# **Handbook of Modules**

**Masterstudiengang Materialwissenschaften**

**Faculty of Mathematics, Natural  
Sciences, and Materials Engineering**

**valid from Summer Semester 2016**

**Prüfungsordnung vom 27.7.2007**

---

## Index by Groups of Modules

### 1) A Basics of Materials Science

PHM-0144: Materials Physics (= Materials Physics I) (6 ECTS/LP, Pflicht).....	5
PHM-0116: Advanced Materials Physics (= Materials Physics II) (6 ECTS/LP, Pflicht).....	7
PHM-0110: Materials Chemistry (6 ECTS/LP, Pflicht).....	9
PHM-0118: Physics of Surfaces and Interfaces (= Surfaces and Interfaces) (5 ECTS/LP, Pflicht).....	11

### 2) B Methods in Materials Science

PHM-0180: Characterization of Materials (6 ECTS/LP, Pflicht).....	13
PHM-0121: Processing of Materials (5 ECTS/LP, Pflicht).....	15
PHM-0174: Theoretical Concepts and Simulation (6 ECTS/LP, Pflicht).....	17
PHM-0172: Method Course: Functional Silicate-analogous Materials (8 ECTS/LP, Wahlpflicht).....	19
PHM-0148: Method Course: Optical Properties of Solids (8 ECTS/LP, Wahlpflicht).....	21
PHM-0149: Method Course: Methods in Biophysics (8 ECTS/LP, Wahlpflicht).....	23
PHM-0150: Method Course: Spectroscopy on Condensed Matter (8 ECTS/LP, Wahlpflicht).....	25
PHM-0151: Method Course: Porous Materials - Synthesis and Characterization (8 ECTS/LP, Wahlpflicht).....	27
PHM-0152: Method Course: Structure Determination in Solids (8 ECTS/LP, Wahlpflicht).....	28
PHM-0173: Method Course: Finite element modeling of multiphysics phenomena (8 ECTS/LP, Wahlpflicht).....	30
PHM-0153: Method Course: Magnetic and Superconducting Materials (8 ECTS/LP, Wahlpflicht).....	32
PHM-0154: Method Course: Modern Solid State NMR Spectroscopy (8 ECTS/LP, Wahlpflicht).....	34
PHM-0156: Method Course: Materials Synthesis (8 ECTS/LP, Wahlpflicht).....	36
PHM-0182: Method Course: Thin Film Analysis with Ion Beams (8 ECTS/LP, Wahlpflicht).....	38
PHM-0157: Method Course: X-ray and Neutron Diffraction Techniques (8 ECTS/LP, Wahlpflicht).....	40
PHM-0171: Method Course: Coordination Materials (8 ECTS/LP, Wahlpflicht).....	42
PHM-0147: Method Course: Electron Microscopy (8 ECTS/LP, Wahlpflicht).....	44
PHM-0146: Method Course: Electronics for Physicists and Materials Scientists (8 ECTS/LP, Wahlpflicht).....	46

### 3) C Materials Science Seminar

PHM-0158: Introduction to Materials (4 ECTS/LP, Pflicht).....	48
---------------------------------------------------------------	----

#### 4) D Specialization in Materials Science

PHM-0051: Biophysics and Biomaterials (6 ECTS/LP, Wahlpflicht).....	49
PHM-0160: Dielectric and Optical Materials (6 ECTS/LP, Wahlpflicht).....	51
PHM-0059: Magnetism (6 ECTS/LP, Wahlpflicht).....	53
PHM-0048: Physics and Technology of Semiconductor Devices (6 ECTS/LP, Wahlpflicht).....	55
PHM-0049: Nanostructures / Nanophysics (6 ECTS/LP, Wahlpflicht).....	57
PHM-0054: Chemical Physics II (6 ECTS/LP, Wahlpflicht).....	59
PHM-0161: Coordination Materials (6 ECTS/LP, Wahlpflicht).....	61
PHM-0113: Advanced Solid State Materials (6 ECTS/LP, Wahlpflicht).....	63
PHM-0162: Solid State NMR Spectroscopy and Diffraction Methods (6 ECTS/LP, Wahlpflicht).....	65
PHM-0164: Characterization of Composite Materials (6 ECTS/LP, Wahlpflicht).....	67
PHM-0163: Fiber Reinforced Composites: Processing and Materials Properties (6 ECTS/LP, Wahlpflicht).....	69
PHM-0165: Introduction to Mechanical Engineering (6 ECTS/LP, Wahlpflicht).....	71
MRM-0052: Functional Polymers (6 ECTS/LP, Wahlpflicht).....	73
PHM-0168: Modern Metallic Materials (6 ECTS/LP, Wahlpflicht).....	75
PHM-0167: Oxidation and Corrosion (6 ECTS/LP, Wahlpflicht).....	77
PHM-0122: Non-Destructive Testing (6 ECTS/LP, Wahlpflicht).....	79
PHM-0053: Chemical Physics I (6 ECTS/LP, Wahlpflicht).....	81
PHM-0050: Electronics for Physicists and Materials Scientists (6 ECTS/LP, Wahlpflicht).....	83
PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (6 ECTS/LP, Wahlpflicht).....	85
PHM-0056: Ion-Solid Interaction (6 ECTS/LP, Wahlpflicht).....	87
PHM-0057: Physics of Thin Films (6 ECTS/LP, Wahlpflicht).....	89
PHM-0058: Organic Semiconductors (6 ECTS/LP, Wahlpflicht).....	91
PHM-0060: Low Temperature Physics (6 ECTS/LP, Wahlpflicht).....	93
PHM-0066: Superconductivity (6 ECTS/LP, Wahlpflicht).....	95
PHM-0068: Spintronics (6 ECTS/LP, Wahlpflicht).....	97
PHM-0069: Applied Magnetic Materials and Methods (6 ECTS/LP, Wahlpflicht).....	99
PHM-0114: Porous Functional Materials (6 ECTS/LP, Wahlpflicht).....	101
PHM-0166: Carbon-based functional Materials (Carboterials) (6 ECTS/LP, Wahlpflicht).....	103

## Table of Contents

---

PHM-0184: Sustainable Resource Management (6 ECTS/LP, Wahlpflicht).....	105
PHM-0145: Practical Laboratory Project (6 ECTS/LP, Wahlpflicht).....	107
PHM-0196: Surfaces and Interfaces II: Joining processes (6 ECTS/LP, Wahlpflicht).....	108

### **5) E Finals**

PHM-0169: Masterthesis (26 ECTS/LP, Pflicht).....	110
PHM-0170: Colloquium (4 ECTS/LP, Pflicht).....	111

<b>Module PHM-0144: Materials Physics (= Materials Physics I)</b>		ECTS Credits: 6
Version 1.1.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Helmut Karl		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Electrons in solids</li> <li>• Phonons</li> <li>• Properties of metals, semiconductors and insulators</li> <li>• Application in optical, electronic, and optoelectronic devices</li> <li>• Dielectric solids, optical properties</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students know the basic terms and concepts of solid state physics like the free electron gas, electronic band structure, charge carrier statistics, phonons, doping and optical properties,</li> <li>• are capable to apply derived approximations as the effective mass or the electron-hole concept to describe basic characteristics of semiconductor materials,</li> <li>• have the competence to apply these concepts for the description of electric, electro-optic and thermal properties of solids and to describe their functionalities,</li> <li>• understand size effects on material physical properties.</li> <li>• Integrated acquirement of soft skills: Working with specialist literature, literature search and interdisciplinary thinking.</li> </ul>		
<b>Remarks:</b> compulsory module		
<b>Workload:</b> Total: 180 h 120 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> basic knowledge of solid state physics		
<b>Frequency:</b> each winter semester	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

**Parts of the Module****Part of the Module: Materials Physics****Mode of Instruction:** lecture**Language:** English**Contact Hours:** 3**Learning Outcome:**

see module description

**Contents:**

- Electrons in solids: Free electron gas, band structure, effective mass
- Lattice dynamics: Phonons, phonon dispersion, acoustic and optical phonons
- Properties of metals: Electrical conductivity, Fermi surfaces, thermal properties
- Properties of semiconductors: Pure, intrinsic semiconductors, equilibrium conditions, doping
- Properties of dielectric materials: Propagation of electromagnetic waves, frequency dependent optical properties, polarization effects.
- Application in devices: Heterostructures, Schottky contact, pn-junction, solar cell, light emission and technological aspects

**Literature:**

- Hummel R. E. : Electronic Properties of Materials Springer 2001 (UP1000 H925)
- Burns G.: Solid State Physics Academic Press 1990 (UP1000 B967)
- Ashcroft N. W. , Mermin N.D. : Solid State Physics (UP1000 A 824)
- Kittel C. : Introduction to Solid State Physics (UP1000 K 62)

**Part of the Module: Materials Physics (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Learning Outcome:**

see module description

**Examination**

**Materials Physics**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Materials Physics

<b>Module PHM-0116: Advanced Materials Physics (= Materials Physics II)</b>		ECTS Credits: 6
Version 1.0.0 (since WS15/16) Person responsible for module: apl. Prof. Dr. Helmut Karl		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Magnetic materials</li> <li>• Superconductivity</li> <li>• Thermodynamics of materials</li> <li>• Thermal properties</li> <li>• Atomic transport</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students know the physical and chemical fundamentals and the different resulting material properties,</li> <li>• are able to characterize Materials according to their magnetic, thermal, and transportation properties, and to do correspondent calculations using simple models,</li> <li>• have the competence to deal extensively autonomous with scientific problems of the above mentioned areas.</li> <li>• Integrated acquirement of soft skills: Working with specialist literature, literature search and interdisciplinary thinking.</li> </ul>		
<b>Workload:</b> Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> Basic knowledge of solid state physics		
<b>Frequency:</b> irregular (usu. summer semester)	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Advanced Materials Physics</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3		
<b>Learning Outcome:</b> see module description		

**Contents:**

- Magnetic materials
  - Magnetization
  - Atomic origin of magnetic moments
  - Paramagnetism
  - Ferromagnetism
  - Anisotropy
  - Ferromagnetic materials, hard and soft magnets
  - Magneto-optics
- Superconductivity
  - Basic phenomena
  - Meissner effect
  - Energy gap
  - London equation
  - Basic ideas of the BCS theory, Cooper pairs
  - Type I/II superconductors
  - High temperature superconducting materials, flux pinning
- Thermodynamics of materials
  - Review of basic terms
  - Equilibrium conditions
  - Phase diagrams
  - Multiphase-multicomponent equilibria
  - Thermodynamics of point defects
  - Thermodynamics of interfaces
- Thermal Properties
  - Specific Heat
  - Thermal Expansion
  - Thermal Transport
  - Thermal Radiation
  - Thermoelectricity
- Atomic transport
  - Diffusion
  - Electro-, thermo-, stress migration

**Literature:**

- Charles Kittel: Introduction to Solid State Physics (Wiley & Sons)
- Werner Buckel und Reinhold Kleiner: Supraleitung (Wiley-VCH)

**Part of the Module: Advanced Materials Physics (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Learning Outcome:**

see module description

**Examination**

**Materials Physics II**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Materials Physics II

<b>Module PHM-0110: Materials Chemistry</b>		ECTS Credits: 6
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Henning Höpfe		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Revision of basic chemical concepts</li> <li>• Solid state chemical aspects of selected materials, such as <ul style="list-style-type: none"> <li>◦ Thermoelectrics</li> <li>◦ Battery electrode materials, ionic conductors</li> <li>◦ Hydrogen storage materials</li> <li>◦ Data storage materials</li> <li>◦ Phosphors and pigments</li> <li>◦ Ferroelectrics and Piezoelectrics</li> <li>◦ Heterogeneous catalysis</li> <li>◦ nanoscale materials</li> </ul> </li> </ul>		
<b>Learning Outcomes / Competences:</b> The students will <ul style="list-style-type: none"> <li>• be able to apply basic chemical concepts on materials science problems,</li> <li>• broaden their ability to derive structure-property relations of materials combining their extended knowledge about symmetry-related properties, chemical bonding in solids and chemical properties of selected compound classes,</li> <li>• be able to assess synthetic approaches towards relevant materials,</li> <li>• acquire skills to perform literature research using online data bases.</li> </ul>		
<b>Workload:</b> Total: 180 h 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> The lecture course is based on the Bachelor in Materials Science courses Chemie I and Chemie III (solid state chemistry).		
<b>Frequency:</b> each winter semester	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Materials Chemistry</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3		
<b>Learning Outcome:</b> see description of module		
<b>Contents:</b> see description of module		

**Literature:**

- A. R. West, Solid State Chemistry, John Wiley, Chichester.
- U. Müller, Inorganic Structural Chemistry, Wiley-VCH.
- R. Dronskowski, Computational Chemistry of Solid State Materials, Wiley VCH.
- Textbooks on Basics of Inorganic Chemistry such as J. E. Huheey, E. Keiter, R. Keiter, Anorganische Chemie, de Gruyter, or equivalents.
- Moreover, selected reviews and journal articles will be cited on the slides.

**Part of the Module: Materials Chemistry (Tutorial)**

**Mode of Instruction:** exercise course

**Examination**

**Materials Chemistry**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Materials Chemistry

<b>Module PHM-0118: Physics of Surfaces and Interfaces (= Surfaces and Interfaces)</b>		ECTS Credits: 5
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Siegfried Horn Dozenten: Dr. Aladin Ullrich, Dr. Judith Moosburger-Will		
<b>Contents:</b> Introduction <ul style="list-style-type: none"> <li>The importance of surfaces and interfaces</li> </ul> Some basic facts from solid state physics <ul style="list-style-type: none"> <li>Crystal lattice and reciprocal lattice</li> <li>Electronic structure of solids</li> <li>Lattice dynamics</li> </ul> Physics at surfaces and interfaces <ul style="list-style-type: none"> <li>Structure of ideal and real surfaces</li> <li>Relaxation and reconstruction</li> <li>Transport (diffusion, electronic) on interfaces</li> <li>Thermodynamics of interfaces</li> <li>Electronic structure of surfaces</li> <li>Chemical reactions on solid state surfaces (catalysis)</li> <li>Interface dominated materials (nano scale materials)</li> </ul> Methods to study chemical composition and electronic structure, application examples <ul style="list-style-type: none"> <li>Scanning electron microscopy</li> <li>Scanning tunneling and scanning force microscopy</li> <li>Auger – electron – spectroscopy</li> <li>Photo electron spectroscopy</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>have knowledge of the structure, the electrical properties, the thermodynamics, and the chemical reactions on surfaces and interfaces,</li> <li>acquire the skill to solve problems of fundamental research and applied sciences in the field of surface and interface physics,</li> <li>have the competence to solve certain problems autonomously based on the thought physical basics.</li> <li>Integrated acquirement of soft skills.</li> </ul>		
<b>Workload:</b> Total: 150 h		
<b>Conditions:</b> The module "Physics IV - Solid State Physics" of the Bachelor of Physics / Materials Science program should be completed first.		
<b>Frequency:</b> annually	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

<b>Parts of the Module</b>
<b>Part of the Module: Physics of Surfaces and Interfaces</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3
<b>Learning Outcome:</b> see module description
<b>Literature:</b> <ul style="list-style-type: none"><li>• Ertl, Küppers: Low Energy Electrons and Surface Chemistry (VCH)</li><li>• Lüth: Surfaces and Interfaces of Solids (Springer)</li><li>• Zangwill: Physics at Surfaces (Cambridge)</li><li>• Feldmann, Mayer: Fundamentals of Surface and thin Film Analysis (North Holland)</li><li>• Henzler, Göpel: Oberflächenphysik des Festkörpers (Teubner)</li><li>• Briggs, Seah: Practical Surface Analysis I und II (Wiley)</li></ul>
<b>Part of the Module: Physics of Surfaces and Interfaces (Tutorial)</b> <b>Mode of Instruction:</b> exercise course <b>Language:</b> English <b>Contact Hours:</b> 1
<b>Examination</b> <b>Physics of Surfaces and Interfaces</b> written exam / length of examination: 90 minutes <b>Examination Prerequisites:</b> Physics of Surfaces and Interfaces

<b>Module PHM-0180: Characterization of Materials</b>		ECTS Credits: 6
Version 1.0.0 (since SoSe15) Person responsible for module: Priv.-Doz. Dr. Markus Sause		
<b>Contents:</b>		
<ol style="list-style-type: none"> <li>1. X-ray diffraction [2]</li> <li>2. Mechanical characterization [2]</li> <li>3. Optical methods [2]</li> <li>4. Electrical measurements and characterization [2]</li> <li>5. NMR spectroscopy [2]</li> <li>6. Spectroscopy using synchrotron radiation[2]</li> <li>7. Thermal analysis [2]</li> <li>8. Ion beam methods [2]</li> <li>9. Charakterization of organic systems [2]</li> <li>10. Electron microscopy [2]</li> </ol>		
<b>Learning Outcomes / Competences:</b>		
Basic characterization methods will be introduced to the students in a lecture series with a workload of 4 hrs each.		
The students:		
<ul style="list-style-type: none"> <li>• know the basic characterization methods of materials science,</li> <li>• acquire knowledge how to apply these methods,</li> <li>• acquire the competence to use these techniques for the analysis of structural, chemical, electronical, magnetical, and optical properties of materials.</li> </ul>		
<b>Remarks:</b>		
<b>COMPULSORY MODULE</b>		
starting from summer term 2014 this compulsory lecture is replaced by "Characterization of Composite Materials"		
<b>Workload:</b>		
Total: 120 h		
60 h lecture and exercise course (attendance)		
60 h studying of course content using provided materials (self-study)		
<b>Conditions:</b>		
Recommended: basic knowledge in Materials Science		
<b>Frequency:</b>	<b>Recommended Semester:</b>	<b>Minimal Duration of the Module:</b>
each winter semester	from 1.	1 semester[s]
<b>Contact Hours:</b>	<b>Repeat Exams Permitted:</b>	
4	according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Characterization of Composite Materials</b>		
<b>Mode of Instruction:</b> lecture		
<b>Language:</b> English		
<b>Contact Hours:</b> 3		

**Literature:**

- Morgan: Carbon fibers and their composites
- Henning, Moeller: Handbuch Leichtbau
- Schürmann: Konstruieren mit Faser-Kunststoff-Verbunden
- Neitzel, Mitschang: Handbuch Verbundwerkstoffe
- Dowling: Mechanical behaviour of materials
- Issler: Festigkeitslehre - Grundlagen
- Landau, Lifschitz: Theoretische Physik Vol. 7

Further literature - actual scientific papers and reviews - will be announced at the beginning of the lecture.

**Assigned Courses:**

**Characterization of Composite Materials** (lecture)

**Part of the Module: Characterization of Composite Materials (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Literature:**

see lecture

**Assigned Courses:**

**Characterization of Composite Materials (Tutorial)** (exercise course)

**Examination**

**Characterization of Materials**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Characterization of Materials

<b>Module PHM-0121: Processing of Materials</b>		ECTS Credits: 5
Version 1.0.0 Person responsible for module: Prof. Dr. Ferdinand Haider		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Processing of polymers</li> <li>• Processing of thin films</li> <li>• Processing of semiconductors</li> <li>• Processing of composites</li> <li>• Processing of metals and alloys</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• Die Studierenden kennen die wichtigsten Methoden der Materialbe- und -verarbeitung für die unterschiedlichen Klassen von Materialien – Halbleiter, Dünnschichtmaterialien, Polymere, Metalle, Verbundmaterialien,</li> <li>• beherrschen neben industriellen Verfahren auch Methoden, die bislang eher im Labormassstab realisiert sind,</li> <li>• und besitzen die Kompetenz, aktuelle Problemstellungen aus dem obengenannten Themenbereich selbständig zu bearbeiten.</li> <li>• Integrierter Erwerb von Schlüsselqualifikationen</li> </ul>		
<b>Workload:</b> Total: 150 h 60 h lecture and exercise course (attendance) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 50 h studying of course content through exercises / case studies (self-study)		
<b>Conditions:</b> none		
<b>Frequency:</b> annually	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 3	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Processing of Materials</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3		
<b>Learning Outcome:</b> siehe Modulbeschreibung		
<b>Contents:</b> siehe Modulbeschreibung		
<b>Literature:</b> <ul style="list-style-type: none"> <li>• M. Ohring, Materials science of thin films (Academic Press)</li> <li>• H. E. H. Meijer (ed.), Processing of polymers (Wiley-VCH)</li> <li>• K. A. Jackson, Processing of semiconductors (VCH)</li> <li>• M. Stuke, Materials surface processing (Elsevier)</li> <li>• R. W. Cahn, Processing of metals and alloys (VCH)</li> </ul>		

**Examination**

**Processing of Materials**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Processing of Materials

<b>Module PHM-0174: Theoretical Concepts and Simulation</b>		ECTS Credits: 6
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Liviu Chioncel		
<b>Contents:</b> <ol style="list-style-type: none"> <li>1. Introduction: operating systems, programming languages, data visualization tools</li> <li>2. Basic numerical methods: interpolation, integration</li> <li>3. Ordinary and Partial Differential Equations (e.g., diffusion equation, Schrödinger equation)</li> <li>4. Molecular dynamics</li> <li>5. Monte Carlo simulations</li> </ol>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the principal concepts of thermodynamics and statistical physics as well as the numerical methods relevant in material science,</li> <li>• are able to solve simple problems numerically. They are able to write the codes and to present the results,</li> <li>• have the expertise to find the numerical method appropriate for the given problem and to judge the quality and validity of the numerical results,</li> <li>• Integrated acquirement of soft skills: independent handling of hard- and software while using English documentations, ability to investigate abstract circumstances with the help of a computer and present the results in written and oral form, capacity for teamwork.</li> </ul>		
<b>Remarks:</b> Links to software related to the course: <ul style="list-style-type: none"> <li>• <a href="http://www.bloodshed.net/">http://www.bloodshed.net/</a></li> <li>• <a href="http://www.cplusplus.com/doc/tutorial/">http://www.cplusplus.com/doc/tutorial/</a></li> <li>• <a href="http://www.cygwin.com/">http://www.cygwin.com/</a></li> <li>• <a href="http://xmd.sourceforge.net/download.html">http://xmd.sourceforge.net/download.html</a></li> <li>• <a href="http://www.rasmol.org/">http://www.rasmol.org/</a></li> <li>• <a href="http://felt.sourceforge.net/">http://felt.sourceforge.net/</a></li> </ul>		
<b>Workload:</b> Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> Recommended: basic knowledge of quantum mechanics, thermodynamics, and numerical methods as well as of a programming language		<b>Credit Requirements:</b> project work in small groups, including a written summary of the results (ca. 10-20 pages) as well as an oral presentation
<b>Frequency:</b> each summer semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program

<b>Assigned Courses:</b> <b>Theoretical Concepts and Simulation (Project)</b> (exercise course)
<b>Examination</b> <b>Theoretical Concepts and Simulation</b> seminar / length of examination: 30 minutes <b>Examination Prerequisites:</b> Theoretical Concepts and Simulation

<b>Module PHM-0172: Method Course: Functional Silicate-analogous Materials</b>		ECTS Credits: 8
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Henning Höpfe		
<b>Contents:</b> Synthesis and characterization of functional materials according to the topics: <ol style="list-style-type: none"> <li>1. Silicate-analogous compounds</li> <li>2. Luminescent materials / phosphors</li> <li>3. Pigments</li> <li>4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis</li> </ol>		
<b>Learning Outcomes / Competences:</b> The students will know how to: <ul style="list-style-type: none"> <li>• develop functional materials based on silicate-analogous materials,</li> <li>• apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),</li> <li>• work under non-ambient atmospheres (e.g. reducing, inert conditions),</li> <li>• solve and refine crystal structures from single-crystal data,</li> <li>• describe and classify these structures properly.</li> </ul>		
<b>Remarks:</b> <b>ELECTIVE COPULSORY MODULE</b>		
<b>Workload:</b> Total: 240 h 120 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
<b>Conditions:</b> Recommended: attendance to the lecture "Advanced Solid State Materials"		<b>Credit Requirements:</b> written report (protocol)
<b>Frequency:</b> each semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 6	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Method Course: Functional Silicate-analogous Materials (Practical Course)</b>		
<b>Mode of Instruction:</b> internship <b>Language:</b> English <b>Contact Hours:</b> 6		
<b>Learning Outcome:</b> The students will know how to: <ul style="list-style-type: none"> <li>• develop functional materials based on silicate-analogous materials,</li> <li>• apply classical and modern preparation techniques (e.g. solid state reaction, sol-gel reaction, precipitation, autoclave reactions, use of silica ampoules),</li> <li>• work under non-ambient atmospheres (e.g. reducing, inert conditions),</li> <li>• solve and refine crystal structures from single-crystal data,</li> <li>• describe and classify these structures properly.</li> </ul>		

**Contents:**

Synthesis and characterization of functional materials according to the topics:

1. Silicate-analogous compounds
2. Luminescent materials / phosphors
3. Pigments
4. Characterization methods: XRD, spectroscopy (luminescence, UV/vis, FT-IR), thermal analysis

**Assigned Courses:**

**Method Course: Functional Silicate-analogous Materials (Practical Course)** (internship)

**Examination**

**Method Course: Functional Silicate-analogous Materials**

seminar

**Examination Prerequisites:**

Method Course: Functional Silicate-analogous Materials

<b>Module PHM-0148: Method Course: Optical Properties of Solids</b>		ECTS Credits: 8
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Joachim Deisenhofer		
<b>Contents:</b> Electrodynamics of solids <ul style="list-style-type: none"> <li>• Maxwell equations</li> <li>• Electromagnetic waves</li> <li>• Refraction and interference, Fresnel equations</li> </ul> FTIR spectroscopy <ul style="list-style-type: none"> <li>• Fourier transformation</li> <li>• Michelson-Morley and Genzel interferometer</li> <li>• Sources and detectors</li> </ul> Terahertz Time Domain spectroscopy <ul style="list-style-type: none"> <li>• Generation of pulsed THz radiation</li> <li>• Gated detection, Austin switches</li> </ul> Elementary excitations in solids <ul style="list-style-type: none"> <li>• Infrared-active phonons</li> <li>• Magnetic-dipole excitations</li> <li>• Crystal-field excitations</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• get to know the basic principles of far-infrared spectroscopy and terahertz time-domain-spectroscopy,</li> <li>• learn about fundamental physical excitations in condensed matter that can be studied by these methods,</li> <li>• learn to plan and carry out complex experiments,</li> <li>• learn how to evaluate and analyze optical data.</li> </ul>		
<b>Remarks:</b>		
<b>Workload:</b> Total: 240 h 90 h lecture and exercise course (attendance) 30 h studying of course content using provided materials (self-study) 30 h studying of course content using literature (self-study) 90 h studying of course content through exercises / case studies (self-study)		
<b>Conditions:</b> Recommended: basic knowledge in solid-state physics, basic knowledge in electrodynamics and optics		<b>Credit Requirements:</b> written report
<b>Frequency:</b> irregular (usu. summer semester)	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 6	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

<p><b>Parts of the Module</b></p>
<p><b>Part of the Module: Method Course: Optical Properties of Solids</b>  <b>Mode of Instruction:</b> lecture  <b>Language:</b> English  <b>Contact Hours:</b> 2</p>

**Assigned Courses:**

**Method Course: Methods in Biophysics (Practical Course)** (internship)

**Examination**

**Method Course: Methods in Biophysics**

**Examination Prerequisites:**

Method Course: Methods in Biophysics

<b>Module PHM-0150: Method Course: Spectroscopy on Condensed Matter</b>		ECTS Credits: 8
Version 1.0.0 (since SoSe15) Person responsible for module: Dr. Stephan Krohns		
<b>Contents:</b> Dielectric Spectroscopy [8] <ul style="list-style-type: none"> <li>• Methods</li> <li>• Cryo-techniques</li> <li>• Measurement quantities</li> <li>• Relaxation processes</li> <li>• Dielectric phenomena</li> </ul> Ferroelectric Materials [7] <ul style="list-style-type: none"> <li>• Mechanism of ferroelectric polarization</li> <li>• Hysteresis loop measurements</li> <li>• Dielectric spectroscopy</li> </ul> Glassy Matter [8] <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Glassy phenomena</li> <li>• Dielectric spectroscopy</li> </ul> Multiferroic Materials [7] <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Microscopic origins of multiferroicity</li> <li>• Pyrocurrent measurements</li> <li>• Dielectric spectroscopy</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• learn about the basic concepts of dielectric spectroscopy and the phenomena examined with it. Therefore they are instructed in experimental methods for the investigation of the dielectric properties of condensed matter,</li> <li>• are trained in planning and performing complex experiments. They learn to evaluate and analyze the collected data,</li> <li>• are taught to work on problems in experimental solid state physics, including analysis of measurement results and their interpretation in the framework of models and theories.</li> </ul>		
<b>Remarks:</b> <b>ELECTIVE COMPULSORY MODULE</b>		
<b>Workload:</b> Total: 240 h		
<b>Conditions:</b> Recommended: basic knowledge in solid state physics, basic knowledge in physics of glasses and supercooled liquids		<b>Credit Requirements:</b> written report on the experiments (editing time 2 weeks)
<b>Frequency:</b> irregular (usu. winter semester)	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 6	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program

**Examination**

**Method Course: Structure Determination in Solids**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Method Course: Structure Determination in Solids

<b>Module PHM-0173: Method Course: Finite element modeling of multiphysics phenomena</b>		ECTS Credits: 8
Version 1.0.0 (since SoSe15) Person responsible for module: Priv.-Doz. Dr. Markus Sause		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Modeling and simulation of physical processes and phenomena</li> <li>• Basic concepts of FEM programs</li> <li>• Generation of meshes</li> <li>• Optimization strategies</li> <li>• Selection of solvers</li> <li>• Examples from electrodynamics</li> <li>• Examples from thermodynamics</li> <li>• Examples from continuum mechanics</li> <li>• Examples from fluid dynamics</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• Students know established numerical procedures to model and simulate physical processes and systems</li> <li>• Students acquire abilities to build numerical models based on real world challenges</li> <li>• Students learn basic operational principles of FEM tools based on the program „COMSOL Multiphysics“</li> </ul>		
<b>Remarks:</b> <b>ELECTIVE COMPULSORY MODULE</b> This module is provided by external lecturers and lecturers from the mathematics and physics department. It is dedicated to materials scientists, physicists and engineers who intend to strengthen their background in numerical simulation using state-of-the-art FEM programs.		
<b>Workload:</b> Total: 240 h 120 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study)		
<b>Conditions:</b> Recommended: basic knowledge of numerical concepts		<b>Credit Requirements:</b> 1 written report on selected topic, editing time 2 weeks
<b>Frequency:</b> each winter semester	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 6	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program

Method Course: Coordination Materials (Seminar)

<b>Module PHM-0147: Method Course: Electron Microscopy</b>		ECTS Credits: 8
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Ferdinand Haider		
<b>Contents:</b> 1. Scanning electron microscopy (SEM) 2. Transmission electron microscopy (TEM)		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• get introduced to the basics of scanning electron microscopy and transmission electron microscopy, using lectures to teach the theoretical basics, which are afterwards deepened using practical courses,</li> <li>• are able to characterize materials using different electron microscopy techniques and to decide, if the technique is feasible for a certain problem.</li> </ul>		
<b>Remarks:</b> <b>ELECTIVE COMPULSORY MODULE</b>		
<b>Workload:</b> Total: 240 h 150 h studying of course content using provided materials (self-study) 90 h lecture and exercise course (attendance)		
<b>Conditions:</b> Recommended: knowledge of solid-state physics, reciprocal lattice		<b>Credit Requirements:</b> written report (one report per group)
<b>Frequency:</b> each summer semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 6	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Method Course: Electron Microscopy</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 2		

**Contents:****SEM:**

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

**TEM:**

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM

**Contents:**

- Radiation Biophysics
  - Radiation sources
  - Interaction of radiation with biological matter
  - Radiation protection principles
  - Low dose radiation
  - LNT model in radiation biophysics
- Microfluidics
  - Life at Low Reynolds Numbers
  - The Navier-Stokes Equation
  - Low Reynolds Numbers – The Stokes Equation
  - Breaking the Symmetry
- Membranes
  - Thermodynamics and Fluctuations
  - Thermodynamics of Interfaces
  - Phase Transitions – 2 state model
  - Lipid membranes and biological membranes, membrane elasticity
- Membranal transport
  - Random walk, friction and diffusion
  - Transmembranal ionic transport and ion channels
  - Electrophysiology of cells
  - Neuronal Dynamics

<b>Contents:</b>		
A)		
<ul style="list-style-type: none"> <li>• Historical development of coordination chemistry [1]</li> <li>• Structures and nomenclature rules [2]</li> <li>• Chemical bonds in transition metal coordination compounds [3]</li> <li>• Stability of transition metal compounds [2]</li> <li>• Characteristic reactions [4]B</li> </ul>		
B) Selected classes of functional materials		
<ul style="list-style-type: none"> <li>• Bioinorganic chemistry [2]</li> <li>• Coordination compounds in medical applications [1]</li> <li>• Coordination polymers / metal-organic frameworks [4]</li> <li>• Cluster compounds [2]</li> </ul>		
<b>Learning Outcomes / Competences:</b>		
The students		
<ul style="list-style-type: none"> <li>• shall acquire knowledge about concepts of chemical bonding in coordination chemistry (main emphasis: d-block transition metal compounds),</li> <li>• broaden their capabilities to interpret UV/vis absorption spectra and to predict stability and reactivity of coordination compounds,</li> <li>• learn how to transfer concepts of coordination chemistry onto topics of materials sciences.</li> <li>• Integrated acquirement of soft skills.</li> </ul>		
<b>Remarks:</b>		
<b>ELECTIVE COMPULSORY MODULE</b>		
<b>Workload:</b>		
Total: 180 h		
20 h studying of course content using provided materials (self-study)		
20 h studying of course content using literature (self-study)		
80 h studying of course content through exercises / case studies (self-study)		
60 h lecture and exercise course (attendance)		
<b>Conditions:</b>		
Recommended: The lecture course is based on the courses "Chemistry I", "Chemistry II"		
<b>Frequency:</b>	<b>Recommended Semester:</b>	<b>Minimal Duration of the Module:</b>
each summer semester	from 2.	1 semester[s]
<b>Contact Hours:</b>	<b>Repeat Exams Permitted:</b>	
4	according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Coordination Materials</b>		
<b>Mode of Instruction:</b> lecture		
<b>Language:</b> English		
<b>Contact Hours:</b> 3		

**Literature:**

- Joan Ribas Gisbert, Coordination Chemistry, Wiley-VCH
- Lutz H. Gade, Koordinationschemie, Wiley-VCH
- As well as selected reviews and journals articles cited on the slides

**Assigned Courses:**

**Coordination Materials** (lecture)

**Part of the Module: Coordination Materials (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Assigned Courses:**

**Coordination Materials (Tutorial)** (exercise course)

**Examination**

**Coordination Materials**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Coordination Materials

<b>Module PHM-0113: Advanced Solid State Materials</b>		ECTS Credits: 6
Version 1.0.0 (since WS10/11) Person responsible for module: Prof. Dr. Henning Höppe		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Repitition of concepts</li> <li>• Novel silicate-analogous materials</li> <li>• Luminescent materials</li> <li>• Pigments</li> <li>• Heterogeneous catalysis</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students are aware of correlations between composition, structures and properties of functional materials,</li> <li>• acquire skills to predict the properties of chemical compounds, based on their composition and structures,</li> <li>• gain competence to evaluate the potential of functional materials for future technological developments, and</li> <li>• will know how to measure the properties of these materials.</li> <li>• Integrated acquirement of soft skills</li> </ul>		
<b>Workload:</b> Total: 180 h 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literarture (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> Contents of the modules Chemie I, and Chemie II or Festkörperchemie (Bachelor Physik, Bachelor Materialwissenschaften)		
<b>Frequency:</b> each summer semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program

**Parts of the Module****Part of the Module: Chemical Physics I****Mode of Instruction:** lecture**Language:** English**Contact Hours:** 3**Learning Outcome:**

see module description

**Contents:**

- Basics of quantum chemical methods
  - Extended Hueckel method (EHM)
  - Modern quantum chemical methods of chemical physics
  - Application: exemplary calculations and interpretation of simple electronic structures
- Molecular symmetry and group theory
  - Symmetry operations and matrix transformations
  - Point groups
  - Reducible and irreducible representations
  - Character tables
  - Application: infrared- and raman-spectroscopy, NMR-spectroscopy
- The electronic structure of transition metal complexes
  - Ligand field theory and angular-overlap model (AOM)
  - The physical basics of the spectrochemical series
  - Molecular orbital theory of transition metal complexes
  - Application: UV/VIS-spectroscopy, molecular magnetism

<b>Module PHM-0052: Solid State Spectroscopy with Synchrotron Radiation and Neutrons</b>		ECTS Credits: 6
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Christine Kuntscher		
<b>Contents:</b> <ol style="list-style-type: none"> <li>1. Electromagnetic radiation: description, generation, detection [5]</li> <li>2. Spectral analysis of electromagnetic radiation: monochromators, spectrometer, interferometer [2]</li> <li>3. Excitations in the solid state: Dielectric function [2]</li> <li>4. Infrared spectroscopy</li> <li>5. Ellipsometry</li> <li>6. Photoemission spectroscopy</li> <li>7. X-ray absorption spectroscopy</li> <li>8. Neutrons: Sources, detectors</li> <li>9. Neutron scattering</li> </ol>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the basics of spectroscopy and important instrumentation and methods,</li> <li>• have acquired the skills of formulating a mathematical-physical ansatz in spectroscopy and can apply these in the field of solid state spectroscopy,</li> <li>• have the competence to deal with current problems in solid state spectroscopy autonomously, and are able to judge proper measurement methods for application.</li> <li>• Integrated acquirement of soft skills.</li> </ul>		
<b>Workload:</b> Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> basic knowledge in solid-state physics		
<b>Frequency:</b> annually	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Solid State Spectroscopy with Synchrotron Radiation and Neutrons</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3		
<b>Learning Outcome:</b> see module description		
<b>Contents:</b> see module description		

**Literature:**

- H. Kuzmany, Solid State Spectroscopy (Springer)
- N. W. Ashcroft, N. D. Mermin, Solid State Physics (Holt, Rinehart and Winston)
- J. M. Hollas, Modern Spectroscopy

**Part of the Module: Solid State Spectroscopy with Synchrotron Radiation and Neutrons (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Examination**

**Solid State Spectroscopy with Synchrotron Radiation and Neutrons**

oral exam / length of examination: 30 minutes

**Examination Prerequisites:**

Solid State Spectroscopy with Synchrotron Radiation and Neutrons

<b>Module PHM-0056: Ion-Solid Interaction</b>		ECTS Credits: 6
Version 1.0.0 (since WS09/10) Person responsible for module: apl. Prof. Dr. Helmut Karl		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Introduction (areas of scientific and technological application, principles)</li> <li>• Fundamentals of atomic collision processes (scattering, cross-sections, energy loss models, potentials in binary collision models)</li> <li>• Ion-induced modification of solids (integrated circuit fabrication with emphasis on ion induced phenomena, ion implantation, radiation damage, ion milling and etching (RIE), sputtering, erosion, deposition)</li> <li>• Transport phenomena</li> <li>• Analysis with ion beams</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the physical principles and the basic mechanisms of the interaction between particles and solid state bodies in the energy range of eV to MeV,</li> <li>• are able to choose adequate physical models for specific technological and scientific applications, and</li> <li>• have the competence to work extensively autonomously on problems concerning the interaction between ions and solid state bodies.</li> <li>• Integrated acquisition of soft skills.</li> </ul>		
<b>Workload:</b> Total: 180 h 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> Basic Courses in Physics I–IV, Solid State Physics, Nuclear Physics		
<b>Frequency:</b> annually	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Ion-Solid Interaction</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3		
<b>Learning Outcome:</b> see module description		
<b>Contents:</b> see module description

**Assigned Courses:**

**Ion-Solid Interaction** (lecture)

**Part of the Module: Ion-Solid Interaction (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Assigned Courses:**

**Ion-Solid Interaction (Tutorial)** (exercise course)

**Examination**

**Ion-Solid Interaction**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Ion-Solid Interaction

<b>Module PHM-0057: Physics of Thin Films</b>		ECTS Credits: 6
Version 1.0.0 (since WS09/10) Person responsible for module: Dr. German Hammerl		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Layer growth</li> <li>• Thin film technology</li> <li>• Analysis of thin films</li> <li>• Properties and applications of thin films</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know methods of thin film technology and material properties and applications of thin films,</li> <li>• have acquired skills of grouping the various technologies for producing thin layers with respect to their properties and applications, and</li> <li>• have the competence to deal with current problems in the field of thin film technology largely autonomously.</li> <li>• Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to interpret experimental results.</li> </ul>		
<b>Workload:</b> Total: 180 h 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> none		
<b>Frequency:</b> every 3rd semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Physics of Thin Films</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 4		
<b>Learning Outcome:</b> see module description		
<b>Contents:</b> see module description		
<b>Literature:</b> <ul style="list-style-type: none"> <li>• H. Frey, G. Kienel, Dünnschichttechnologie (VDI Verlag, 1987)</li> <li>• H. Wang, An Introduction to Physics and Technology of Thin Films (World Scientific Publishing, 1994)</li> <li>• M. Ohring, The Materials Science of Thin Films (Academic Press, 1992)</li> </ul>		

**Examination**

**Physics of Thin Films**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Physics of Thin Films

<b>Module PHM-0058: Organic Semiconductors</b>		ECTS Credits: 6
Version 1.0.0 (since WS09/10) Person responsible for module: Prof. Dr. Wolfgang Brütting		
<b>Contents:</b> Introduction <ul style="list-style-type: none"> <li>• Materials and preparation</li> <li>• Structural properties</li> <li>• Electronic structure</li> <li>• Optical and electrical properties</li> </ul> Devices and Applications <ul style="list-style-type: none"> <li>• Organic metals</li> <li>• Light-emitting diodes</li> <li>• Field-effect transistors</li> <li>• Solar cells and laser</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the basic structural and electronic properties of organic semiconductors as well as the essential function of organic semiconductor devices,</li> <li>• have acquired skills for the classification of the materials taking into account their specific features in the functioning of components,</li> <li>• and have the competence to comprehend and attend to current problems in the field of organic electronics.</li> <li>• Integrated acquirement of soft skills: practicing technical English, working with English specialist literature, ability to interpret experimental results</li> </ul>		
<b>Workload:</b> Total: 180 h 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> It is strongly recommended to complete the module solid-state physics first. In addition, knowledge of molecular physics is desired.		
<b>Frequency:</b> every 3rd semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Organic Semiconductors</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3		
<b>Learning Outcome:</b> see module description		

**Contents:**

see module description

**Literature:**

- A. Köhler, H. Bässler: Electronic Processes in Organic Semiconductors (Wiley-VCH)

**Assigned Courses:**

**Organic Semiconductors** (lecture)

**Part of the Module: Organic Semiconductors (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Assigned Courses:**

**Organic Semiconductors (Tutorial)** (exercise course)

**Examination**

**Organic Semiconductors**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Organic Semiconductors

<b>Module PHM-0060: Low Temperature Physics</b>		ECTS Credits: 6
Version 1.0.0 (since WS09/10) Person responsible for module: PD Dr. Reinhard Tidecks		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Thermodynamic fundamentals</li> <li>• Gas liquification</li> <li>• Properties of liquid helium</li> <li>• Cryogenic engineering</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the basic properties of matter at low temperatures and the corresponding experimental techniques,</li> <li>• have acquired the theoretical knowledge to perform low-temperature measurements,</li> <li>• and know how to experimentally investigate current problems in low-temperature physics.</li> </ul>		
<b>Workload:</b> Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study)		
<b>Conditions:</b> Physik IV - Solid-state physics		
<b>Frequency:</b> every 3rd semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Low Temperature Physics</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 3		
<b>Learning Outcome:</b> see module description		

**Contents:**

- Introduction
  - History, methods, realizations, and significance
- Thermodynamic fundamentals
  - Temperature, working cycles, real gases, Joule-Thomson-Effect
- Gas liquification
  - Air, hydrogen, helium
  - Separation of Oxygen and nitrogen
  - Storage and transfer of liquefied gases, superinsulation
- Properties of liquid helium
  - Production and thermodynamic properties of  $^4\text{He}$  and  $^3\text{He}$
  - Phase diagrams ( $^4\text{He}$ ,  $^3\text{He}$ )
  - Superfluidity of  $^4\text{He}$ 
    - Experiments, Two-Fluid-Model
    - Bose-Einstein-Condensation
    - Excitation spectrum, critical velocity
    - Rotating Helium
  - Normal and superfluid  $^3\text{He}$
  - $^4\text{He}$  /  $^3\text{He}$ -mixtures
- Cryogenic engineering
  - Bath-Cryostats (Helium-4, Helium-3),
  - $^4\text{He}$  /  $^3\text{He}$ -Dilution-Refrigerators
  - Pomeranchuk-Cooling
  - Adiabatic demagnetization
  - Primary and secondary thermometers

**Literature:**

- C. Enss, S. Hunklinger, Tieftemperaturphysik (Springer)
- F. Pobell, Matter and Methods at Low Temperatures (Springer)

**Part of the Module: Low Temperature Physics (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Examination**

**Low Temperature Physics**

oral exam / length of examination: 30 minutes

**Examination Prerequisites:**

Low Temperature Physics

<b>Module PHM-0066: Superconductivity</b>		ECTS Credits: 6
Version 1.0.0 (since WS11/12) Person responsible for module: PD Dr. Reinhard Tidecks		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Introductory Remarks and Literature</li> <li>• History and Main Properties of the Superconducting State, an Overview</li> <li>• Phenomenological Thermodynamics and Electrodynamics of the SC</li> <li>• Ginzburg-Landau Theory</li> <li>• Microscopic Theories</li> <li>• Fundamental Experiments on the Nature of the Superconducting State</li> <li>• Josephson-Effects</li> <li>• High Temperature Superconductors</li> <li>• Application of Superconductivity</li> </ul>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• will get an introduction to superconductivity,</li> <li>• by a presentation of experimental results they will learn the fundamental properties of the superconducting state,</li> <li>• are informed about the most important technical applications of superconductivity.</li> <li>• Special attention will be drawn to the basic concepts of the main phenomeno-logical and microscopic theories of the superconducting state, to explain the experimental observations.</li> <li>• For self-studies a comprehensive list of further reading will be supplied.</li> </ul>		
<b>Workload:</b> Total: 180 h 60 h lecture and exercise course (attendance) 80 h studying of course content through exercises / case studies (self-study) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study)		
<b>Conditions:</b> <ul style="list-style-type: none"> <li>• Physik IV – Solid-state physics</li> <li>• Theoretical physics I-III</li> </ul>		
<b>Frequency:</b> every 3rd semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Superconductivity</b> <b>Mode of Instruction:</b> lecture <b>Language:</b> English <b>Contact Hours:</b> 4		
<b>Learning Outcome:</b> see module description		
<b>Contents:</b> see module description		

**Literature:**

- W. Buckel, Supraleitung, 5. Auflage (VCH, Weinheim, 1994)
- W. Buckel und R. Kleiner, Supraleitung, 6. Auflage (WILEY-VCH, Weinheim, 2004)

<b>Mode of Instruction:</b> lecture		
<b>Language:</b> English		
<b>Contact Hours:</b> 3		
<b>Learning Outcome:</b> see module description		
<b>Contents:</b> see module description		
<b>Literature:</b> to be announced at the beginning of the lecture		

---

**Part of the Module: Applied Magnetic Materials and Methods (Tutorial)**

**Mode of Instruction:** exercise course

**Language:** English

**Contact Hours:** 1

**Examination**

**Applied Magnetic Materials and Methods**

oral exam / length of examination: 30 minutes

**Examination Prerequisites:**

Applied Magnetic Materials and Methods

<b>Module PHM-0114: Porous Functional Materials</b>		ECTS Credits: 6
Version 1.0.0 (since SS11) Person responsible for module: Prof. Dr. Dirk Volkmer		
<b>Contents:</b> <ul style="list-style-type: none"> <li>• Overview and historical developments</li> <li>• Structural families of porous frameworks</li> <li>• Structure Determination and Computer Modelling</li> <li>• Synthesis strategies</li> <li>• Adsorption and diffusion</li> <li>• Thermal analysis methods</li> <li>• Catalytic properties</li> <li>• Advanced applications and current trends</li> </ul>		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students shall acquire knowledge about design principles and synthesis of porous functional materials,</li> <li>• broaden their capabilities to characterize porous solid state materials with special emphasis laid upon sorption and thermal analysis,</li> <li>• become introduced into typical technical applications of porous solids.</li> <li>• Integrated acquirement of soft skills</li> </ul>		
<b>Remarks:</b> Subsequent to the lecture course, the students can take part in a hands-on method course ``Porous Materials Synthesis and Characterization" to practice their knowledge.		
<b>Workload:</b> Total: 180 h 20 h studying of course content using literature (self-study) 20 h studying of course content using provided materials (self-study) 80 h studying of course content through exercises / case studies (self-study) 60 h lecture and exercise course (attendance)		
<b>Conditions:</b> participation in the course Materials Chemistry		<b>Credit Requirements:</b> one written examination, 90 min
<b>Frequency:</b> each winter semester	<b>Recommended Semester:</b> from 1.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Porous Functional Materials</b>		
<b>Mode of Instruction:</b> lecture		
<b>Language:</b> English		
<b>Contact Hours:</b> 4		
<b>Contents:</b> see module description		
<b>Literature:</b> <ul style="list-style-type: none"> <li>• Paul A. Wright, Microporous Framework Solids (RSC Materials Monographs, 2008)</li> <li>• selected reviews and journal articles cited on the slides</li> </ul>		

**Examination**

**Porous Functional Materials**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Porous Functional Materials

<b>Module PHM-0166: Carbon-based functional Materials (Carboceramics)</b>		ECTS Credits: 6
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
<b>Contents:</b> <ol style="list-style-type: none"> <li>1. Introduction to carbon allotropes and porous carbon materials [4]</li> <li>2. Physical properties of fullerenes, carbon nanotubes and graphene [4]</li> <li>3. Solid state NMR spectroscopy of carbon materials [4]</li> <li>4. Metal carbides [4]</li> <li>5. Carbon thin films and coatings [4]</li> <li>6. Manufacturing and processing technology of carbon fibres [4]</li> <li>7. Carbon-fibre reinforced polymer composites [4]</li> <li>8. Carbon-fibre reinforced aluminium (Metal Matrix Composites, MMC) [4]</li> <li>9. Energy storage in carbon materials [4]</li> <li>10. Carbon-based materials for opto-electronics [4]</li> <li>11. Quantum transport phenomena relating to carbon materials [4]</li> <li>12. a) Manipulating heat flow with carbon-based electronic analogs: phononics in place of electronics [2]</li> <li>12. b) Carbon-based spintronics [2]</li> <li>13. Fabrication and processing of carbon-based nanostructures [4]</li> </ol>		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the basics of the chemistry and physics of carbon materials and their applications,</li> <li>• acquire knowledge about the structural characterization, physical properties and engineering of functional materials and carbon based devices,</li> <li>• learn to work with specialist literature in english.</li> </ul>		
<b>Workload:</b> Total: 180 h 60 h lecture and exercise course (attendance) 20 h studying of course content using provided materials (self-study) 20 h studying of course content using literature (self-study) 80 h studying of course content through exercises / case studies (self-study)		
<b>Conditions:</b> none

**Parts of the Module**

**Part of the Module: Carbon-based functional Materials (Carboterials)**

**Mode of Instruction:** lecture

**Language:** English

**Contact Hours:** 4

**Literature:**

will be announced by the lecturers

**Assigned Courses:**

**Carbon-based functional Materials (Carboterials)** (lecture)

**Examination**

**Carbon-based functional Materials (Carboterials)**

written exam / length of examination: 120 minutes

**Examination Prerequisites:**

Carbon-based functional Materials (Carboterials)

<b>Module PHM-0184: Sustainable Resource Management</b>		ECTS Credits: 6
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Armin Reller		
<b>Learning Outcomes / Competences:</b> <ul style="list-style-type: none"> <li>• The students know the basics of geographic distribution and the technical relevancy of different resources like energy sources and metals.</li> <li>• Furthermore, the students know risk management methods, which are used to identify, measure and manage resource price risks. For this purpose, resource scarcity indicators, risk measures and instruments for risk protection are being presented, which enable the students to make economically well-grounded decisions in dealing with resources.</li> <li>• Moreover, the students know how resource-based strategies with the help of environmental management contribute to environmental risk management. All topics are being illustrated with examples (from practical projects).</li> </ul>		
<b>Remarks:</b> Elective Module		
<b>Workload:</b> Total: 180 h 140 h studying of course content using provided materials (self-study) 40 h seminar (attendance)		
<b>Conditions:</b> none		<b>Credit Requirements:</b> 1 written report on selected questions of sustainable resource management (number of pages: approx. 15 - 20; editing time 2 weeks), oral presentation (30 minutes), compulsory attendance (40 hours)
<b>Frequency:</b> irregular (usu. summer semester)	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

<b>Parts of the Module</b>
<b>Part of the Module: Sustainable Resource Management</b> <b>Mode of Instruction:</b> seminar <b>Lecturers:</b> Prof. Dr. Armin Reller <b>Language:</b> English <b>Frequency:</b> each summer semester <b>Contact Hours:</b> 2 <b>ECTS Credits:</b> 4

**Contents:**

1. Introduction (global resource consumption)
2. Overview of resource types
3. Definition of mineral resources
4. Introduction to resource management
5. Identification of resource price risks
6. Measurement of resource price risks
7. Management of resource price risks
8. Introduction in basics of environmental management
9. Corporate environmental management
10. Economical closed-loop systems

**Examination**

**Sustainable Resource Management**

seminar

**Examination Prerequisites:**

Sustainable Resource Management

**Description:**

1 written report (number of pages: approx. 15 - 20; editing time 2 weeks), oral presentation (30 minutes), compulsory attendance (40 hours)

<b>Module PHM-0145: Practical Laboratory Project</b>		ECTS Credits: 6
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
<b>Contents:</b> Experimental or theoretical work in a laboratory / research group in the Institute of Physics. Has to be conducted within 3 months.		
<b>Learning Outcomes / Competences:</b> The students: <ul style="list-style-type: none"> <li>• know the basic terms, skills and concepts to pursue a real research project in the existing laboratories within the research groups,</li> <li>• experience the day to day life in a research group from within,</li> <li>• prepare themselves to conduct a research project during their Masters thesis.</li> </ul>		
<b>Remarks:</b> <b>ELECTIVE COURSE</b>		
<b>Workload:</b> Total: 180 h		
<b>Conditions:</b> Recommended: solid knowledge in (solid state) Physics, Chemistry and Materials Science, both experimentally and theoretically		<b>Credit Requirements:</b> 1 written report (editing time 2 weeks)
<b>Frequency:</b> each semester	<b>Recommended Semester:</b> from 3.	<b>Minimal Duration of the Module:</b> 0 semester[s]
<b>Contact Hours:</b> 1	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	
<b>Parts of the Module</b>		
<b>Part of the Module: Practical Laboratory Project</b>		
<b>Language:</b> English		
<b>Literature:</b> <ul style="list-style-type: none"> <li>• Various</li> </ul>		

<b>Module PHM-0196: Surfaces and Interfaces II: Joining processes</b>		ECTS Credits: 6
Version 1.1.0 (since WS15/16) Person responsible for module: Prof. Dr. Siegfried Horn Dozenten: Prof. Dr. Siegfried Horn, Dr. Judith Moosburger-Will		
<b>Learning Outcomes / Competences:</b> The students - know the application areas of composite materials - know the basics of cohesion and adhesion - know the basics of joining techniques - are introduced to physical and chemical properties metal-metal, metal-polymer and polymer-polymer interfaces - Are able to independently acquire further knowledge of the scientific topic using various forms of information.		
<b>Workload:</b> Total: 180 h		
<b>Conditions:</b> Basic knowledge on materials science, lecture "Surfaces and Interfaces I" Module Surfaces and Interfaces (PHM-0117) - recommended		<b>Credit Requirements:</b> Bestehen der Modulprüfung
<b>Frequency:</b> each summer semester	<b>Recommended Semester:</b> from 2.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 4	<b>Repeat Exams Permitted:</b> any	
<b>Parts of the Module</b>		
<b>Part of the Module: Surfaces and Interfaces II: Joining processes</b> <b>Mode of Instruction:</b> lecture <b>Lecturers:</b> Prof. Dr. Siegfried Horn <b>Language:</b> German <b>Contact Hours:</b> 3		
<b>Contents:</b> The following topics are treated: - Introduction to adhesion - Role of surface and interface properties - Introduction to interactions at surfaces and interfaces - Adhesion theories - Surface and interface energy - Surface treatment techniques - Joining techniques - Physical and chemical properties of joints - Applications		
<b>Literature:</b> Literature, including actual scientific papers and reviews, will be announced at the beginning of the lecture.		
<b>Assigned Courses:</b> <b>Surfaces and Interfaces II: Joining processes</b> (lecture)		

**Examination**

**Surfaces and Interfaces II: Joining processes**

written exam / length of examination: 90 minutes

**Examination Prerequisites:**

Surfaces and Interfaces II: Joining processes

**Parts of the Module**

**Part of the Module: Übung zu Surfaces and Interfaces II: Joining processes**

**Mode of Instruction:** exercise course

**Language:** German

**Contact Hours:** 1

**Assigned Courses:**

**Übung zu Surfaces and Interfaces II: Joining processes** (exercise course)

<b>Module PHM-0169: Masterthesis</b>		ECTS Credits: 26
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
<b>Contents:</b> According to chosen topic		
<b>Remarks:</b> <b>COMPULSORY MODULE</b>		
<b>Workload:</b> Total: 780 h 260 h studying of course content using provided materials (self-study) 520 h lecture and exercise course (attendance)		
<b>Conditions:</b> To begin with the Masterthesis students must have acquired 72 CP from modules consisting of the modulgroups 1a - 5. Recommended: according to the respective advisor		<b>Credit Requirements:</b> written thesis
<b>Frequency:</b> each semester	<b>Recommended Semester:</b> from 4.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 1	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program	

<b>Parts of the Module</b>
<b>Part of the Module: Masterthesis</b>
<b>Language:</b> English
<b>Learning Outcome:</b> see description of module
<b>Contents:</b> see description of module

<b>Examination</b>
<b>Masterthesis</b> Master's thesis
<b>Examination Prerequisites:</b> Masterthesis

<b>Module PHM-0170: Colloquium</b>		ECTS Credits: 4
Version 1.0.0 (since SoSe15) Person responsible for module: Prof. Dr. Dirk Volkmer		
<b>Contents:</b> According to the respective Masterthesis		
<b>Remarks:</b> <b>COMPULSORY MODULE</b>		
<b>Workload:</b> Total: 120 h 80 h lecture and exercise course (attendance) 40 h studying of course content using provided materials (self-study)		
<b>Conditions:</b> submission of the masterthesis		
<b>Frequency:</b> each semester	<b>Recommended Semester:</b> from 4.	<b>Minimal Duration of the Module:</b> 1 semester[s]
<b>Contact Hours:</b> 1	<b>Repeat Exams Permitted:</b> according to the examination regulations of the study program
