistry and Material Modeling

Mode of Instruction: exercise course

Language: German

Contact Hours: 1

Lehr-/Lernmethoden:

blackboard and projector presentation, practical exercises at the computer

Examination

Computerchemie/Materialmodellierung

written exam / length of examination: 90 minutes, graded
