I. Goals and Profile of the FAME Masters program.....	2
II. Official documents.....	3
III. Module summary.....	4
IV. Module syllabi	
Module area 1 : Introduction to Materials Science.....	5
Module area 2 : Methods in Materials Science.....	11
Module area 3 : Materials Science Seminar.....	28
Module area 4 : Specialization in Materials Science.....	34
Module area 5 : Finals, Thesis.....	46

I. Objectives and Profile of the Program

Priorities in the activity of the materials scientist are applied research in science and technology, the development of modern materials, supervision of production processes and the technical distribution of materials. Also, the program aims towards well trained graduates to perform organizational, planning and management duties in research institutes, industry and public administration.

The structure of typical operational areas of material scientists requires a broad knowledge and education in natural sciences that will enable him / her to solve new and not yet resolved problems of applied research and technology.

A solid background in the manufacture and processing, characterization, development and use of new materials is a key parameter in the education. In addition to good knowledge of the physical and chemical principles, materials scientists have to have a profound background of the various classes of materials and must be well acquainted with the fundamentals and problems of materials technology. For this purpose he / she must have a thorough knowledge of various processing, fabrication and analysis methods and has to be able to recognize the essentials.

The Masters degree in Materials Science is ment to supplement the Bachelor's degree in the form of an in-depth recessment to achieve a second professional and qualifying status, and provides the opportunity to work and excel in an experimental environment, general materials science, and selected specialty areas. It provides important practice skills to pursue academic work in industrial or governmental research and development.

The Masters degree provides a professional and qualifying education in material science, usually based upon a successful Bachelor's degree. Holding a Master's degree, it is secured that the candidate is in power of an enhanced expertise in material sciences and has the ability, by using modern scientific methods to tackle materials Science problems independently and efficiently.

The master program consists of the following module groups. The respective Credit Points (LP) and the respective work load hours (SWS) are indicated.

Module		SWS	CP
1	Fundamentals of Materials Science	15	23
2	Methods in Materials Science	23	33
3	Materials Science Seminar	2	4
4	Specialization in Materials Science	20	30
5	Finals		30

The total of credentials is 120 credit points.

The anticipated learning outcomes in the Masters program go far beyond the ones of the Bachelor's degree program. The following technical and social knowledge, skills and competencies are essential for the professional qualification of the Masters Graduates:

- The graduates have sound working knowledge of scientific fundamentals of materials science, good knowledge of mathematics (in terms of its application to scientific problems), and practical skills in modern materials research. Based on this knowledge, they are able to identify relations between materials science and various economic issues.

- Generally, they are well prepared for demanding tasks, whose processing goes well beyond a schematic application of existing concepts only. They are moreover able to analyze and deliberately modify the tasks according to the respective needs. They have acquired a wide range of material knowledge, scientific methods and techniques and are qualified to use these accordingly and well adapted to the specific problem.
- The graduates have an understanding of the impact of their activities as material scientists in a company, including resource and environmental issues and are aware of their own scientific and social responsibilities.
- The graduates are able to judge and understand the effects of their actions as materials scientists and to estimate their impact on social, environmental and society issues. They have acquired an awareness for resource management and smart resource handling.
- The program graduates are able to work in a variety of scientific and technical surroundings to organize and carry out projects in several different areas. They are familiar with the learning strategies that lead them and others to professional and social competences and they know how to make this an ongoing and deepening process.
- They are able to appropriately present both their own results as well as general questions of modern materials research in front of professional colleagues as well as to the broader public.
- They are prepared for flexible use in various professional fields around and in particular on the work in an occupational or academic field. Successful graduates are well prepared to follow an appropriate PhD program.

Social skills are acquired primarily integrated into the specialized modules, such as team skills in exercises and in internships and project organization during the final thesis work. The Master's degree Materials Science is an international program, the teaching language of the courses is English.

II. Official Documents

The international Masters program, Materials Science' was officially opened to students in the winter term 2003/04. The actual examination regulation was enacted on 25. July 2007. It may be downloaded at

<http://www.zv.uni-augsburg.de/de/sammlung/download/>

or

<http://www.physik.uni-augsburg.de/studium/>

III. Module summary

The responsible [module appointees](#) are named in brackets.

Abbreviations:

SWS = Semester work load, CP = credit points
 V = lecture, Ü = exercise, P = Prakticum, S = Seminar

Module Group	Module	Signature	SWS	CP
1 Basics of Materials Science	Compulsory Modules:			
	Materials Physics I (Stritzker)	MaMawi-11-01	3 V, 1 Ü	6
	Materials Physics II (Stritzker)	MaMawi-12-01	3 V, 1 Ü	6
	Materials Chemistry (Volkmer)	MaMawi-13-01	3 V, 1 Ü	6
	Physics of Surfaces and Interfaces (Horn)	MaMawi-14-01	3 V, 1 Ü	6
subtotal			16	24
2 Methods in Materials Science	Compulsory Modules:			
	Characterization of materials (Haider)	MaMawi-21-01	4 V	6
	Processing of materials (Haider)	MaMawi-22-01	4 V	6
	Theoretical Concepts and Simulation (Schuster)	MaMawi-23-01	3 V, 1 Ü	6
	Elective Modules:			
	Method Course: Electron Microscopy (Haider)	MaMawi-24-02	4 V, 2 P	8
	Method Course: Electronics for Physicists and Materials Scientists (Wixforth)	MaMawi-24-04	3 V, 3 P	8
	Method Course: Materials Synthesis (Scherer)	MaMawi-24-05	2 V, 4 P	8
	Method Course: Methods in Biophysics (Thalhammer)	MaMawi-24-06	4 V, 1 P	8
	Method Course: Optical Properties of Solids (Loidl)	MaMawi-24-07	2 V, 4 P	8
	Method Course: Spectroscopy on Condensed Matter (Loidl)	MaMawi-24-09	2 V, 4 P	8
	Method Course: Practical laboratory work (Kuntscher)	MaMawi-24-10	N/A	8
	Method Course: Thin Film Analysis with Ion Beams (Karl)	MaMawi-24-11	2 V, 4 P	8
	Method Course: X-ray and Neutron Diffraction Techniques (mit Exkursion) (Scherer)	MaMawi-24-12	2 V, 4 P	8
Method Course Solid State Synthesis Lab (Volkmer)	MaMawi-24-13	2 V, 4 P	8	
subtotal			22	32
3 Materials Science Seminar	Compulsory Module:			
	Introduction to Materials (Haider)	MaMawi-31-01	2 S	4
subtotal			2	4

4 Specialization in Materials Science	5 Elective Courses according to postings of examination board			
	Physics and Technology of Semiconductor Devices (Wixforth)	MaMawi-41-01	3 V, 1 Ü	6
	Nanostructures / Nanophysics (Wixforth)	MaMawi-41-02	3 V, 1 Ü	6
	Electronics for Physicists and Materials Scientists (Wixforth)	MaMawi-41-03	3 V, 1 P	6
	Biophysics and Biomaterials (Thalhammer)	MaMawi-41-04	4	6
	Solid State Spectroscopy with Synchrotron Radiation (Kuntscher)	MaMawi-41-05	3 V, 1 Ü	6
	Chemische Physik I (Scherer)	MaMawi-41-06	3 V, 1 Ü	6
	Chemische Physik II (Scherer)	MaMawi-41-07	3 V, 1 Ü	6
	Ion-Solid Interaction (Karl)	MaMawi-41-08	3 V, 1 Ü	6
	Physics of Thin Films (Brütting)	MaMawi-41-09	4 V	6
	Organic Semiconductors (Brütting)	MaMawi-41-10	4 V	6
	Magnetism (Krug von Nidda)	MaMawi-41-11	3 V, 1 Ü	6
	Low Temperature Physics (Mannhart)	MaMawi-41-12	3 V, 1 Ü	6
	Spintronics (Mannhart)	MaMawi-41-13	4 V	6
	Materials Synthesis (Scherer)	MaMawi-41-14	3 V, 1 Ü	6
	Oxidation and Corrosion (Haider)	MaMawi-41-15	4 V, 1 Ü	6
	Seminar on Glass Physics (Lunkenheimer)	MaMawi-41-16	2 S	4
	Advanced Solid State Materials (Volkmer)	MaMawi-41-17	3 V, 1 Ü	6
Porous Materials (Volkmer)				
Subtotal			20	30
5 Finals	Masters Thesis (6 months) (Wixforth)	MaMawi-91-01		26
	Final Colloquium (Wixforth)	MaMawi-91-02		4
	subtotal			
Total				120

IV. Module descriptions

1. Basics of Materials Science

Modul description	Material Physics I			
Signature	MaMawi-11-01, MaAFM-11-01			
Semester and recurrence	1. Semester/ every year in winter semester			
Responsible for module	Prof. Dr. Stritzker			
Lecturer				
Language	Englisch			
Curriculum inclosures	Master Materials Science, Master Advanced Functional Materials			
Lecture type and hours	<i>Type</i>	<i>SWS</i>	<i>Group size</i>	
	lecture	3	20	
	exercise	1	20	
Work load (hours)		<i>Presence time</i>	<i>Self-study</i>	<i>Total</i>
	lecture	45	55	100
	exercise	15	35	50
	written examen		30	30
				180
Credit points	6			
Prerequisites acc.to the regulations of study	None			
Recommended prerequisites	None			
Acquired skills and knowledge	<p>The students</p> <ul style="list-style-type: none"> • know the basic terms of solid state and semi-conductor physics like electrical band structure, doping, charge carrier stastics or optical properties. • are capable to apply derived approximations as the effective mass or quasi Fermi-levels to describe the basic characteristics of semi-conductive materials. • have the competence to apply these concepts for the description of semiconducting components as diodes, transistors and optical components and to describe their functionality. • know the most important technological procedures for manufacturing of micro- and nanoelectronic components. 			
Content	<p>IA Preliminaries</p> <p>IB Electrons in solids IB 1 Free Electron Gas IB 2 Reciprocal Lattice IB 3 Band Structure</p> <p>IC Phonons IC 1 Lattice Vibrations</p> <p>ID General Properties of Materials ID 1 Electrical Conductivity ID 2 Thermal Properties ID 3 Optical Properties</p> <p>II Metals</p> <p>III Semiconductors</p> <ul style="list-style-type: none"> • Pure SC • Intrinsic Conditions • SC in Equilibrium • Doping 			

	<ul style="list-style-type: none"> • Heterogeneous Structures • Metal-SC Interfaces, Schottky Contact • pn-junctions • Devices • Diode • Transistor • Solar cell • Technology <p>IV Dielectric Solids, Optical Properties</p> <ul style="list-style-type: none"> • Introduction, Phenomenology • Polarization • Propagation of EM waves in Solids • Ferro electricity • Optically active point defects
Requirements for credits	One written exam, 90 min, and one seminar presentation (20 min)
Media and methods	Lecture: slides/blackboard with help of other media and experiments Tutorial: intensive support in small groups, seminar presentations by students Self-study
Literature	<p>R.E. Hummel: <i>Electronic Properties of Materials</i> Springer 2001 (UP1000 H925)</p> <p>G. Burns: <i>Solid State Physics</i> Academic Press 1990 (UP1000 B967)</p> <p>N. W. Semester and recurrence	second semester / each summer semester				
Responsible for module	Dr. Schuster				
Lecturer	Prof. Dr. Chioncel (SS 2011)				
Language	english				
Curriculum inclosures	Master Materials Science (compulsory module), Master Advanced Functional Materials (compulsory module)				
Lecture type and hours		<i>Type</i>	<i>SWS</i>	<i>Group size</i>	
		Lecture	3	40	
		Project	1	20	
Work load (hours)			<i>Presence time</i>	<i>Self-study</i>	<i>Total</i>
		Lecture	45	30	75
		Project	15	60	75
		Presentation		30	30
					180
Credit points	6				
Prerequisites acc. to the regulations of study	none				
Recommended pre-requisites	Basic knowledge of quantum mechanics, thermodynamics, and numerical methods as well as of a programming language				
Acquired skills and knowledge	<ul style="list-style-type: none"> • The students know the principal concepts of thermodynamics and statistical physics as well as the numerical methods relevant in material science. • The students are able to solve simple problems numerically. They are able to write the codes and to present the results. • They have the expertise to find the numerical method appropriate for the given problem and to judge the quality and validity of the numerical results. • Integrated acquirement of soft skills: independent handling of hard- and software while using English documentations, ability to investigate abstract circumstances with the help of a computer and present the results in written and oral form, capacity for teamwork 				
Content	<ol style="list-style-type: none"> 1. Introduction: operating systems, programming languages, data visualization tools 2. Basic numerical methods: interpolation, integration 3. Ordinary and Partial Differential Equations (e.g., diffusion equation, Schrödinger equation) 4. Molecular Dynamics 5. Monte Carlo Simulations 				
Requirements for credits	Project work in small groups, including a written summary of the results (ca. 10-20 pages) as well as an oral presentation				
Media and methods	Blackboard presentation, occasionally supplemented by beamer or overhead presentations; in the project work with a computer in order to numerically implement a given concrete problem.				
Literature	<ol style="list-style-type: none"> 1. Tao Pang, An Introduction to Computational Physics (Cambridge University Press) 2. J. M. Thijssen, Computational Physics (Cambridge University Press) 3. Koonin, Meredith, Computational Physics (Addison-Weseley) 4. D. C. Rapaport, The Art of Molecular Dynamics Simulation, (Cambridge University Press) 5. W. H. Press et al, Numerical Recipes (Cambridge University Press)

Curriculum inclosures	Master of Science Materials Science; Master Advanced Functional Materials			
Lecture type and hours	<i>Type</i>	<i>SWS</i>		<i>Group size</i>
	Methodenkurs	6		3-4
Work load (hours)		<i>Presence time</i>	<i>Self-study</i>	<i>Total</i>
	Vorlesung	24	48	72
	Praktikum	48	48	96
	Protokoll	-	50	50
				218
Credit points	8			
Prerequisites acc. to the regulations of study	none			
Recommended prerequisites	Kenntnisse der Festkörperphysik, reziproker Raum			
Acquired skills and knowledge	<p>In diesem Kurs werden die wichtigsten Grundlagen und Verfahren der Raster-elektronenmikroskopie und Transmissionselektronenmikroskopie vermittelt. Hierzu werden in je zweistündigen Vorlesungen die theoretischen Grundlagen behandelt, die anschließend in praktischen Übungen an den Geräten vertieft werden. Die Studierenden werden in die Lage versetzt, Materialien mittels verschiedener elektronenmikroskopischer Techniken zu charakterisieren bzw. zu entscheiden, ob der Einsatz dieser Techniken für bestimmte Fragestellungen sinnvoll ist.</p>			
Content	<p>SEM:</p> <p>Lectures</p> <ol style="list-style-type: none"> 1. Layout of Electron Microscopes and Electron Optical Components 2. Electron Solid Interactions 3. Contrast Formation in Scanning Electron Microscopy (SEM) 4. SE/BSE contrast 5. Electron Back Scattering Diffraction (EBSD) 6. Analytical techniques 7. Special Applications of SEM <p>Exercises</p> <ol style="list-style-type: none"> 8. Sample preparation: cutting, polishing and etching 9. Introduction to the SEM instrument 10. Modes of imaging 11. Energy Dispersive X-ray Spectroscopy (EDX) <p>TEM:</p> <p>Lectures</p> <ol style="list-style-type: none"> 1. TEM specimen preparation techniques 2. Components of a TEM, principle lens design, lens aberrations 3. Electron diffraction: fundamentals 4. Contrast formation at bright field, dark field, weak beam dark field, and many beam conditions, „chemical“ imaging 5. Bright field, dark field, weak beam dark field imaging of dislocations 6. Kinematical theory of electron wave propagation in crystals, 7. Howie Whelan equations, contrast of defects 8. High resolution TEM, lattice imaging of crystals 9. Advanced diffraction techniques: Kikuchi patterns, HOLZ lines and Convergent Beam Diffraction (CBED) 10. Image simulation 11. Analytical TEM: Electron energy loss spectroscopy & energy filtered TEM 			

	<p>Exercises</p> <ol style="list-style-type: none"> 12. Visit to TEM Labs, 13. preparation of Al samples, 14. preparation of Si plan view samples 15. TEM inspection of Al samples at TEM, 16. fundamental alignements 17. Recording of single crystalline diffraction patterns, indexing of diffraction spots, calibration of camera length & image rotation 18. Observation of stacking faults, thickness fringes, strain contrast in crystalline samples 19. Lattice imaging of a compound semiconductor 20. Observation of Kikuchi patterns 21. Recording of elemental maps
Requirements for credits	Bericht (jeweils ein Bericht pro Gruppe)
Media and methods

		Lecture	30	30	60
		Exam		30	30
					240
Credit points	8				
Prerequisites acc. to the regulations of study	none				
Recommended prerequisites	The practical course is based on the modules Chemistry I, Chemistry II, Chemistry III and the practical course in physical chemistry				
Acquired skills and knowledge	The student				
	<ul style="list-style-type: none"> • Gains basic practical knowledge about chemical materials synthesis and analytical methods (e.g. ICP/EA/REM-EDX). This includes the characterization via X-ray diffraction and spectroscopic techniques (e.g. IR/NMR) as well as physical methods (e.g. thermoelectric properties, magnetism). • Possesses the ability to perform materials syntheses under instruction • is able to choose the appropriate characterization method for the materials. 				
Content	<p>Content of the practical course and the lecture are the theoretical basics, the synthesis and characterisation of the following functional materials:</p> <ul style="list-style-type: none"> • Organic Polymers [4+2] • Zeolites and mesoporous Materials [4+2] • Porous Coordination polymers [4+2] • Ionic liquids [4+2] • Bio materials [4+2] • Oxides „Sol-Gel Processing and ceramic Methods“ [4+2] • Lower dimensional structure materials [4+2] • Ferrofluides [2+1] 				
Requirements for credits	1 written examination, 90 min.				
Media and methods	Black board presentation, Beamer presentation, Handouts				
Literature	<ol style="list-style-type: none"> 1. U. Schubert, N. Hüsing, Synthesis of Inorganic Materials (Wiley-VCH) 2. D. W. Bruce, D. O'Hare, Inorganic Materials (John Wiley & Sons) 3. J.-P. Further information	-				

Module description	Oxidation and Corrosion				
Signature	MaMawi-41-15, MaAFM-41-15				
Semester and recurrence	3. / winter term				
Responsible for module	Prof. Dr. Haider				
Lecturer					
Language	English				
Curriculum inclosures	Master of Science Materials Science, Master Advanced Functional Materials				
Lecture type and hours		<i>Type</i>	<i>SWS</i>	<i>Group size</i>	
		Vorlesung	4	20-40	
		Practical Exercises	1	3	
Work load (hours)			<i>Presence time</i>	<i>Self-study</i>	<i>Total</i>
		Vorlesung	60	60	120
		Practic.	8	40	48
					168
Credit points	6				
Prerequisites acc. to the regulations of study	none				
Recommended prerequisites	Gute Kenntnisse der Materialwissenschaften, Grundkenntnisse der physik. Chemie				
Acquired skills and knowledge	<p>Die Studierenden</p> <ul style="list-style-type: none"> • lernen die elementaren Grundlagen, Vorgänge und Erscheinungsformen von Korrosionsprozessen kennen • erarbeiten sich speziellere praktische Kenntnisse für ein Beispiel einer Korrosionsform 				
Content	<p>Introduction Review of thermodynamics Chemical equilibria Electrochemistry Electrode kinetics High temperature oxidation Localized corrosion Shallow pit corrosino Pitting corrosion Crevice corrosion Intercrystalline corrosion Stress corrosion cracking Fatigue corrosion Erosion corrosion Galvanic corrosion Water and seawater corrosion Corrosion monitoring Corrosion properties of specific materials Specific corrosion problems in certain branches Oil and Gas industry Automobile industry Food industry corrosion protection Passive layers Reaction layers (Diffusion layers ...) Coatings (organic, inorganic) Cathodic, anodic protection Inhibitors</p>				
Requirements for credits	Prakt. Übung, Vortrag und Ausarbeitung 30-45 min				
Media and methods	Powerpoint presentation				

Literature	6. Schütze: Corrosion and Environmental Degradation
Further information	

Module description	Seminar on Glass Physics				
Signature	MaMawi-41-16, MaAFM-41-16, MaPhy-31-09				
Semester and recurrence	2. semester / each summer semester				
Responsible for module	PD Dr. Lunkenheimer				
Lecturer	PD Dr. Lunkenheimer (SS 2011)				
Language	English				
Curriculum inclosures	Master Materials Science; Master Advanced Functional Materials; Master Physics				
Lecture type and hours		<i>Type</i>	<i>SWS</i>	<i>Group size</i>	
		Seminar	2	10-12	
Work load (hours)			<i>Presence time</i>	<i>Self-study</i>	<i>Total</i>
		Seminar	30	90	120
Credit points	4				
Prerequisites acc. to the regulations of study	none				
Recommended prerequisites	Basic knowledge of solid-state physics				
Acquired skills and knowledge	<ul style="list-style-type: none"> • The students know the phenomenology of the glass state and the glass transition, the material properties of glasses, their technical applications and the most important models of glassy matter. They have acquired knowledge concerning the preparation of scientific presentations. • They are able to independently acquaint themselves with a physical or material-science topic using various sources of information. They are capable of preparing a graphically attractive scientific talk using modern, computer-based presentation techniques. They are able to present a talk in a clear and informative way, adhering to a fixed time limit. • The students have the competence to distinguish between important and less important contents when preparing a scientific talk and to edit and restructure the chosen contents in order to provide a didactically sound presentation. 				
Content	The following topics are treated: <ul style="list-style-type: none"> - Technical glasses - Polymers - Metallic glasses - Relaxation phenomena - Models of the glass transition - Aging phenomena in glasses - Non-structural glasses - Ionic conductivity - Electrons in glasses 				
Requirements for credits	Talk with discussion, about 60 min				
Media and methods	Beamer presentation				
Literature	<ul style="list-style-type: none"> • H. Scholze, Glas (Vieweg) • S.R. Elliott, Physics of Amorphous Materials (Longman) • R. Zallen, The Physics of Amorphous Solids (Wiley) • J. Zarzycki (ed.), Material Science and Technology, Vol. 9: Glasses and Amorphous Materials (VCH) • J. Zarzycki, Glasses and the Vitreous State (Cambridge University Press)

Modul description	Advanced Solid State Materials				
Signature	MaMawi-41-17, MaAFM-41-17, MaPhy-41-07				
Semester and recurrence	2 nd semester / each summer semester				
Responsible for module	Prof. Dr. Volkmer				
Lecturer	Prof. Dr. Höpfe				
Language	English				
Curriculum inclosures	Master Materials Science (elective module); Master Advanced Functional Materials (elective module); Master Physics (elective module);				
Lecture type and hours		<i>type</i>	<i>SWS</i>	<i>Group size</i>	
		lectures	3	24	
		tutorial	1	24	
Work load (hours)			<i>Presence time</i>	<i>Self-study</i>	<i>Total</i>
		lectures	45	40	85
		tutorial	15	30	45
		homework		50	50
					180
Credit points	6				
Prerequisites acc. to the regulations of study	none				
Recommended prerequisites	Contents of modules Chemistry I and Solid State Chemistry (Bachelor)				
Acquired skills and knowledge	<p>The students</p> <ul style="list-style-type: none"> are aware of correlations between composition, structures and properties of functional materials acquire skills to predict the properties of chemical compounds, based on their composition and structures gain competence to evaluate the potential of functional materials for future technological developments will know how to measure the properties of these materials. 				
Content	<ul style="list-style-type: none"> luminescent materials [5] pigments [3] ion conductors [3] magnetic/data storage materials [3] thermoelectric materials [2] catalysts [4] hard materials [2] 				
Requirements for credits	1 written examination, 90 min.				
Media and methods	blackboard, beamer presentation occasionally				
Literature	<ul style="list-style-type: none"> A. West, Solid State Chemistry and Its Applications L. Smart, E. Moore, Solid State Chemistry Scripts Solid State Chemistry and Chemistry I and II 				
Further information	-				

Module description	Porous Materials				
Signature	MaMawi-41-18, MaPhy-41-08, MaPhy-42-08, MaAFM-41-18				
Semester and recurrence	2 nd semester (each summer semester)				
Responsible for module	Prof. Dr. Volkmer				
Lecturer	Prof. Dr. Volkmer (SS 2011)				
Language	English				
Curriculum inclosures	Master Materials Science (elective module); Master Advanced Functional Materials (elective module); Master Physics with minor subject Chemistry (elective module)				
Lecture type and hours		<i>Type</i>		<i>SWS</i>	<i>Group size</i>
		lectures		3	20-30
		tutorial		1	20-30
Work load (hours)			<i>Presence time</i>	<i>Self-study</i>	<i>Total</i>
		lectures	45	30	75
		tutorial	15	60	75
		homework		30	30
					180
Credit points	6				
Prerequisites acc. to the regulations of study	none				
Recommended prerequisites	Participation in the Course Materials Chemistry: MaPhy-41-04, MaPhy-42-06, MaMawi-13-01, MaAFM-13-01.				
Acquired skills and knowledge	<ul style="list-style-type: none"> • The students shall acquire knowledge about design principles and synthesis of porous functional materials • Broaden their capabilities to characterize porous solid state materials with special emphasis laid upon sorption and thermal analysis • become introduced into typical technical applications of porous solids 				
Content	[double hours] <ol style="list-style-type: none"> 1. Overview and historical developments [1] 2. Structural families of porous frameworks [2] 3. Structure Determination and Computer Modelling [3] 4. Synthesis strategies [2] 5. Adsorption and diffusion [3] 6. Thermal analysis methods [3] 7. Catalytic properties [3] 8. Advanced applications and current trends [1] 				
Requirements for credits	1 written examination, 90 min				
Media and methods	Beamer presentation, blackboard (occasionally)				
Literature	<ul style="list-style-type: none"> • Paul A. Wright, Microporous Framework Solids (RSC Materials Monographs, 2008) As well as selected reviews and journal articles cited on the slides				
Further information	Subsequent to the lecture course, the students can take part in a hands-on method course („Solid State Synthesis”, MaMawi-24-09, MaAFM-24-09) to practice their knowledge				

5. Final Thesis and Colloquium

(1) The finals are part of the Master's examination and are meant to show that the candidate is in a position to solve a problem from the program independently according to scientific methods. The finals consist of the written thesis and a colloquium in the form of an oral examination after submitting the thesis. For the thesis, 26 credit points are awarded and for the final colloquium 4 points.

(2) The processing time for the thesis between reception of the topic and submission of the thesis shall not exceed 6 months. The topic can be returned only once and only for good reasons within a period of four weeks after the issue of the topic. Consent of the Chairperson of the Examination Committee is required. If the thesis work needs to be redone, a change of the topic is not admitted.

(3) At the request of the candidate, and in exceptional cases, the processing time may be extended by a maximum of eight weeks. Again, the consent of the committee is required. Periods of medical disability (Doctor's testimony), or such for which the candidate cannot be held responsible, should be not counted towards the processing time. Here, too, the decision is with the examination board. Master thesis not being submitted in time will be assessed with "not sufficient".

(4) Working on the Masters thesis can only be started after the successful acquisition of at least 60 credit points from the module area 1 thru 5.

(5) The master's thesis should be written in English. Exceptions can only be given after consultation and decision of the examination board.

(6) The final colloquium is usually held during a period of four to six weeks after submitting the thesis. Subjects of the colloquium are the basic content of the courses in the Master program "Advanced Functional Materials" as well as the written thesis. The duration of the colloquium should not be less than 45 minutes and not exceeding 75 minutes. The colloquium starts with a presentation of approximately 15 minutes duration on the contents of the final work. A colloquium graded "insufficient" can be repeated within six months.

(7) A final Masters thesis graded with an "insufficient" may be repeated once. In this case, the topic has to be modified with respect to the original one.
