für den Masterstudiengang

Materialwissenschaften

Stand: 11.01.2012

Content

I. Objectives and Profile of the Program

Priorities in the activity of the materials scientist are applied research in science and technology, the development of modern materials, supervision of production processes and the technical distribution of materials. Also, the program aims towards well trained graduates to perform organizational, planning and management duties in research institutes, industry and public administration.
The structure of typical operational areas of material scientists requires a broad knowledge and education in natural sciences that will enable him / her to solve new and not yet resolved problems of applied research and technology.
A solid background in the manufacture and processing, characterization, development and use of new materials is a key parameter in the education. In addition to good knowledge of the physical and chemical principles, materials scientists have to have a profound background of the various classes of materials and must be well acquainted with the fundamentals and problems of materials technology. For this purpose he / she must have a thorough knowledge of various processing, fabrication and analysis methods and has to be able to recognize the essentials.
The Masters degree in Materials Science is ment to supplement the Bachelor's degree in the form of an in-depth recessment to achieve a second professional and qualifying status, and provides the opportunity to work and excel in an experimental environment, general materials science, and selected specialty areas. It provides important practice skills to pursue academic work in industrial or governmental research and development.
The Masters degree provides a professional and qualifying education in material science, usually based upon a successful Bachelor's degree. Holding a Master's degree, it is secured that the candidate is in power of an enhanced expertise in material sciences and has the ability, by using modern scientific methods to tackle materials Science problems independently and efficiently.

The master program consists of the following module groups. The respective Credit Points (LP) and the respective work load hours (SWS) are indicated.

Module		SWS	CP
1	Fundamentals of Materials Science	15	23
2	Methods in Materials Science	23	33
3	Materials Science Seminar	2	4
4	Specialization in Materials Science	20	30
5	Finals		30

The total of credentials is 120 credit points.

The anticipated learning outcomes in the Masters program go far beyond the ones of the Bachelor's degree program. The following technical and social knowledge, skills and competencies are essential for the professional qualification of the Masters Graduates:

• The graduates have sound working knowledge of scientific fundamentals of materials science, good knowledge of mathematics (in terms of its application to scientific problems), and practical skills in modern materials research. Based on this knowledge, they are able to identify relations between materials science and various economic issues.

• Generally, they are well prepared for demanding tasks, whose processing goes well beyond a schematic application of existing concepts only. They are moreover able to analyze and deliberately modify the tasks according to the respective needs. They have acquired a wide range of material knowledge, scientific methods and techniques and are qualified to use these accordingly and well adaptedto the specific problem.

• The graduates have an understanding of the impact of their activities as material scientists in a company, including resource and environmental issues and are aware of their own scientific and social responsibilities.

• The graduates are able to judge and understand the effects of their actions as materials scientists and to estimate their impact on social, environmental and society issues. They have accquired an awareness for resource management and smart resource handling.

• The program graduates are able to work in a variety of scientific and technical surroundings to organize and carry out projects in several different areas. They are familiar with the learning strategies that lead them and others to professional and social competences and they know how to make this anongoing and deepening process.

• They are able to appropriately present both their own results as well as general questions of modern materials research in front of professional colleagues as well as to the broader public.

• They are prepared for flexible use in various professional fields around and in particular on the work in an occupational or academic field. Sucessful graduates are well prepared to follow an appropriate PhD program.

Social skills are acquired primarily integrated into the specialized modules, such as team skills in exercises and in internships and project organization during the final thesis work. The Master's degree Materials Science is an international program, the teaching language of the courses is English.

II. Official Documents

The international Masters program, Materials Science' was officially opened to students in the winter term 2003/04. The actual examination regulation was enacted on 25. July 2007. It may be downloaded at

http://www.zv.uni-augsburg.de/de/sammlung/download/

or

http://www.physik.uni-augsburg.de/studium/

III. Module summary

The responsible module appointees are named in brackets.

Abbreviations:

SWS = Semester work load, CP = credit points
V = lecture, Ü = exercise, P = Prakticum, S = Seminar

Module Group	Module	Signature	SWS	CP
1 Basics of Materials Science				
	Compulsory Modules: Materials Physics I (Stritzker)	MaMawi-11-01	3 V, 1 Ü	6
	Materials Physics II (Stritzker)	MaMawi-12-01	3 V, 1 Ü	6
	Materials Chemistry (Volkmer)	MaMawi-13-01	3 V, 1 Ü	6
	Physics of Surfaces and Interfaces (Horn)	MaMawi-14-01	3 V, 1 Ü	5
		subtotal	16	23
2 Methods in Materials Science	**Compulsory Modules:** Characterization of materials (Haider)	MaMawi-21-01	4 V	6
	Processing of materials (Haider)	MaMawi-22-01	3 V	5
	Theoretical Concepts and Simulation (Schuster)	MaMawi-23-01	3 V, 1 Ü	6
	Elective Modules:			
	Method Course: Electron Microscopy (Haider)	MaMawi-24-02	4 V, 2 P	8
	Method Course: Electronics for Physicists and Materials Scientists (Wixforth)	MaMawi-24-04	3 V, 3 P	8
	Method Course: Materials Synthesis (Scherer)	MaMawi-24-05	2 V, 4 P	8
	Method Course: Methods in Biophysics (Thalhammer)	MaMawi-24-06	4 V, 1 P	8
	Method Course: Optical Properties of Solids (Loidl)	MaMawi-24-07	2 V, 4 P	8
	Method Course: Spectroscopy on Condensed Matter (Loidl)	MaMawi-24-09	2 V, 4 P	8
	Method Course: Thin Film Analysis with Ion Beams (Karl)	MaMawi-24-11	2 V, 4 P	8
	Method Course: X-ray and Neutron Diffraction Techniques (mit Exkursion) (Scherer)	MaMawi-24-12	2 V, 4 P	8
	Method Course: Solid State Synthesis Lab (Volkmer)	MaMawi-24-13	2 V, 4 P	8
	Method Course: Semiconductor and surface acoustic wave devices (Krener)	MaMawi-24-14	4 V, 1 P	8
	Method Course: Characterization of Porous Materials (Volkmer)	MaMawi-24-15	2 V, 4 P	8
		subtotal	22	33
3 Materials Science Seminar				
	Compulsory Module: Introduction to Materials (Haider)	MaMawi-31-01	2 S	4
		subtotal	2	4

4 Specialization in Materials Science				
	5 Elective Courses according to postings of examination board			
	Physics and Technology of Semiconductor Devices (Wixforth)	MaMawi-41-01	3 V, 1 Ü	6
	Nanostructures / Nanophysics (Wixforth)	MaMawi-41-02	3 V, 1 Ü	6
	Electronics for Physicists and Materials Scientists (Wixforth)	MaMawi-41-03	3 V, 1 P	6
	Biophysics and Biomaterials (Thalhammer)	MaMawi-41-04	4	6
	Solid State Spectroscopy with Synchrotron Radiation (Kuntscher)	MaMawi-41-05	3 V, 1 Ü	6
	Chemische Physik I (Scherer)	MaMawi-41-06	3 V, 1 Ü	6
	Chemische Physik II (Scherer)	MaMawi-41-07	3 V, 1 Ü	6
	Ion-Solid Interaction (Karl)	MaMawi-41-08	3 V, 1 Ü	6
	Physics of Thin Films (Brütting)	MaMawi-41-09	4 V	6
	Organic Semiconductors (Brütting)	MaMawi-41-10	4 V	6
	Magnetism (Krug von Nidda)	MaMawi-41-11	3 V, 1 Ü	6
	Low Temperature Physics (Mannhart)	MaMawi-41-12	3 V, 1 Ü	6
	Spintronics (Mannhart)	MaMawi-41-13	4 V	6
	Materials Synthesis (Scherer)	MaMawi-41-14	3 V, 1 Ü	6
	Oxidation and Corrosion (Haider)	MaMawi-41-15	4 V, 1 Ü	6
	Seminar on Glass Physics (Lunkenheimer)	MaMawi-41-16	2 S	4
	Advanced Solid State Materials (Höppe)	MaMawi-41-17	3 V, 1 Ü	6
	Porous Materials (Volkmer)	MaMawi-41-18	3 V, 1 Ü	6
	Superconductivity (Tidecks)	MaMawi-41,19	3 V, 1 Ü	6
	Sustainable Resource Management (Rathgeber, Reller)	MaMawi-41-20	2 V, 2 Ü	6
	Practical Laboratory Project (Chairman of Examination Board)	MaMawi-42-01	4 V	6
5 Finals				
	Masters Thesis (6 months) (Wixforth)	MaMawi-91-01		26
	Final Colloquium (Wixforth)	MaMawi-91-02		4
		subtotal		30
		Total		**120**

Module description	**Materials Physics II**
Signature	MaMawi-12-01, MaAFM-12-01, MaPhy-42-02
Semester and recurrence	2nd Semester / each summer term
Responsible for module	Prof. Dr. Stritzker
Lecturer	Prof. Dr. Stritzker (SS 2011)
Language	English
Curriculum inclosures	Master Materialwissenschaften, Master Advanced Functional Materials, Master Physik (Wahl)

Lecture type and hours

Type	*SWS*	*Group size*
lectures	3	30-40
tutorial	1	30-40

Work load (hours)

	Presence	*Self-study*	*Total*
Lectures	45	55	100
Tutorial	15	35	50
Homework		30	30
			180

Credit points	6
Prerequisites acc. to the regulations of study	None
Recommended prere-quisites	None

Acquired skills and knowledge

Die Studierenden

- kennen die grundlegenden physikalischen und chemischen Ursachen für die daraus resultierenden unterschiedlichen Materialeigenschaften,
- sind in der Lage, Materialien hinsichtlich ihrer magnetischen, supraleitenden, thermischen und Transporteigenschaften zu charakterisieren und, im Rahmen einfacher Modelle, entsprechende Berechnungen durchzuführen und
- besitzen die Kompetenz, wissenschaftliche Fragestellungen aus den genannten Bereichen weitgehend selbständig zu bearbeiten.

Content

1. Magnetic materials [4]
   - 1.1. Magnetization
   - 1.2. Atomic origin of magnetic moments
   - 1.3. Paramagnetism
   - 1.4. Ferromagnetism
   - 1.5. Anisotropy
   - 1.6. Ferromagnetic materials, hard and soft magnets
   - 1.7. Magnetooptics
2. Superconductivity [4]
   - 2.1. Basic phenomena
   - 2.2. Meissner effect
   - 2.3. Energy gap
   - 2.4. London equation
   - 2.5. Basic ideas of the BCS theory, Cooper pairs
   - 2.6. Type I/II superconductors
   - 2.7. High T_c superconductors
   - 2.8. Superconducting materials, flux pinning
3. Thermodynamics of materials [7]
   - 3.1. Review of basic terms
   - 3.2. Equilibrium conditions
   - 3.3. Phase diagrams
   - 3.4. Multiphase-multicomponent equilibria
   - 3.5. Thermodynamics of point defects
   - 3.6. Thermodynamics of interfaces
4. Thermal Properties [4]
   - 4.1. Specific Heat
   - 4.2. Thermal Expansion
   - 4.3. Thermal Transport
   - 4.4. Thermal Radiation
   - 4.5. Thermoelectricity

	5. Atomic transport [3] 5.1. Diffusion 5.2. Electro-, thermo-, stress migration
Requirements for credits	1 written examination, 90 min
Media and methods	Beamer presentation, blackboard (occasionally)
Literature	● Charles Kittel: Introduction to Solid State Physics (Wiley & Sons) ● Werner Buckel und Reinhold Kleiner: Supraleitung (Wiley-VCH)
Further information	-

Module description	**Materials Chemistry**
Signature	MaMawi-13-01, MaAFM-13-01, MaPhy-41-04, MaPhy-42-06
Semester and recurrence	1st semester (each winter term)
Responsible for module	Prof. Dr. Volkmer
Lecturer	Prof. Dr. Volkmer
Language	english
Curriculum inclosures	Master Materials Science (compulsory module), Master Physics with minor subject Chemistry (elective module), Master AFM (compulsory module)

Lecture type and hours

type	*SWS*	*Group size*
lectures	3	20-30
tutorial	1	20-30

Work load (hours)

	Presence time	*Self-study*	*Total*
lectures	45	30	75
tutorial	15	60	75
homework		30	30
			180

Credit points	6 LP
Prerequisites acc. to the regulations of study	none
Recommended prerequisites	The lecture course is based on the courses Chemistry I and Chemistry II.
Acquired skills and knowledge	● The students shall acquire knowledge about concepts of chemical bonding in coordination chemistry (main emphasis: d-block transition metal compounds) ● Broaden their capabilities to interpret UV/vis absorption spectra and to predict stability and reactivity of coordination compounds ● learn how to transfer concepts of coordination chemistry onto topics of materials sciences
Content	● Historical development of coordination chemistry [1] ● Structures and nomenclature rules [2] ● Chemical bonds in transition metal coordination compounds [3] ● Stability of transition metal compounds [2] ● Characteristic reactions [4] ● Coordination polymers / metal-organic frameworks [2] ● Cluster compounds [2] ● Functional materials [2] ● Bioinorganic chemistry [2] ● Coordination compounds in medical applications [1]
Requirements for credits	1 written examination, 90 min
Media and methods	Beamer presentation, blackboard (occasionally)
Literature	• *Coordination Chemistry*, Joan Ribas Gispert, Wiley-VCH • Lutz H. Gade, *Koordinationschemie*, Wiley-VCH *As well as selected reviews and journal articles cited on the slides*
Further information	-

Module description	**Physics of Surfaces and Interfaces**
Signature	MaMawi-14-01; MaAFM-14-01; MaPhy-42-03
Semester and recurrence	2nd semester / every year
Responsible for module	Prof. Dr. Horn
Lecturer	Prof. Dr. Haider (SS 2011)
Language	englisch
Curriculum inclosures	Master Materials Science; Master AFM; Master Physics (elective module)

Lecture type and hours	*Type*	*SWS*	*Group size*
	lectures	3	bis zu 40
	tutorial	1	bis zu 20

Work load (hours)		*Presence*	*Self-study*	*Total*
	lectures	45	45	90
	tutorial	15	45	60
	homework		30	30
				180

Credit points	5
Prerequisites acc. to the regulations of study	none
Recommended prerequisites	Das Modul Experimentelle Festkörperphysik oder das Modul Theoretische Festkörperphysik sollte zuerst absolviert werden.
Acquired skills and knowledge	Die Studierenden ● haben Kenntnisse der Struktur, der elektronischen Eigenschaften, der Thermodynamik sowie des chemischen Reaktionsverhaltens an Ober- und Grenzflächen, ● haben die Fertigkeit, ihre Kenntnisse auf Problemstellungen der Grundlagenforschung und der angewandten Forschung auf dem Gebiet der Physik von Ober- und Grenzflächen anzuwenden, ● und besitzen die Kompetenz, basierend auf den vermittelten physikalischen Grundlagen eigenständig Lösungsansätze für entsprechende Problemstellungen zu erarbeiten.
Content	I. Introduction [1] 1. The importance of surfaces and interfaces II. Some basic facts from solid state physics [3] 1. Crystal lattice and reciprocal lattice 2. Elektronic structure of solids 3. Lattice dynamics III. Physics at surfaces and interfaces [14] 1. Structure of ideal and real surfaces 2. Relaxation and reconstruction 3. Transport (diffusion, elektronic) on interfaces 4. Thermodynamics of interfaces 5. Elektronic structure of surfaces 6. Chemical reactions on solid state surfaces (catalysis) 7. Interface dominated materials (nano scale materials) IV. Methods to study chemical composition and electronic structure, application examples [4] 1. Scanning electron microscopy 2. Scanning tunneling and scanning force microscopy 3. Auger – electron – spectroscopy 4. Photo electron spectroscopy
Requirements for credits	1 written examination, 90 min

Media and methods	-
Literature	● Ertl, Küppers: Low Energy Electrons and Surface Chemistry (VCH) ● Lüth: Surfaces and Interfaces of Solids (Springer) ● Zangwill: Physics at Surfaces (Cambridge) ● Feldmann, Mayer: Fundamentals of Surface and thin Film Analysis (North Holland) ● Henzler, Göpel: Oberflächenphysik des Festkörpers (Teubner) ● Briggs, Seah: Practical Surface Analysis I und II (Wiley)
Further information	

2. Methods in Materials Science

Module description	**Characterization of Materials**
Signature	MaMawi-21-01, MaAFM-21-01
Semester and recurrence	1st or 3rd semester / each winter term
Responsible for module	Prof. Dr. Haider
Lecturer	
Language	english
Curriculum inclosures	Master Materials Science (compulsory module); Master Advanced Functional Materials

Lecture type and hours	*Type*	*SWS*	*Group size*
	lectures	4	30
	tutorial	0	0

Work load (hours)		*Presence*	*Self-study*	*Total*
	lectures	60	60	120
	tutorial			
	exam		60	60
				180

Credit points	6
Prerequisites acc. to the regulations of study	none
Recommended prere-quisites	Grundkenntnisse der Materialwissenschaften
Acquired skills and knowledge	Den Studierenden wird im Rahmen einer Ringvorlesung in jeweils 4 SWS grundlegende Charakterisierungsmethoden vorgestellt. Die Studierenden ● kennen die grundlegenden Charakterisierungsmethoden der Materialwissenschaften, ● verfügen über Kenntnisse der Einsatzmöglichkeiten dieser Methoden, ● besitzen Kompetenzen, diese Techniken zur Untersuchung der strukturellen, chemischen, elektronischen, magnetischen und optischen Eigenschaften von Materialen einzusetzen.
Content	• X-ray diffraction [2] • Mechanical characterisation [2] • Optical methods [2] • Elektrical mearsurements and characterisation [2] • NMR spectroscopy [2] • Spectroscopy using synchrotron radiation[2] • Thermal analysis [2] • Ion beam methods [2] • Charakterisation of organic systems [2] • Elektron microscopy [2] • (Stand: Wintersemester 2009/2010)
Requirements for cre-dits	1 written examination, 90 min
Media and methods	Vorlesung: Folien/Tafelvortrag mit Medienunterstützung Selbststudium
Literature	Wird von den einzelnen Dozenten themenspezifisch genannt
Further information	

Module description	**Processing of Materials**
Signature	MaMawi-22-01; MaAFM-22-01, MaPhy-42-05
Semester and recurrence	2nd / summer term
Responsible for module	Prof. Dr. Haider
Lecturer	Prof. Dr. Haider Prof. Dr. Horn Prof. Dr. Ruhland Prof. Dr. Stritzker Prof. Dr. Wixforth (SS 2011)
Language	english
Curriculum inclosures	Master of Materials Science (compulsory module), Master Advanced Functional Materials, Master Physics

Lecture type and hours	*Type*	*SWS*	*Group size*
	Vorlesung	3	

	Presence time	*Self-study*	*Total*
Vorlesung	56	56	112
Klausur	2	40	42
			154

	5
Work load (hours)	none
	Grundkenntnisse der Materialwissenschaften
Acquired skills and knowledge	Die Studierenden • kennen die wichtigsten Methoden der Materialbe- und -verarbeitung für die unterschiedlichen Klassen von Materialien – Halbleiter, Dünnschichtmaterialien, Polymere, Metalle, Verbundmaterialien, • beherrschen neben industriellen Verfahren auch Methoden, die bislang eher im Labormassstab realisisert sind und • besitzen die Kompetenz, aktuelle Problemstellungen aus dem obengenannten Themenbereich selbständig zu bearbeiten.
Content	1. Processing of Polymers 1.1. Introduction to Polymers 1.2. Mechanical Behavior of Polymers 1.3. Rheology of Polymer Melts 1.4. Extrusion 1.5. Mixing 1.6. Injection Molding 1.7. Secondary Shaping (Fibers, Films) 1.8. Other Important Polymer Processes 1.9. (Calendering, Coating, Foaming…) 2. Processing of Composite materials 2.1. Production and properties of 2.1.1. glass fibers 2.1.2. ceramic fibers 2.1.3. carbon fibers 2.2. Production and properties of fiber reinforced materials 2.2.1. carbon reinforced polymers 2.2.2. glass fiber reinforced polymers 2.2.3. carbon fiber reinforced ceramics 2.2.4. ceramic fiber reinforced ceramics 2.3. Fields of aplications 3. Processing of Thin Films 3.1. Thin Film Deposition: 3.1.1. Laserablation 3.1.2. Ionimplantation 3.1.3. Plasma Immersion-Ionimplantation 3.1.4. Microwave Plasma CVD

	3.2. Thin Film Characterization: 3.2.1. Ion Beam Techniques 3.2.2. Electron Microscopy 3.2.3. X-ray Diffraction 3.2.4. Scanning Microscopy 3.2.5. Magnetooptics 3.2.6. Optical, electrical, mechanical Properties 4. Processing of Semiconductors 4.1. crystal growth and epitaxy 4.1.1. crystal growth techniques,molecular beam-, liquid phase- and gas phase epitaxy, surface preparation 4.2. oxidation and lithography 4.2.1. thermal and pyrolithic oxidation 4.2.2. optical lithography, fabrication of photo masks 4.3. etching processes 4.4. doping and contacting 4.4.1. diffusion doping, masking with oxide layers, ion implantation, fabrication of ohmic contacts 4.5. complete processes 4.5.1. process steps for fabrication of planar devices and integrated circuits 4.6. cleanrooms 4.6.1. concepts, cleanroom classes, requirements for cleanrooms 5. Processing of Metals and Alloys 5.1. Basics 5.1.1. characteristics of metals 5.1.2. plastic deformation 5.1.3. thermodynamics 5.1.4. diffusion 5.2. thermal processing: 5.2.1. solidification 5.2.2. rapid solidification 5.2.3. casting techniques 5.2.4. soldering, welding 5.3. forming processes 5.3.1. cold forming 5.3.2. hot forming, forging 5.3.3. thixoforming 5.3.4. cutting, milling 5.3.5. ECAP, SPD 5.4. Thermal processes 5.4.1. annealing, age hardening 5.4.2. recovery and recrytallization 5.4.3. sintering 5.5. Miscellanous 5.5.1. Nanocrystals 5.5.2. metallic foams 5.5.3. metal matrix composites
Requirements for credits	1 written examination, 90 min
Media and methods	Vorlesung: Powerpointpräsentationen
Literature	M. Ohring, Materials science of thin films (Academic Press) H. E. H. Meijer (ed.), Processing of polymers (Wiley-VCH) K. A. Jackson, Processing of semiconductors (VCH) M. Stuke, Materials surface processing (Elsevier) R. W. Cahn, Processing of metals and alloys (VCH)

Module description	**Theoretical Concepts and Simulation**
Signature	MaMawi-23-01; MaAFM-23-01
Semester and recurrence	2nd semester / each summer term
Responsible for module	Dr. Schuster
Lecturer	Prof. Dr. Chioncel (SS 2011)
Language	english
Curriculum inclosures	Master Materials Science (compulsory module), Master Advanced Functional Materials (compulsory module)

Lecture type and hours

Type	*SWS*	*Group size*
Lecture	3	40
Project	1	20

Work load (hours)

	Presence time	*Self-study*	*Total*
Lecture	45	30	75
Project	15	60	75
Presentation		30	30
			180

Credit points	6
Prerequisites acc. to the regulations of study	none
Recommended prerequisites	Basic knowledge of quantum mechanics, thermodynamics, and numerical methods as well as of a programming language
Acquired skills and knowledge	● The students know the principal concepts of thermodynamics and statistical physics as well as the numerical methods relevant in material science. ● The students are able to solve simple problems numerically. They are able to write the codes and to present the results. ● They have the expertise to find the numercal method approriate for the given problem and to judge the quality and validity of the numerical results. ● Integrated acquirement of soft skills: independent handling of hard- and software while using English documentations, ability to investigate abstract circumstances with the help of a computer and present the results in written and oral form, capacity for teamwork
Content	1. Introduction: operating systems, programming languages, data visualization tools 2. Basic numerical methods: interpolation, integration 3. Ordinary and Partial Differential Equations (e.g., diffusion equation, Schrödinger equation) 4. Molecular Dynamics 5. Monte Carlo Simulations
Requirements for credits	Project work in small groups, including a written summary of the results (ca. 10-20 pages) as well as an oral presentation
Media and methods	Blackboard presentation, occasionally supplemented by beamer or overhead presentations; in the project work with a computer in order to numerically implement a given concrete problem.

<tr><td>Prerequisites acc. to the regulations of study</td><td>none</td></tr>
<tr><td>Recommended prerequisites</td><td>Kenntnisse der Festkörperphysik, reziproker Raum</td></tr>
<tr><td>Acquired skills and knowledge</td><td>In diesem Kurs werden die wichtigsten Grundlagen und Verfahren der Rasterelektronenmikroskopie und Transmissionselektronenmikroskopie vermittelt. Hierzu werden in je zweiständigen Vorlesungen die theoretischen Grundlagen behandelt, die anschließend in praktischen Übungen an den Geräten vertieft werden. Die Studierenden werden in die Lage versetzt, Materialien mittels verschiedener elektronenmikroskopischer Techniken zu charakterisieren bzw. zu entscheiden, ob der Einsatz dieser Techniken für bestimmte Fragestellungen sinnvoll ist.</td></tr>
<tr><td>Content</td><td>SEM:

Lectures

1. Layout of Electron Microscopes and Electron Optical Components
2. Electron Solid Interactions
3. Contrast Formation in Scanning Electron Microscopy (SEM)
4. SE/BSE contrast
5. Electron Back Scattering Diffraction (EBSD)
6. Analytical techniques
7. Special Applications of SEM

Exercises

8. Sample preparation: cutting, polishing and etching
9. Introduction to the SEM instrument
10. Modes of imaging
11. Energy Dispersive X-ray Spectroscopy (EDX)

TEM:

Lectures

1. TEM specimen preparation techniques
2. Components of a TEM, principle lens design, lens aberrations
3. Electron diffraction: fundamentals
4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging
5. Bright field, dark field, weak beam dark field imaging of dislocations
6. Kinematical theory of electron wave propagation in crystals,
7. Howie Whelan equations, contrast of defects
8. High resolution TEM, lattice imaging of crystals
9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED)
10. Image simulation
11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM</td></tr>
</table>

	Exercises 12. Visit to TEM Labs, 13. preparation of Al samples, 14. preparation of Si plan view samples 15. TEM inspection of Al samples at TEM, 16. fundamental alignements 17. Recording of single crystalline diffraction patterns, indexing of diffraction spots, calibration of camera length & image rotation 18. Observation of stacking faults, thickness fringes, strain contrast in crystalline samples 19. Lattice imaging of a compound semiconductor 20. Observation of Kikuchi patterns 21. Recording of elemental maps
Requirements for credits	Bericht (jeweils ein Bericht pro Gruppe)

Module description	**Method Course: Methods in Biophysics**
Signature	MaMawi-24-06; MaAFM-24-06
Semester and recurrence	every term (upon agreement)
Responsible for module	Priv.-Doz. Thalhammer
Docent	Priv.-Doz. Thalhammer, Dr. Franke, Dr. Schmid (SS 2011)
language	german/english
Curriculum inclosures	Master Materials Science; Master Advanced Functional Materials, Master Physics

Lecture type and hours

Type	*SWS*	*Group size*
lecture	4	20-30
laboratory course	1	3

Work load (hours)

	Presence time	*Self-study*	*Total*
lecture	45	40	85
lab. course	40	15	55
exam		40	40
			180

Credit points	8
Prerequisites acc. to the regulations of study	attendence of the lecture Biophysics and Biomaterials
Recommended prerequisites	none
Acquired skills and knowledge	the students • know basic terms, concepts and phenomena in radiation biophysics • aquire basic knowledge of fluidic and biophysical phenomena on small length scales and applications and technologies of microfluidic analystical systems • learn skills in tissue culture and immun-histochemical staining procedures • learn skills in fluorescence and confocal scanning microsopy • learn skills to calculate fluidic problems on small length scales • learn skills to handle microfluidic channel systems
Content	practical laboratory course and experiments: 1. unit radiation biophysics a. concepts in radiation protection b. low-dose irradiation biophysics c. DNA repair dynamics of living cells after ionizing radiation d. confocal scanning laser microscopy 2. unit microfluidic a. microfluidic systems b. accoustic driven microfluidics c. calculation of microfluidic problems 3. unit analysis
Requirements for credits	work (lab) report
Media and methods	lecture: transparencies/chalkboard with additional media and experiments exercise: intensive mentoring in small groups private study
Literature	T. Herrmann, Klinische Strahlenbiologie – kurz und bündig, Elsevier Verlag, ISBN-13: 978-3-437-23960-1 J. Module description	**Method Course: X-ray and Neutron Diffraction Techniques**
Signature	MaMawi-24-12, MaAFM-24-12
Semester and recurrence	2nd semester / summer semester
Responsible for module	Prof. Dr. Scherer
Lecturer	Prof. Dr. Scherer, Dr. Eickerling (SS 2011)
Language	English
Curriculum inclosures	Master Materials Science; Master Advanced Functional Materials

Lecture type and hours	*Type*	*SWS*	*Group size*
	practical course	4	4
	lecture	2	8

Work load (hours)		*Presence time*	*Self-study*	*Total*
	practical course	60	90	150
	lecture	30	30	60
	examination		30	30
				240

Credit points	8
Prerequisites acc. to the regulations of study	none
Recommended prerequisites	The practical course is based on the module „Chemisch-Physikalisches Praktikum“
Acquired skills and knowledge	The students • gain basic practical knowledge on structural characterisation methods for single-crystalline and powder samples employing X-ray and neutron diffraction techniques • have the skill to, under guidance, perform phase-analyses and structure determinations • are competent to analyze the structure-property relationships of new materials.
Content	Subjects of the practical training and the accompanying lecture are the theoretical basics and the practical application of X-ray and neutron diffraction techniques: • Basic introduction to X-ray and neutron crystallography [4+2] • X-ray/neutron scattering [4+2] • Data collection and reduction techniques [4+2] • Symmetry and space group determination [4+2] • Structural refinements: (a) The Rietveld method (b) Difference Fourier synthesis [4+2] • Structure determination: (a) Patterson Method (b) Direct Methods [4+2] • Interpretation of structural refinement results [4+2] • Electronic structure determination and analysis [2+1]
Requirements for credits	1 written examination, approx. 90 min.
Media and methods	blackboard and beamer presentations, handouts
Literature	1. C. Hammond, The Basis of Crystallography and Diffraction, Oxford University Press Inc., New York, **2001**. 2. W. Clegg, A. J. Blake, R. O. Gould, P. Main, Crystal Structure Analysis, Principle and Practice, Oxford University Press Inc., New York, **2001**. 3. G. Modul description	**Method Course: Solid State Synthesis Lab**
Signature	MaMawi-24-13, MaAFM-24-13
Semester and recurrence	1st semester, 2nd semester
Responsible for module	Prof. Dr. Volkmer
Lecturer	Prof. Dr. Volkmer, Prof. Dr. Höppe, Dr. Bredenkötter (SS 2012)
language	English / German
Curriculum inclosures	Master Materials Science (elective module); Master Advanced Functional Materials (elective module)

Lecture type and hours	*type*	*SWS*	*Group size*
	Method course	6	1-2

Work load (hours)		*Presence time*	*Self-study*	*Total*
	Seminar	20	40	60
	Practical course	100	20	120
	Homework	-	60	60
				240

Credit points	8
Prerequisites acc. to the regulations of study	None
Recommended prerequisites	None
Acquired skills and knowledge	The students will learn how to ● develop functional materials based on organic/inorganic hybrid materials ● use modern preparation techniques (e.g. microwave synthesis) ● acquire competence to work under inert conditions (Schlenk technique) ● employ dedicated structure analytical methods
Content	Synthesis and characterization of functional materials according to following topics: ● porous functional materials (e.g. Metal-Organic Frameworks, Zeolites) ● metal-organic precursor compounds ● ceramics, luminescent compounds ● characterization methods (e.g. thermal analysis, spectroscopy (MS, FT-IR, UV/VIS), XRD, sorption methods)
Requirements for credits	Seminar talk, protocols
Media and methods	Presentation, publications, self-study
Literature	● Chemical databases ● Primary literature (scientific articles and reviews)
Further information	upon request

Recommended prerequisites	Lecture Porous Materials (MaMawi-41-18, MaAFM-41-18)
Acquired skills and knowledge	The students will learn how to ● use modern solid state preparation techniques (e.g. microwave synthesis) ● employ analytical methods dedicated to porous materials
Content	● Synthesis of porous functional materials (e.g. Metal-Organic Frameworks, Zeolites) ● Characterization methods - Thermal Analysis (TGA; EGA) - Structure Determination (XRD, VTXRPD) - Absorption and Diffusion (BET, BET isotherms) - Catalytic Properties (UV/VIS, thermal programmed oxidation and reduction (TPO and TPR) - Computational Modeling (calculation and predictions of framework structures)
Requirements for credits	Written examination (45 min) and written report (editing time 1 week)
Media and methods	Slices/blackboard, face to face tutorial, self-study
Literature	● Various. Will be provided by supervisor
Further information	upon request

3. Materials Science Seminar

Module description	**Introduction to Materials**				
Signature	MaMawi-31-01, MaAFM-31-01				
Semester and recurrence	1st semester / Winter term				
Responsible for module	Prof. Dr. Haider				
Lecturer					
Language	English				
Curriculum inclosures	Master of Science Materials Science; Master Advanced Functional Materials				
Lecture type and hours		*Type*	*SWS*	*Group size*	
		Seminar	2	20	
Work load (hours)		*Presence time*	*Self-study*	*Total*	
	Seminar	28	80	108	
Credit points	4				
Prerequisites acc. to the regulations of study	None				
Recommended prerequisites	Knowledge of basic materials science				
Acquired skills and knowledge	the students ● know the major principles, applications and processes of modern materials ● auqire the competence to compile knowledge for examples of material specific topics and to present this knowledge in given time to an audience				
Content	Varying topics for each year, giving an aoverview into scope, application, requirements and preparation of all types of modern materials				
Requirements for credits	presentation with term paper of 30-45 min				
Media and methods	Powerpoint presentation				
Literature	specific for each topic, to be gathered by the students				
Further information					

4. Specialization in Materials Science

Module description	**Biophysics and Biomaterials**
Signature	MaMawi-41-04, MaAFM-41-04, MaPhy-24-04
Semester and recurrence	2nd Semester / every term
Responsible for module	Priv.-Doz. Thalhammer
Docent	Priv.-Doz. Thalhammer, Dr. Franke, Dr. Schmid (SS 2011)
Language	english
Curriculum inclosures	Master Materials Science (elective module); Master Advanced Functional Materials; Master Physics

Lecture type and hours

Type	*SWS*	*Group size*
lecture	4	20-30
lab. course		

Work load (hours)

	Presence time	*Self-study*	*Total*
lecture	45	40	85
lab. course			
exam		40	40
			125

Credit points	6
Prerequisites acc. to the regulations of study	none
Recommended prerequisites	mechanics, thermo dynamics, statistical physics
Acquired skills and knowledge	the students ● learn basic terms, concepts and phenomena of biological physics ● learn models of the (bio)polymer-theory, microfluidic, radiation biophysics, nanobiotechnology, membranes and neuronal networks ● adapt skills in the independent processing of problems and deal with current literature. They will be able to translate a biological oberservation into a physical question.
Content	1. radiation biophysics 1.1 natural radiation 1.2 radiation in the low-dose regime 1.3 radiation protection 1.4 energy transfer in biological systems 1.5 biophysical concepts and biological response to ionizing radiation 2. microfluidics 2.1 Navier-Stokes equation 2.2 life at low Reynolds numbers 2.3 microfluidic phenomena 2.4 Lab-on-a-Chip systems 3. dynamic properties of polymers 3.1 the Rousse model 3.2 the Zimm model 3.3 reptation 3.4 viscoelastic networks 4. membranes 5.1 thermodynamics and fluctuation 5.2 thermodynamics of interfaces 5.3 phase transition – 2 state model 5.4 membrane elasticity 5. neuronal networks 7.1 ion channels 7.2 ion transport 7.3 electro physiology 7.4 dynamic neuronal processes 7.5 diffusion and random walk
Requirements for credits	1 written examination, 90 min

Media and methods	lecture: transparencies/chalkboard with additional media exercise: talks to current problems in biophysics
Literature	● P.-G. De Gennes, Scaling Concepts in Polymer Physics (Cornell University Press) ● L.D. Landau and E.M. Lifschitz, Vol. 5 and 7 (Harri Deutsch) ● P. Nelson, Biological Physics (W. H. Freeman) ● T. Heimburg, Thermal Biophysics of Membranes (Wiley-VCH) ● D. Boal, The Mechanics of the Cell (Cambridge University Press)
Further information	This lecture is part and requirement for the methodical course Methods in Biophysics. Lecture alone will be awarded 6 CP, Method Course 8 CP

Module description	**Chemische Physik I**
Signature	MaMawi-41-06, MaAFM-41-06, MaPhy-24-06, MaPhy-41-02, BaMawi-64-04
Semester and recurrence	jedes Wintersemester
Responsible for module	Prof. Dr. Scherer
Lecturer	Prof. Dr. Scherer, Dr. Eickerling
Language	Deutsch
Curriculum inclosures	Master Materialwissenschaften (Wahlpflichtmodul); Master AFM; Master Physik; Bachelor Materialwissenschaften

Lecture type and hours

Lehrform	*SWS*	*Gruppengröße*
Vorlesung	3	10-30
Übungen	1	10-30

Work load (hours)

	Präsenzzeit	*Eigenstudium*	*Gesamt*
Vorlesung	45	45	90
Übung	15	45	60
Klausur		30	30
			180

Credit points	6
Prerequisites acc. to the regulations of study	keine
Recommended prere-quisites	Es wird empfohlen, im Rahmen des Moduls „Physikalisches Fortgeschrittenen-praktikum“ die Versuche FP11 (IR-Spektroskopie) und FP17 (Raman-Spektroskopie) zu absolvieren.
Acquired skills and knowledge	Die Studierenden • kennen die Grundlagen der Extended Hückel Methode und der Dichtefunktio-nal Theorie. • verfügen über ein grundlegendes Verständnis der Gruppentheorie, können die aus Symmetrieüberlegungen gewonnenen Erkenntnisse im Rahmen der Schwingungs-, NMR- und UV/VIS-Spektroskopie anwenden, • und sind in der Lage, die grundlegenden geometrischen, elektronischen und magnetischen Eigenschaften von Übergangsmetallkomplexen zu interpretie-ren und vorherzusagen.
Content	1. Grundlagen Quantenchemischer Methoden [8] - Die Extended Hückel Methode (EHM) - Moderne quantenchemische Methoden der Chemischen Physik - Anwendung: Beispielrechnungen und Interpretation einfacher elektronischer Strukturen 2. Molekülsymmetrie und Gruppentheorie [7] - Symmetrieoperationen und Matrixdarstellungen - Punktgruppen - Reduzible und Irreduzible Darstellungen - Charaktertafeln - Anwendung: Infrarot- und Raman-Spektroskopie, NMR-Spektroskopie 3. Die Elektronische Struktur von Übergangsmetallkomplexen [7] - Ligandfeldtheorie und Angular-Overlap Modell (AOM) - Die physikalische Basis der Spektrochemischen Reihe - Molekülorbitaltheorie von Übergangsmetallkomplexen - Anwendung: UV/VIS-Spektroskopie, molekularer Magnetismus
Requirements for credits	Klausur, etwa 90 min
Media and methods	Tafelvortrag und Beamer-Präsentation
Literature	• J. Reinhold, Quantentheorie der Moleküle (Teubner) • H.-H. Schmidtke, Quantenchemie (VCH) • D. C. Harris und M. D. Bertolucci, Symmetry and Spectroscopy (Dover Publi-cations) • D. M. Bishop, Group Theory and Chemistry (Dover Publications) • J. K. Burdett, Chemical Bonds: A Dialog (Wiley) • F. A. Kettle, Physical Inorganic Chemistry (Oxford University Press) • A. Frisch, Exploring Chemistry with Electronic Structure Methods (Gaussian Inc. Pittsburg, PA)
Further information	Die Studenten erhalten die Möglichkeit im Rahmen der Übungen selbständig einfache EH, HF und DFT Rechnungen und Analysen elektronischer Strukturen

	von Molekülen auf einem Computer-cluster durchzuführen. The lecture „Chemische Physik I“ is one of the regular lectures of the physics masters program and is therefore only offered in German language.

Vorlesung	45	45	90
Übung	15	45	60
Klausur		30	30
			180

Credit points	6
Prerequisites acc. to the regulations of study	keine
Recommended prerequisites	Es wird dringend empfohlen, das Modul Chemical Physics I zuerst zu absolvieren.
Acquired skills and knowledge	Die Studierenden • kennen grundlegende quantenchemische Methoden der Chemischen Physik zur Interpretation elektronischer Strukturen in Molekülen und Festkörpern. • besitzen somit die Fertigkeit u.a. die Quantum Theorie der Atome in Molekülen (QTAIM) und gängige Elektronenlokalisierungsfunktionen (z. B. ELF) zur Analyse von Ladungsdungs- und Spindichteverteilungen anzuwenden. • sind kompetent selbstständig einfache quantenchemische Rechnungen unter Verwendung der Dichtefunktionaltheorie (DFT) durchzuführen und die elektronischen Strukturen funktioneller Moleküle und Materialien im Hinblick auf chemische und physikalische Eigenschaften zu interpretieren.
Content	1. Ladungsdichteverteilungen aus Experiment und Theorie [3] 2. Analyse der Topologie von Spin- und Ladungsdichteverteilungen [6] - Die Quantentheorie der „Atome in Molekülen“ (QTAIM) - Elektronenlokalisierungsfunktionen (ELF) und –Indikatoren (ELI) 3. Die Natur der chemischen Bindung [5] 4. Analyse von Wellenfunktionen mittels lokalisierter Orbitale [4] 5. Moderne quantenchemische Methoden: Konfigurationswechselwirkung [4]
Requirements for credits	Klausur, etwa 90 min
Media and methods	Tafelvortrag und Beamer-Präsentation

Prerequisites acc. to the regulations of study	none
Recommended prere-quisites	Basics of solid-state physics and quantum mechanics
Acquired skills and knowledge	The students ● know the basic properties and phenomena of magnetic materials and the most important methods and concepts for their description, like mean-field theory, exchange interactions and micro magnetic models ● have the ability to classify different magnetic phenomena and to apply the corresponding models for their interpretation ● have the competence independently to treat fundamental and typical topics and problems of magnetism.
Content	1. History, basics [1] 2. Magnetic moments, classical and quantum phenomenology [4] 3. Exchange interaction and mean-field theory [3] 4. Magnetic anisotropy and magnetoelastic effects [3] 5. Thermodynamics of magnetic systems and applications [2] 6. Magnetic domains und domain walls [2] 7. Magnetization processes und micro magnetic treatment [2] 8. AC susceptibility and ESR [2] 9. Spintransport / spintronics [2] 10. Recent problems of magnetism [2]
Requirements for cre-dits	Oral examination, 30 min.
Media and methods	Black board, overhead, and beamer presentation
Literature	● D. H. Martin, Magnetism in Solids (London Iliffe Books Ltd.) ● J. B. Goodenough, Magnetism and the Chemical Bond (Wiley) ● P. A. Cox, Transition Metal Oxides (Oxford University Press) ● C. Kittel, Solid State Phyics (Wiley) ● D. C. Mattis, The Theory of Magnetism (Wiley) ● G. L. Squires, Thermal Neutron Scattering (Dover Publications Inc.)

Module description	**Low Temperature Physics**
Signature	MaMawi-41-12, MaAFM-41-12, MaPhy-24-14
Semester and recurrence	2nd or 3rd Semester / every 2nd year
Responsible for module	Prof. Dr. Mannhart
Lecturer	
Language	English
Curriculum inclosures	Master Materials Science; Master Advanced Functional Materials; Master Physics (elective module)

Lecture type and hours

Type	*SWS*	*Group size*
Lecture	3	8-10
Exercices	1	8-10

Work load (hours)

	Presence time	*Self-study*	*Total*
Lecture	45	45	90
Exercices	15	45	60
Exam		30	30
			180

Credit points	6
Prerequisites acc. to the regulations of study	none
Recommended prere-quisites	Physik IV – Solid-state physics
Acquired skills and knowledge	The students ● know the basic properties of matter at low temperatures and the corresponding experimental techniques, ● have acquired the theoretical knowledge to perform low-temperature measurements, ● and know how to experimentally investigate current problems in low-temperature physics.
Content	● Introduction [1] ● Quantum Fluids [6] ○ Helium 4 ○ Helium 3 ● Quantum Solids [1] ● Bose-Einstein Condensate [2] ● Material Properties at Low Temperatures [6] ○ Heat capacity ○ Thermal conductivity ○ Electric conductivity ● Low temperature techniques [5] ○ Cooling ○ Temperature measurement ○ Design of cryogenic equipment ● Overview on state of current research [1]
Requirements for cre-dits	Oral examination, 30 min.
Media and methods	Lecture at blackboard, using transparencies and computer projection
Literature	● C. Enss, S. Hunklinger, Tieftemperaturphysik (Springer) ● F. Pobell, Matter and Methods at Low Temperatures (Springer)
Further information	-

Module description	**Spintronics**
Signature	MaMawi-41-13, MaAFM-41-13
Semester and recurrence	2nd or 3rd Semester / every 2nd year
Responsible for module	Prof. Dr. Brütting
Docent	Dr. Schmehl, Prof. Dr. Mannhart (WS 2011/12)
Language	English
Curriculum inclosures	Master Materials Science; Master Advanced Functional Materials

Lecture type and hours

Type	*SWS*	*Group size*
Vorlesung	4	15-25

Work load (hours)

	Presence time	*Self-study*	*Total*
Vorlesung	60	60	120
Klausur		60	60
			180

Credit points	6
Prerequisites acc. to the regulations of study	none
Recommended prerequisites	none
Acquired skills and knowledge	The students ● know the fundamental properties of magnetic materials, the basic spintronic effects, and the related device structures ● have acquired skills in identifying materials with respect to their applicability for spintronic devices ● and have the competence to deal with current problems in the field of semiconductor and metal based spintronics largely autonomous.
Content	● Introduction into magnetism [4] ● Basic spintronic effects and devices [4] ● Novel materials for spintronic applications [4] ● Spin-sensitive experimental methods [4] ● Semiconductor based spintronics [4]
Requirements for credits	1 written examination, 90 min
Media and methods	Blackboard and/or beamer presentation
Literature	● S. Bandyopadhyay, M. Cahay: *Introduction to Spintronics* (CRC Press, 2008)

Module description	**Materials Synthesis**
Signature	MaMawi-41-14, MaAFM-41-14, MaPhy41-05, MaPhy-42-07, BaMawi-64-09
Semester and recurrence	winter term / each year
Responsible for module	Prof. Dr. Scherer
Lecturer	
Language	English
Curriculum enclosures	Master Materials Science; Master Advanced Functional Materials; Master Physics; Bachelor Materials Science
Lecture type and hours	Lecture type and hours | Lecture type and hours
Work load (hours)	Work load (hours) | Work load (hours) | Work load (hours)
Credit points	6
Prerequisites acc. to the regulations of study	none
Recommended prerequisites	none
Acquired skills and knowledge	The students • know the basic approaches to synthesize functional materials and obey a fundamental knowledge of the respective microscopic reaction mechanisms involved. • obey the capability to classify materials with respect to their individual synthetic routes. • obey the competence to adopt established synthesis approaches for the design of new materials
Content	1. Introduction: examples of materials syntheses 2. Solid-solid reactions (ceramic methods) 3. Decomposition – and dehydratisation reactions 4. Intercalation reactions 5. Chemical transport 6. Chemical vapor deposition (CVD) 7. Aerosol processes 8. materials from solution and melts 9. Solvo-thermal synthesis 10. Sol-Gel processes 11. excursion: bio-inspired materials 12. excursion: combinatorical materials synthesis 13. excursion: ultrasonic synthesis
Requirements for credits	1 written examination, 90 min
Media and methods	Blackboard presentation, eventually with beamer projection techniques
Literature	1. U. Schubert, N. Hüsing, Synthesis of Inorganic Materials (Wiley-VCH) 2. D. W. Bruce, D. O'Hare, Inorganic Materials (John Wiley & Sons) 3. J.-P. Module description	**Seminar on Glass Physics**					
Signature	MaMawi-41-16, MaAFM-41-16, MaPhy-31-09					
Semester and recurrence	2nd semester / each summer semester					
Responsible for module	PD Dr. Lunkenheimer					
Lecturer	PD Dr. Lunkenheimer (SS 2011)					
Language	English					
Curriculum inclosures	Master Materials Science; Master Advanced Functional Materials; Master Physics					
Lecture type and hours		*Type*	*SWS*	*Group size*		
		Seminar	2	10-12		
Work load (hours)			*Presence time*	*Self-study*	*Total*	
		Seminar	30	90	120	
Credit points	4					
Prerequisites acc. to the regulations of study	none					
Recommended prerequisites	Basic knowledge of solid-state physics					
Acquired skills and knowledge	• The students know the phenomenology of the glass state and the glass transition, the material properties of glasses, their technical applications and the most important models of glassy matter. They have acquired knowledge concerning the preparation of scientific presentations. • They are able to independently acquaint themselves with a physical or material-science topic using various sources of information. They are capable of preparing a graphically attractive scientific talk using modern, computer-based presentation techniques. They are able to present a talk in a clear and informative way, adhering to a fixed time limit. • The students have the competence to distinguish between important and less important contents when preparing a scientific talk and to edit and restructure the chosen contents in order to provide a didactically sound presentation.					
Content	The following topics are treated: - Technical glasses - Polymers - Metallic glasses - Relaxation phenomena - Models of the glass transition - Aging phenomena in glasses - Non-structural glasses - Ionic conductivity - Electrons in glasses					
Requirements for credits	Talk with discussion, about 60 min					
Media and methods	Beamer presentation

		lecture	2	30	
		exercise	2	30	
Work load (hours)			*Presence time*	*Self-study*	*Total*
		lecture	20	20	40
		exercise	20	80	100
		written examen		40	40
					180
Credit points	6				
Prerequisites acc.to the regulations of study	None				
Recommended prerequisites	None				
Acquired skills and knowledge	The students know the basics of geographic distribution and the technical relevancy of different resources like energy sources and metals. Furthermore, the students know risk management methods, which are used to identify, measure and manage resource price risks. For this purpose, resource scarcity indicators, risk measures and instruments for risk protection are being presented, which enable the students to make economically well-grounded decisions in dealing with resources. Moreover, the students know how resource-based strategies with the help of environmental management contribute to environmental risk management. All topics are being illustrated with examples (from practical projects).				
Content	- Introduction (global resource consumption) - Overview of resource types - Definition of mineral resources - Introduction to resource management - Identification of resource price risks - Measurement of resource price risks - Management of resource price risks - Introduction in basics of environmental management - Corporate environmental management - Economical closed-loop systems				
Requirements for credits	One written exam, 60 min, and practise sheets				
Media and methods	Slides/blackboard with the help of other media

Credit points	6
Prerequisites acc. to the regulations of study	
Recommended prerequisites	Solid knowledge in (solid state) Physics, Chemistry and Materials Science, both experimentally and theoretically
Acquired skills and knowledge	The students ● know the basic terms, skills and concepts to pursuit a real research project in the existing laboratories within the research groups, ● experience the day to day life in a research group from within ● prepare themselves to conduct a research project during their Masters thesis.
Content	Experimental or theoretical work in a laboratory / research group in the Institute of Physics. Has to be conducted within 3 months.
Requirements for credits	1 written report, editing time 2 weeks
Media and methods	Face to face tutoring
Literature	● various
Further information	-

5. Final Thesis and Colloquium

(1) The finals are part of the Master's examination and are ment to show that the candidate is in a position to solve a problem from the program independently according to scientific methods. The finals consist of the the written thesis and a colloquium in the form of an oral examination after submitting the thesis. For the thesis, 26 credit points are awarded and for the final colloquium 4 points.

(2) The processing time for the thesis between reception of the topic and submission of the thesis shall not exceed 6 months. The topic can be returned only once and only for good reasons within a period of four weeks after the issue of the topic. Consent of the Chairperson of the Examination Committee is required. If the thesis work needs to be redone, a change of the topic is not admitted.

(3) At the request of the candidate, and in exceptional cases, the processing time may be extended by a maximum of eight weeks. Again, the consent of the committee is required. Periods of medical disability (Doctor’s testimony), or such for which the candidate cannot be held responsible, should be not counted towards the processing time. Here, too, the decision is with the examination board. Master thesis not being submitted in time will be assessed with "not sufficient".

(4) Working on the Masters thesis can only be started after the successful acquisition of at least 60 credit points from the module area 1 thru 5.

(5) The master's thesis should be written in English. Exceptions can only be given after consultation and decision of the examination board.

(6) The final colloquium is usually held during a period of four to six weeks after submitting the thesis. Subjects of the colloquium are the basic content of the courses in the Master program "Advanced Functional Materials well as the written thesis. The duration of the colloquium should not be less than 45 minutes and not exceeding 75 minutes. The colloquium starts with a presentation of approximately 15 minutes duration on the contents of the final work. A colloquium graded "insufficient" can be repeated within six months.

(7) A final Masters thesis graded with an "insufficient" may be repeated once. In this case, the topic has to be modified with respect to the original one.
